RO Credit Management & Reports

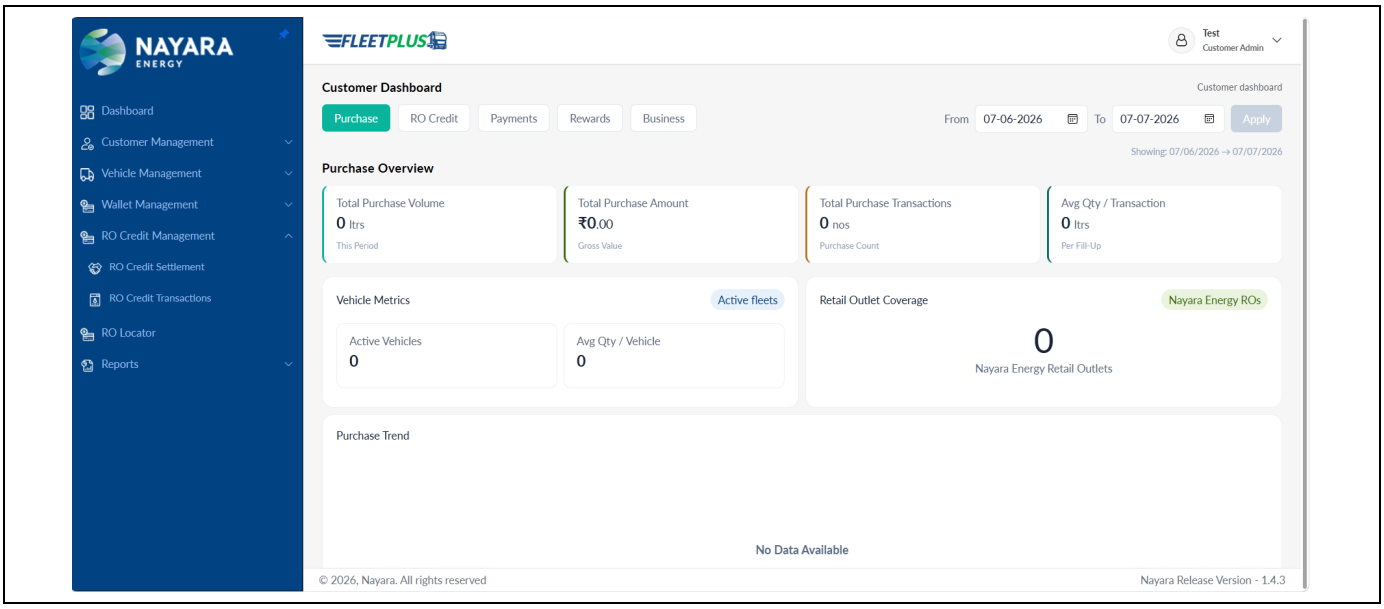

User Manual

1. Introduction

This manual explains how to use the RO Credit Management module available under the Customer Admin Login. It covers RO Credit Settlement, RO Credit Transactions, RO Locator, and the Reports section, along with the step-by-step screens involved in settling a credit payment.

2. RO Credit Management – Overview

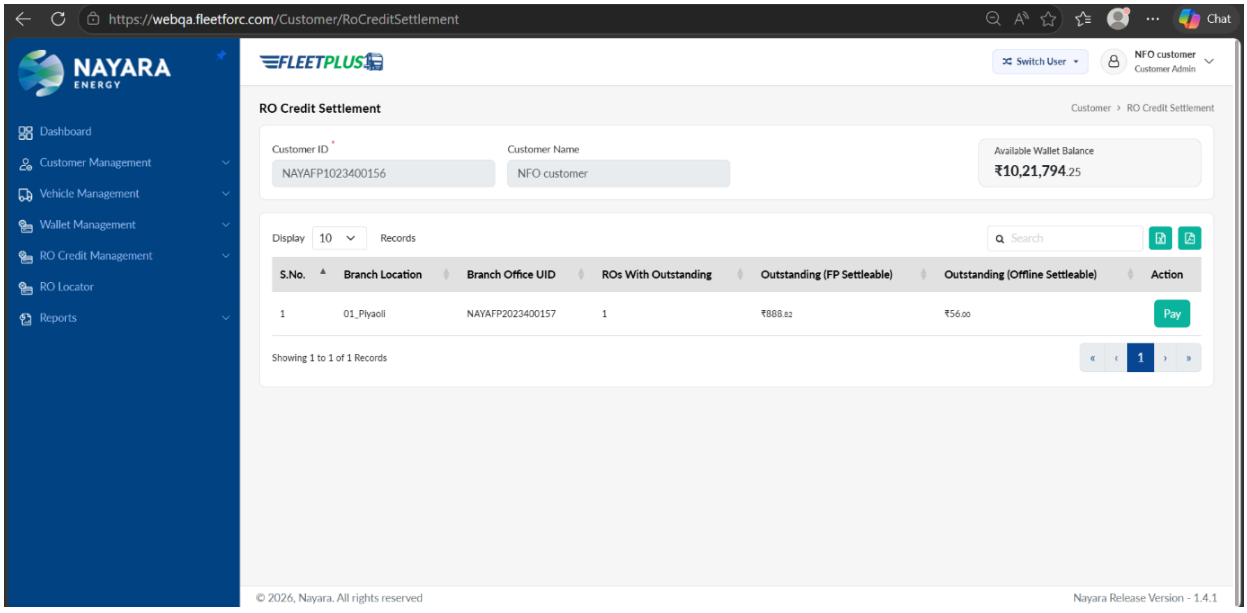

The RO Credit Management section brings together all credit-related activities for Retail Outlets (RO) in one place. From this screen, the admin can navigate to RO Credit Settlement, RO Credit Transaction, RO Locator, and Reports.

RO Credit Management – landing screen

3. RO Credit Settlement

The RO Credit Settlement screen lists all outstanding RO credit records and allows the admin to settle payments directly from this page.

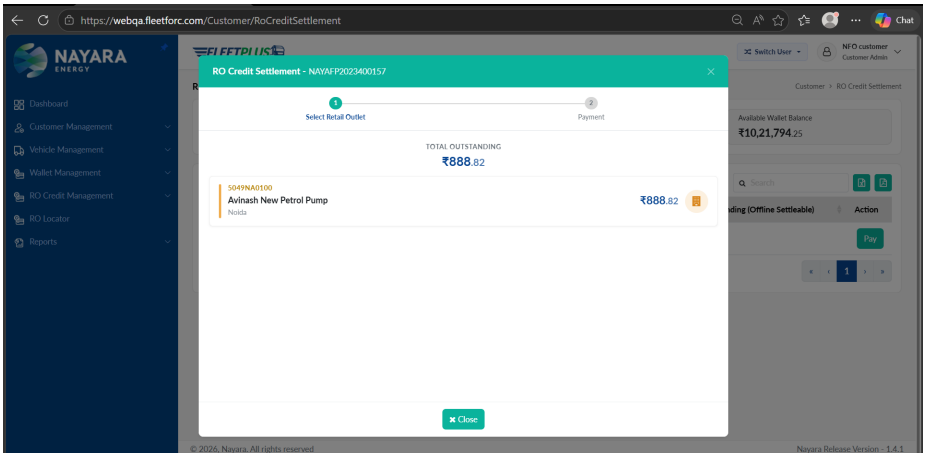

RO Credit Settlement screen

Features available on this page

- Displays the list of RO credit records along with customer/vehicle and outstanding credit amount details.
- Search and filter option to quickly locate a specific record.
- A "Pay" action against each record to initiate settlement of the outstanding credit.
- Pagination to browse through multiple pages of records.
- Export the displayed records to Excel format.
- Export the displayed records to PDF format.

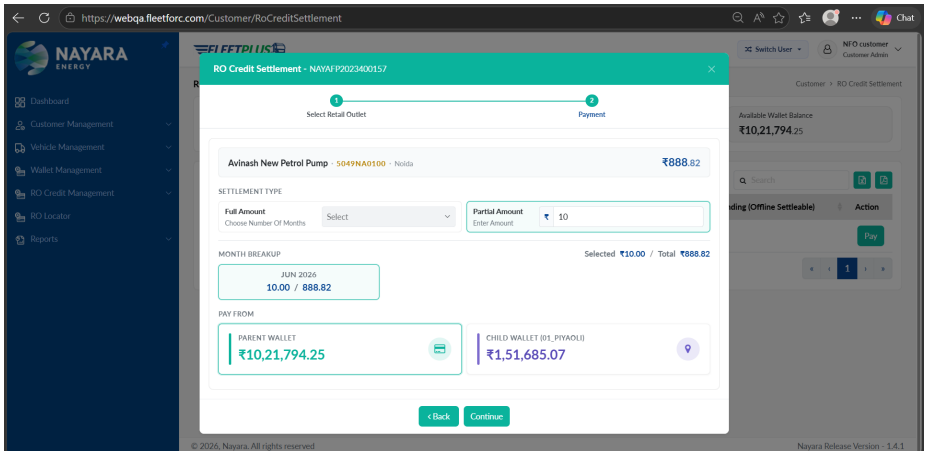

3.1 Settling a Payment

Step 1: Click on the "Pay" option against the record that needs to be settled.

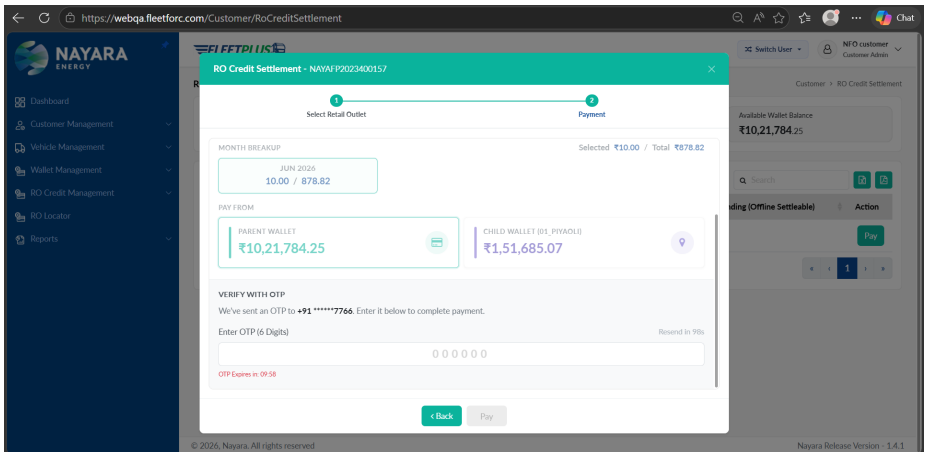

Click on Pay

Step 2: Confirm/enter the payment details in the pay screen.

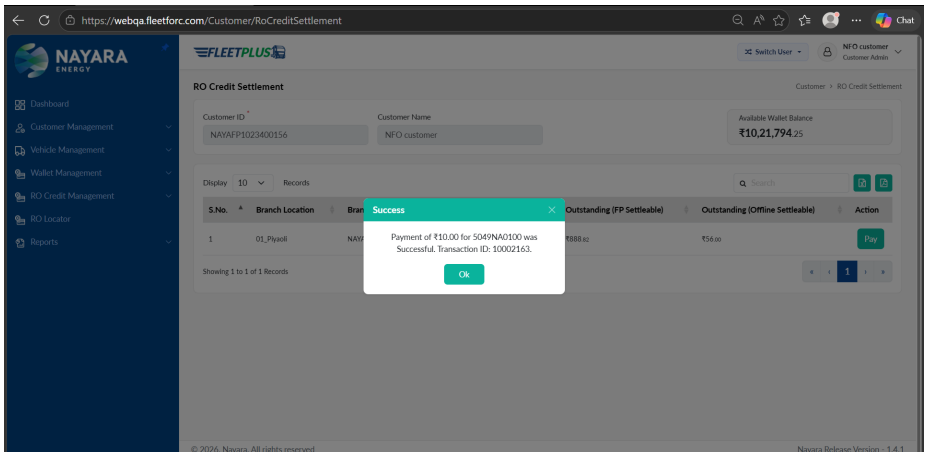

Payment details screen

Step 3: An OTP is sent for verification. Enter the OTP to confirm the transaction.

OTP verification screen

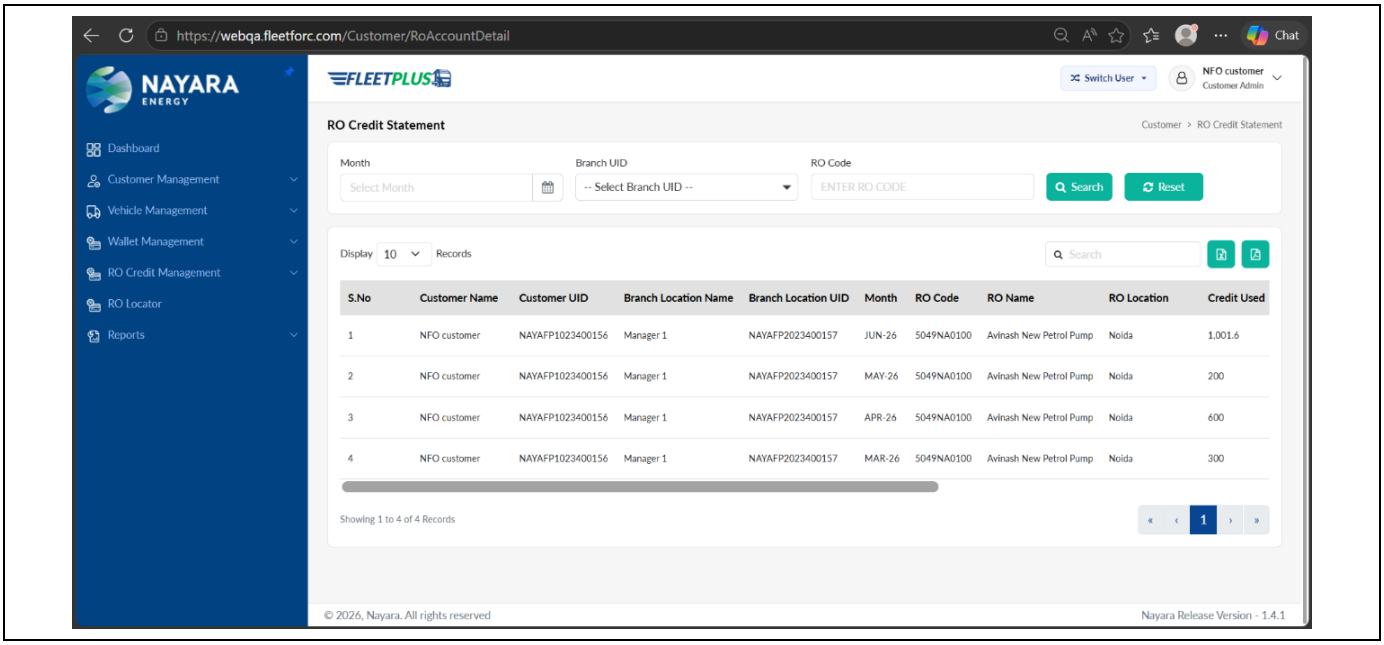

Step 4: Once the OTP is verified, the payment is confirmed and the settlement is completed.

Payment confirmation

4. RO Credit Transaction

The RO Credit Transaction screen displays the complete history of RO credit transactions.

RO Credit Transaction screen

Features available on this page

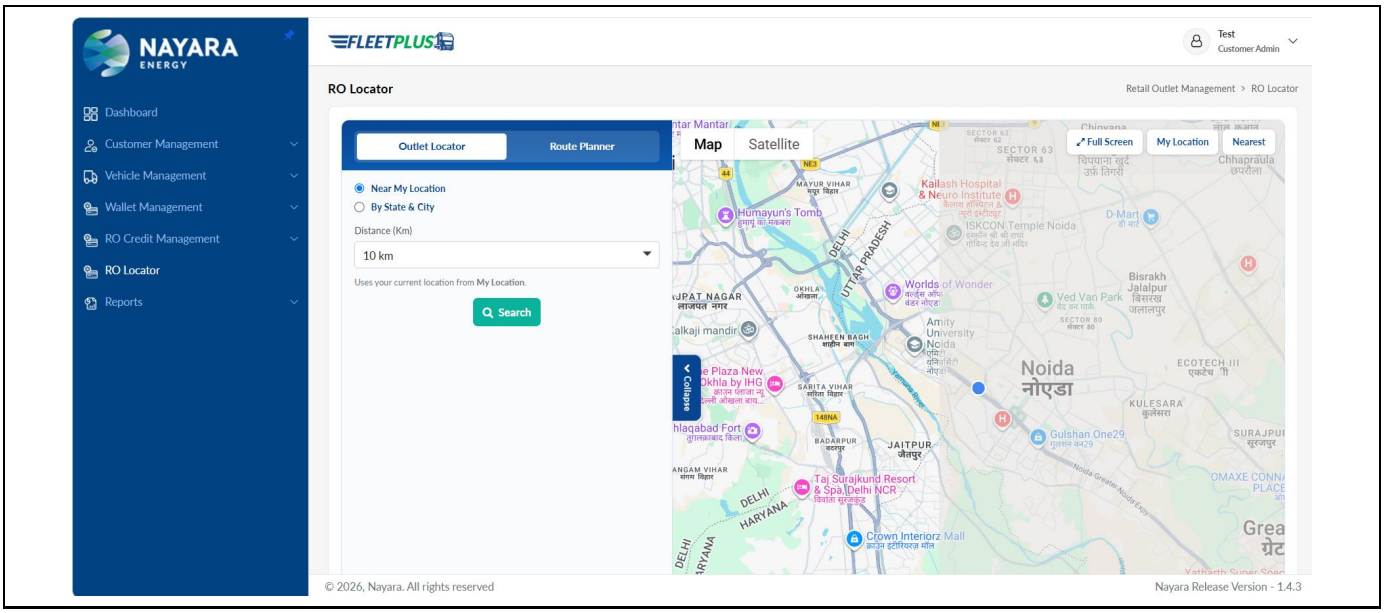

- Displays the list of all RO credit transaction records.
- Filter option to search and view the desired transaction details.
- Export the displayed transaction records to Excel format.
- Export the displayed transaction records to PDF format.

5. RO Locator

The RO Locator screen helps the admin find Retail Outlets on a map, either near a given location or along a planned route between two points.

This page has two modes, available as tabs at the top of the search panel: Outlet Locator and Route Planner.

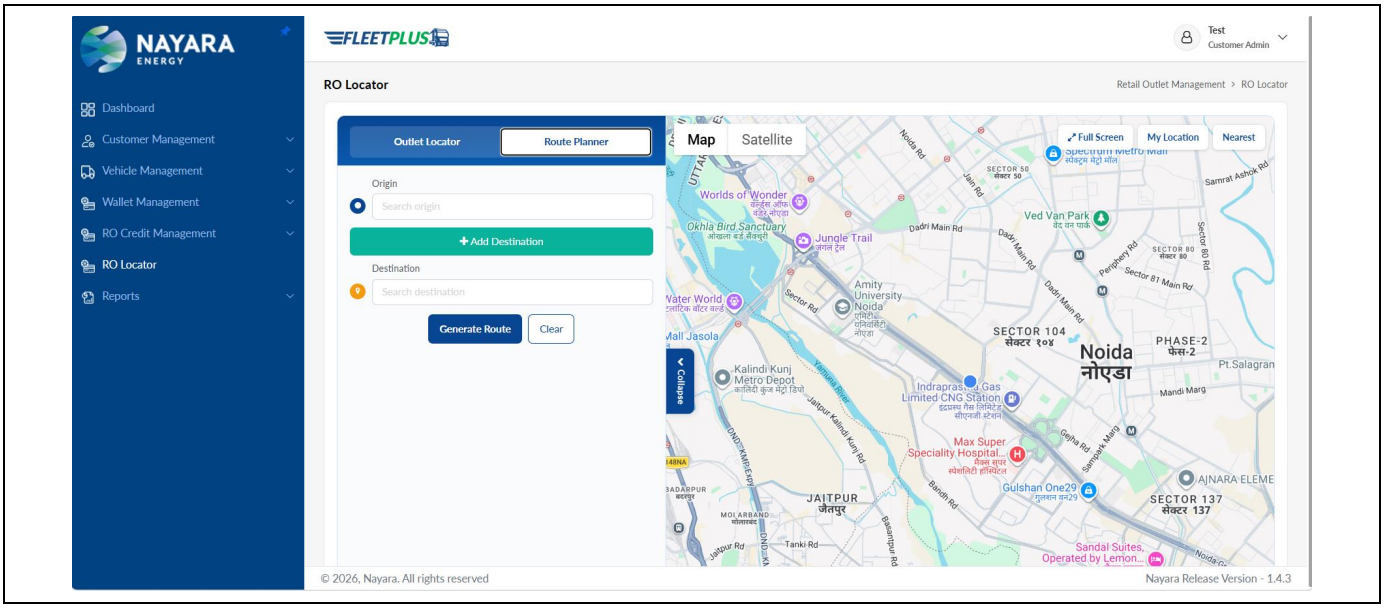

5.1 Outlet Locator

RO Locator – Outlet Locator

- "Near My Location" option to search for outlets around the user's current location.
- "By State & City" option to search for outlets by selecting a state and city.
- "Distance (Km)" dropdown to set the search radius (e.g. 10 km).
- A note confirming that the search uses the current location from "My Location".
- "Search" button to fetch and display the matching outlets on the map.

5.2 Route Planner

RO Locator – Route Planner

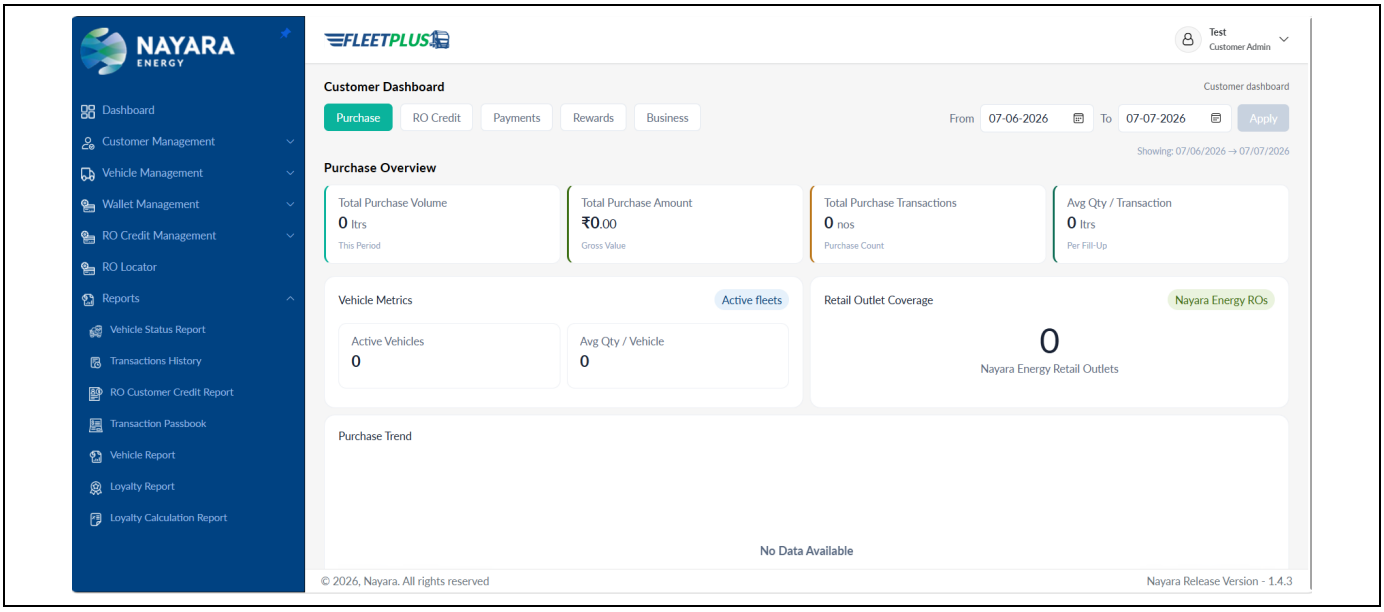

- "Origin" field to search and select the starting location.
- "+ Add Destination" button to add one or more destination points.
- "Destination" field to search and select the destination location.
- "Generate Route" button to plot the route on the map.
- "Clear" button to reset the entered origin and destination.

5.3 Map Panel (common to both modes)

- "Map" / "Satellite" toggle to switch between the standard map view and satellite view.
- "Full Screen" button to expand the map to full screen.
- "My Location" button to centre the map on the user's current location.
- "Nearest" button to highlight the nearest outlet(s).
- "Collapse" arrow to hide the left-side search panel for a larger map view.
- Interactive map with pin markers showing the location of retail outlets and nearby landmarks.

6. Reports

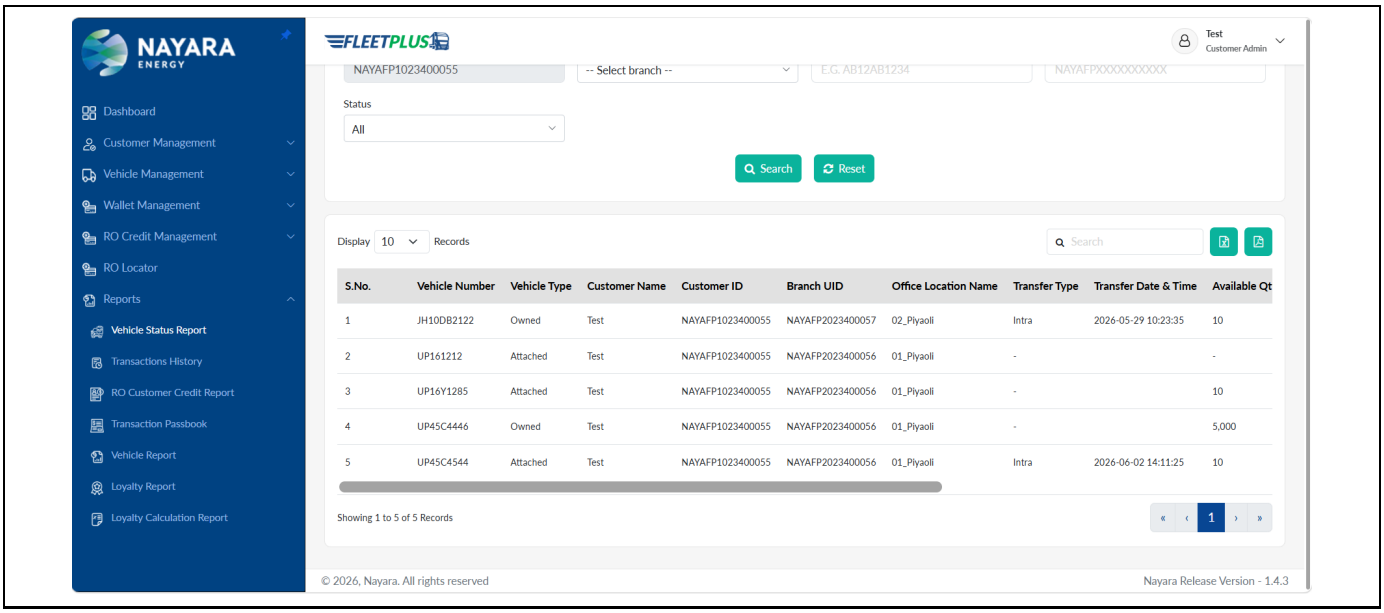

The Reports section provides access to various pre-built reports. Select the required report from the left-hand Reports menu to view its records. Each report screen offers date/ID based filters, a data grid, and options to export the results to Excel and PDF.

Reports – list of available reports

6.1 Vehicle Status Reports

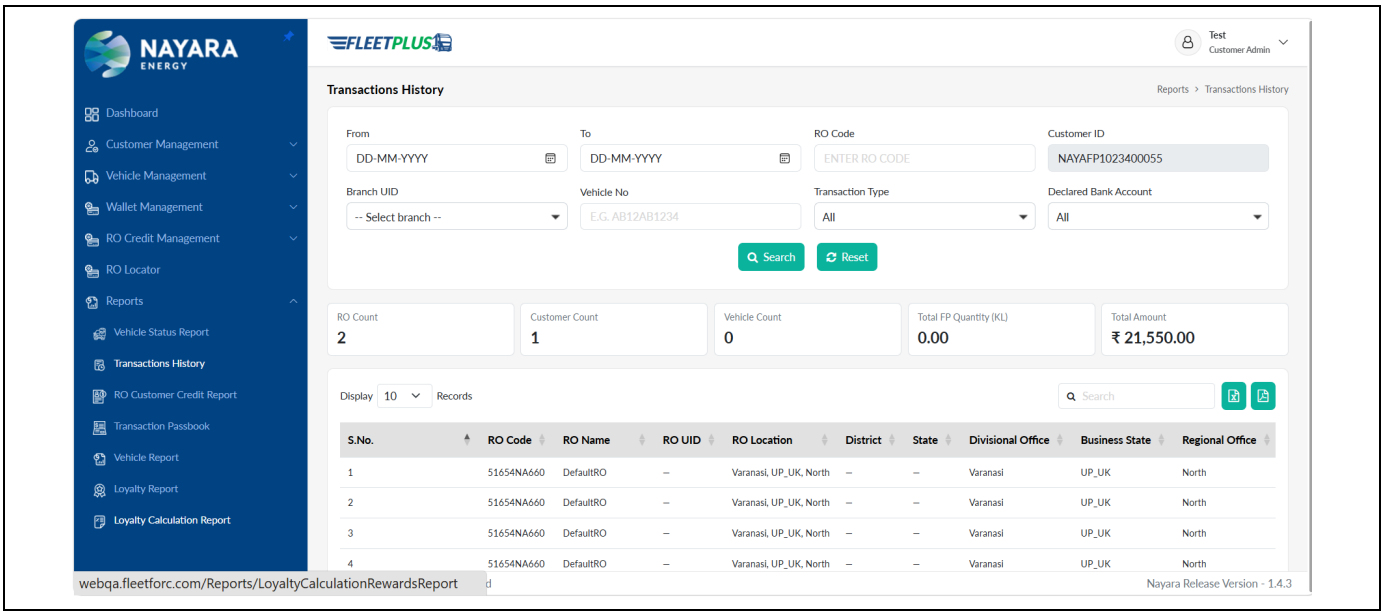

Shows the current status of each vehicle mapped to the customer, such as whether it is Owned or Attached, its branch/office location, and details of any transfer (transfer type and transfer date & time), along with the available quantity against the vehicle.

Vehicle Status Reports

6.2 Transaction History

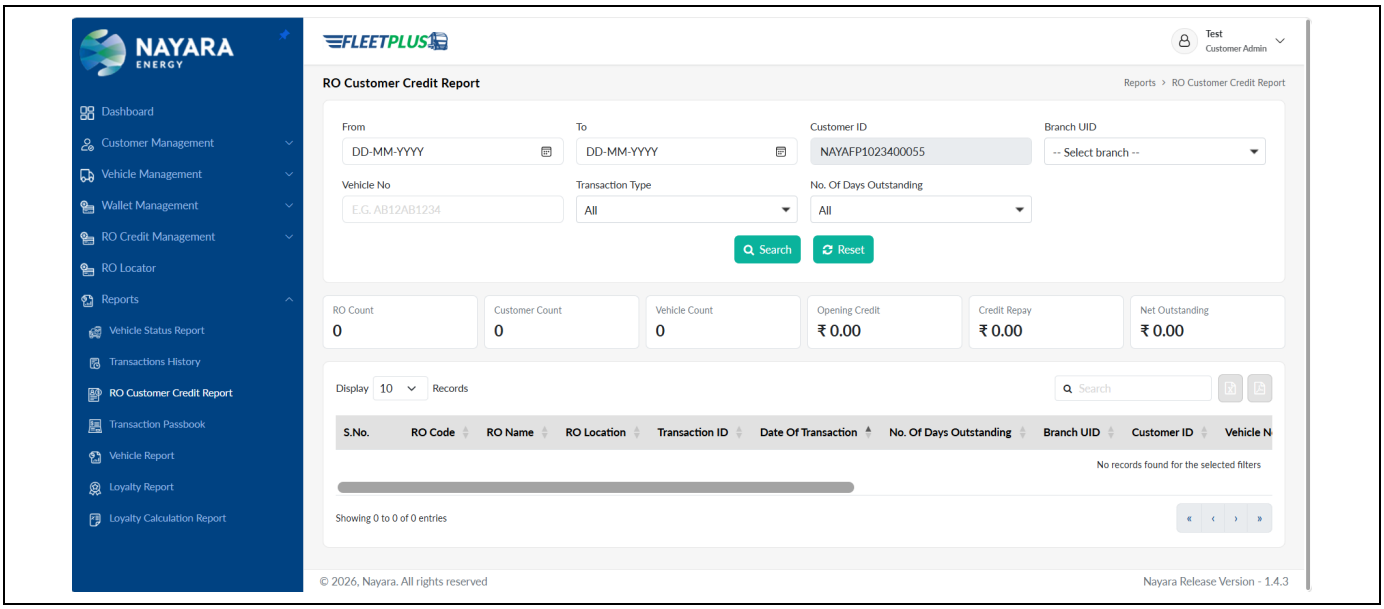

Shows the RO-wise history of transactions, including the RO code, name and location along with the district, state, division, business state, and regional office to which the RO belongs, together with summary counts (RO, customer and vehicle counts) and the total fuel quantity and amount transacted.

Transaction History

6.3 RO Customer Credit Reports

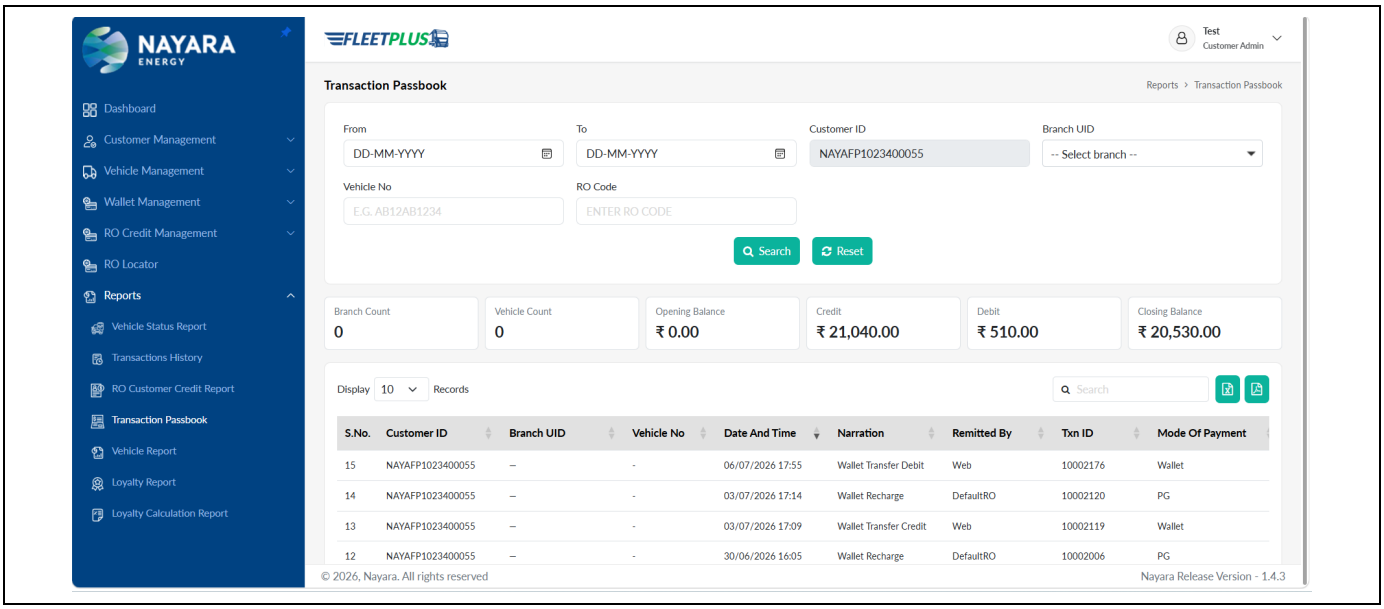

Shows the credit position of the customer at each RO, including the opening credit, credit repaid, and net outstanding amount, along with the number of days each transaction has been outstanding.

RO Customer Credit Reports

6.4 Transaction Passbook

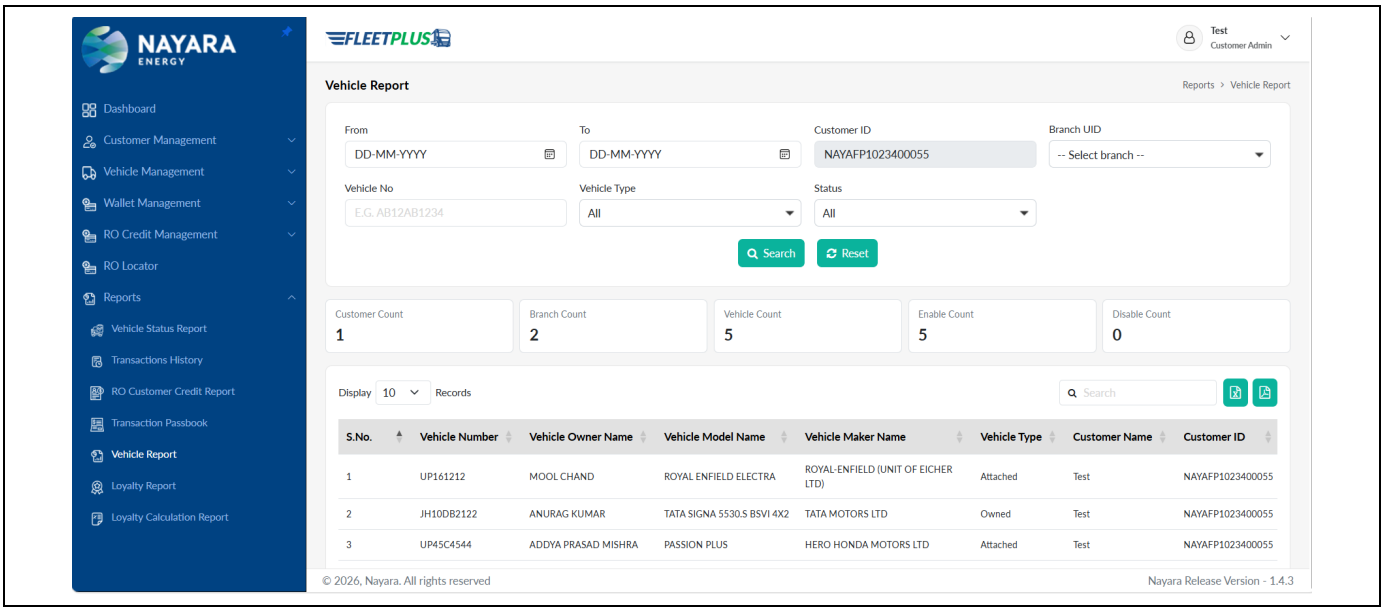

Acts as a passbook of wallet transactions, showing each credit and debit entry with the date and time, narration (e.g. Wallet Recharge, Wallet Transfer Credit/Debit), the transaction ID, mode of payment, and the resulting opening and closing balances.

Transaction Passbook

6.5 Vehicle Reports

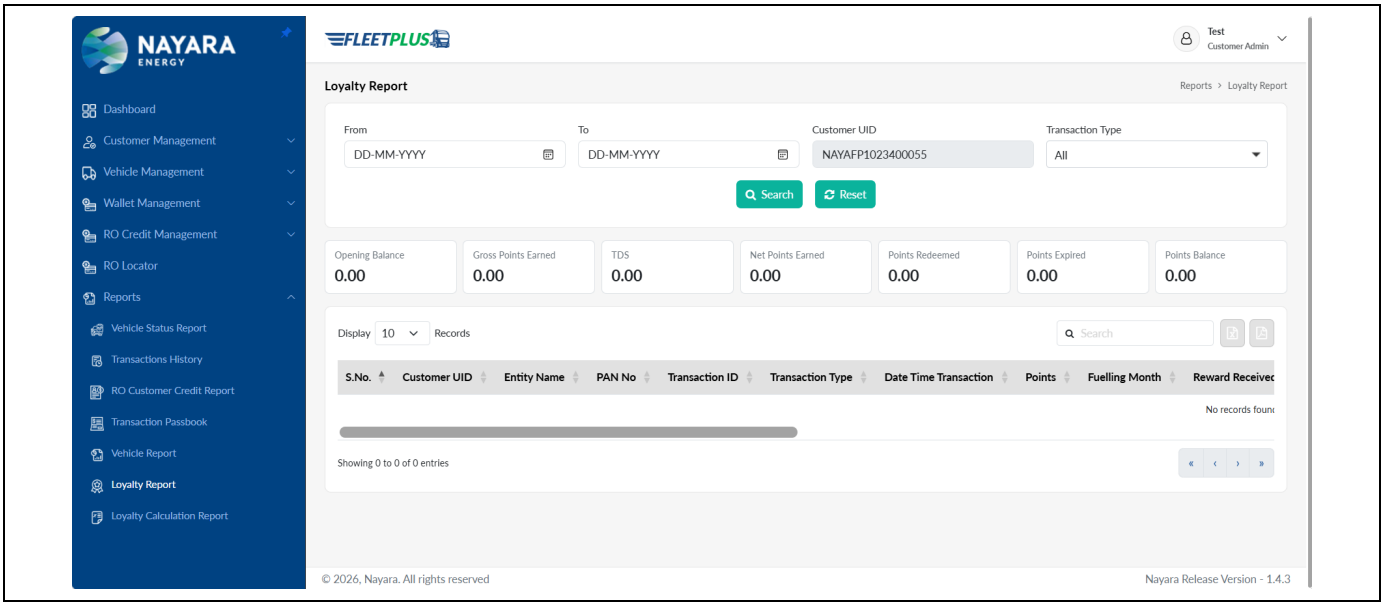

Shows the master list of vehicles registered under the customer, with vehicle number, owner name, model and maker, vehicle type (Owned/Attached), and summary counts of enabled and disabled vehicles.

Vehicle Reports

6.6 Loyalty Reports

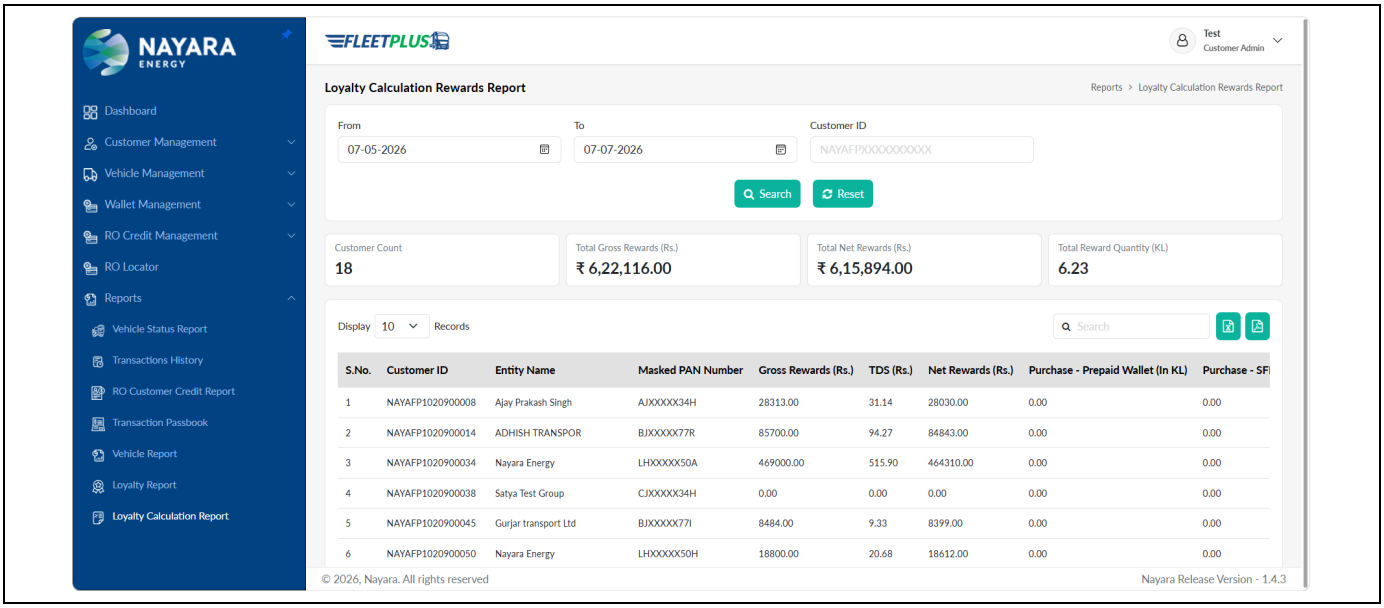

Shows the loyalty points activity for the customer, including opening balance, gross points earned, TDS, net points earned, points redeemed, points expired, and the closing points balance, along with the underlying transaction-wise entries.

Loyalty Reports

6.7 Loyalty Calculation Report

Shows how loyalty rewards have been calculated for each customer, including the masked PAN number, gross rewards, TDS deducted, net rewards, and the purchase quantity/value on which the rewards are based, along with overall totals for the selected period.

Loyalty Calculation Report
