# 1. Overview

This manual is a user guide for the **RO Admin Portal** of Nayara FleetPlus — the web-based application used by Retail Outlet (RO) users to manage their outlet's day-to-day operations. It walks the reader through every major module of the portal in the order a user would naturally encounter them: starting from the landing Dashboard, through onboarding and managing customers, registering and tracking vehicles, administering the retail outlet itself (PINs, users, terminals, bank accounts, credit, settlements), locating outlets on a map, and finally pulling operational reports.

Each module is explained using the actual screens captured from the application, so the reader can match what they see on their own screen to the instructions step-by-step, rather than working from abstract descriptions alone.

# 2. Dashboard

The Dashboard is the landing page of the RO Admin Portal. It gives the logged-in RO user a quick, at-a-glance summary of the outlet's balances, transactions, and customer activity for the current month, without having to open individual modules.

### Balances & MTD Overview

This widget shows the outlet's available balances and the latest wallet transactions for the month:

| Widget | Description |
|---|---|
| Wallet Balance | The current available balance in the RO's wallet. |
| SAP Balance | The current balance as reflected in the SAP (back-end accounting) system. |
| Latest Transactions | A running list of the most recent wallet credits/debits with the date, time, and amount (e.g. "Yesterday, 5:49 PM +₹20,000.00"). |
| Total Sales MTD | Total sales value (with corresponding fuel quantity in litres) recorded for the current month. |
| Total Payments MTD | Total payments received for the current month. |
| Filter (Wallet / SFL / POS / Credit) | Lets the user filter the Total Sales MTD figure by payment mode. |
| Filter (Wallet / SFL / Repayment) | Lets the user filter the Total Payments MTD figure by payment mode. |

### Customer Insights

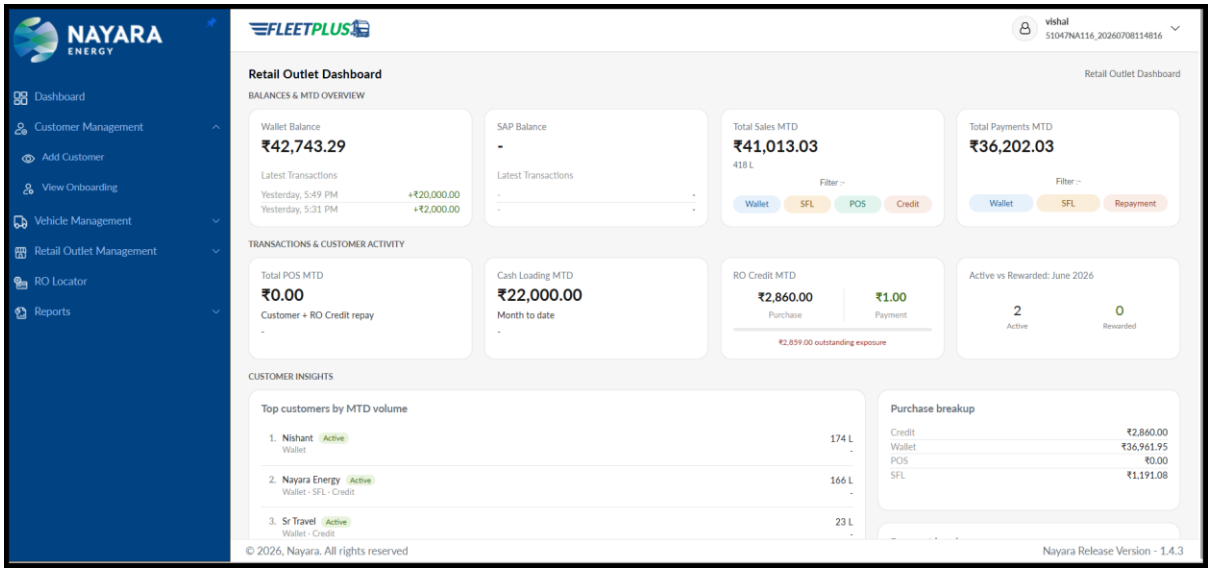

This section summarizes the outlet's monthly transaction performance using tiles and filters:

| Widget | Description |
|---|---|
| Top Customers by MTD Volume | A ranked list of the outlet's top customers for the month, showing their name, status (e.g. Active), payment mode(s) used (Wallet, SFL, Credit), and fuel volume (in litres). |
| Purchase Breakup | A break-up of the total purchase amount by payment mode — Credit, Wallet, POS, and SFL. |
| Payment Breakup | A break-up of the total payment amount by payment mode — Wallet, SFL, Wallet Repayment, and POS Repayment. |

### Transactions & Customer Activity

| Widget | Description |
|---|---|
| Total POS MTD | Total point-of-sale transaction value for the current month, covering customer and RO Credit repayments. |
| Cash Loading MTD | Total cash loaded into the wallet, month to date. |
| RO Credit MTD – Purchase | Total value of purchases made on RO credit during the month. |
| RO Credit MTD – Payment | Total value of payments made against RO credit during the month, along with the net outstanding exposure. |
| Active vs Rewarded (monthly) | A count comparing the number of active customers against the number of customers rewarded under loyalty/incentive schemes for the selected month. |

# 2. Customer Management

The Customer Management module is used to onboard new customers and to track their onboarding requests through review and approval. It has two sub-sections:

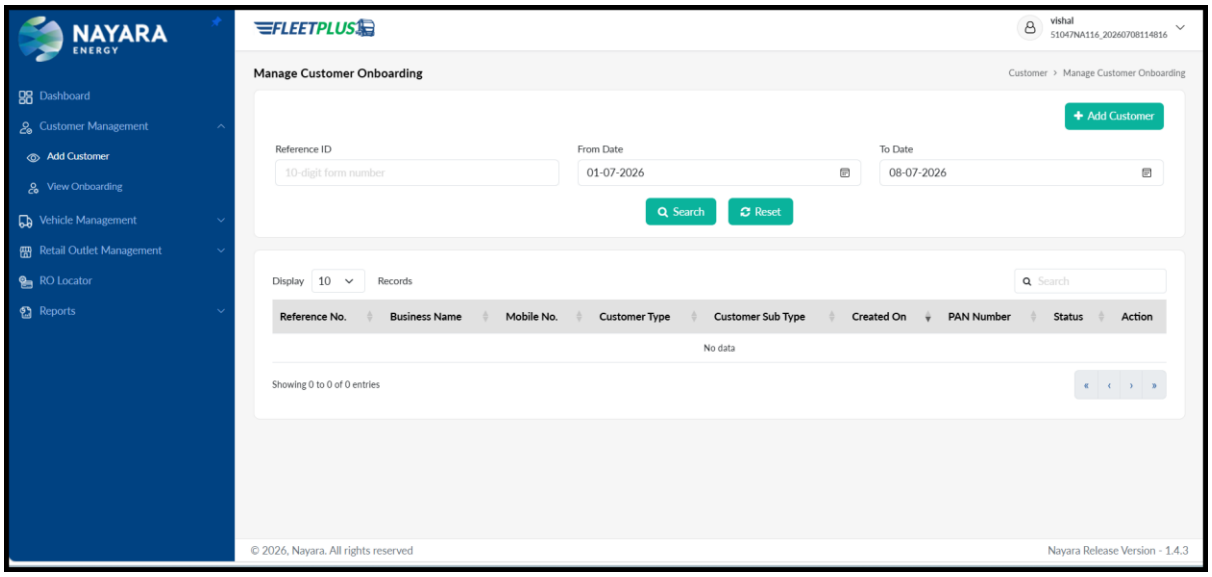

1. Add Customer
2. View Onboarding

### Customer Onboarding Workflow

Every new customer moves through four stages before becoming active in the system:

| Stage | Description |
|---|---|
| **Add Customer** | Allows the Maker to create a new customer onboarding request by selecting the customer type and entering the required information. |
| **Customer Consent** | Enables the customer to provide OTP-based consent for KYC data collection and sharing. |
| **Review** | Allows the Reviewer to verify the submitted application, validate supporting documents, and forward the application for approval. |
| **Approval** | Allows the Approver (Checker) to perform the final verification and either approve or reject the application. |

**Navigation:** Sidebar → Customer Management → Add Customer

## 2.1 Add Customer

The **Add Customer** option is used to initiate a new customer onboarding/application process.

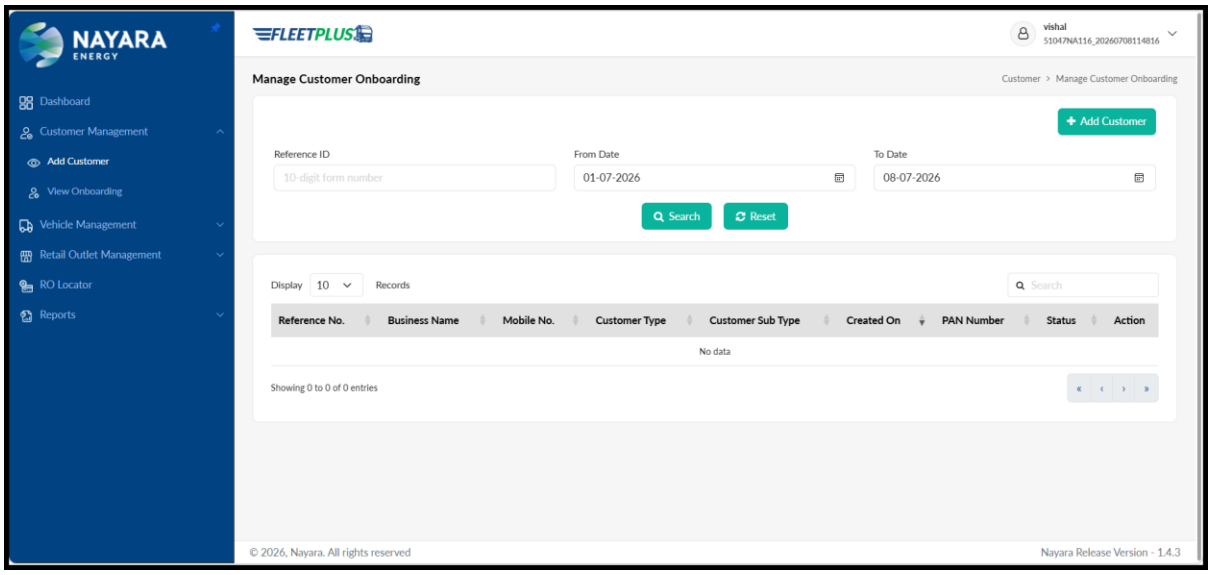

**Process Steps:**

3. Click **Add Customer**.
4. The system opens the customer onboarding form.
5. Select the appropriate customer type (FO, NFO, Corporate, OD).

The onboarding form and its verification/approval flow are described below for each customer type.

### 2.1.1 Customer Onboarding Form (For Fleet)

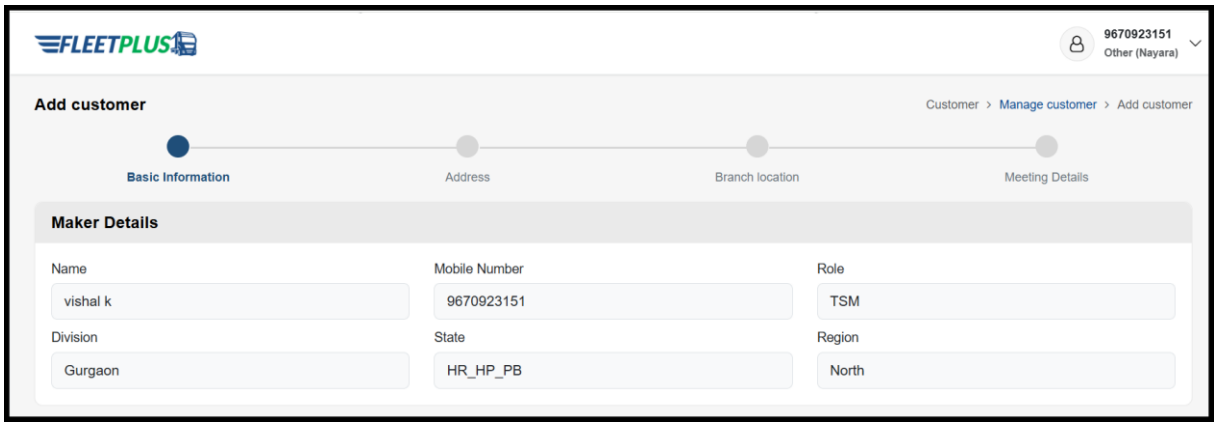

**Navigation:** Customer Onboarding → Add → Add Customer

## Maker Details

Displays information about the user initiating the customer onboarding request. These details are automatically populated based on the logged-in user type.

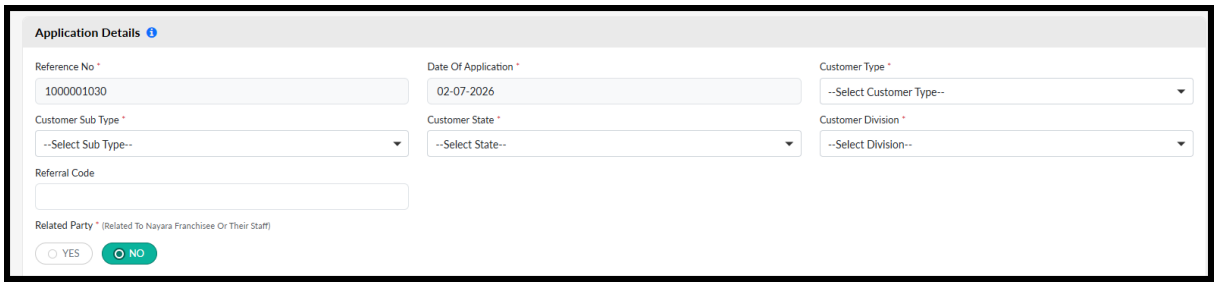

| Field | Description |
|---|---|
| **Name** | Displays the name of the logged-in Maker. |
| **Mobile Number** | Displays the registered mobile number of the logged-in Maker. |
| **Role** | Displays the role assigned to the logged-in user (e.g., TSM, DSA, BDA, DM, SFM, Franchisee User). |
| **Division** | Displays the division associated with the logged-in user. |
| **State** | Displays the state mapped to the logged-in user. |
| **Region** | Displays the region assigned to the logged-in user. |

## Application Details

Captures the basic information required to create a new customer onboarding request.

| Field | Description |
|---|---|
| **Reference No.** | System-generated unique application reference number. |
| **Date of Application** | Displays the current system date on which the application is created. |
| **Customer Type** | Select **Fleet** from the drop-down list. |
| **Customer Sub Type** | Select the appropriate Corporate Customer Sub Type. |
| **State** | Select the customer's operating state. |
| **Division** | Select the applicable business division. |
| **Referral Code** | Enter the referral code, if applicable. |
| **Related Party** | Indicates whether the customer is related to a Nayara franchisee or Nayara employee. |

**Related Party:** Indicates whether the customer is related to Nayara Franchisee or staff. Available options: Yes / No. If the user selects **Yes**, additional related-party fields are unlocked and must be completed, as shown below.

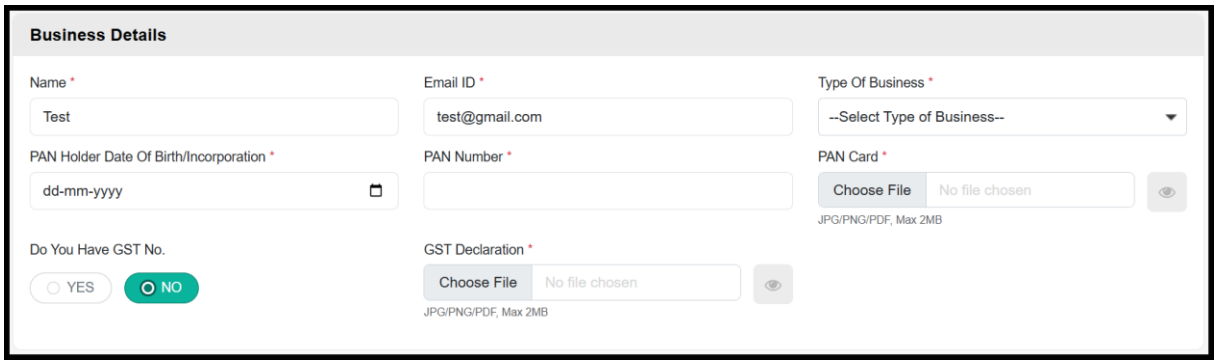

## Business Details

Captures the organization's business information and statutory details required for KYC verification.

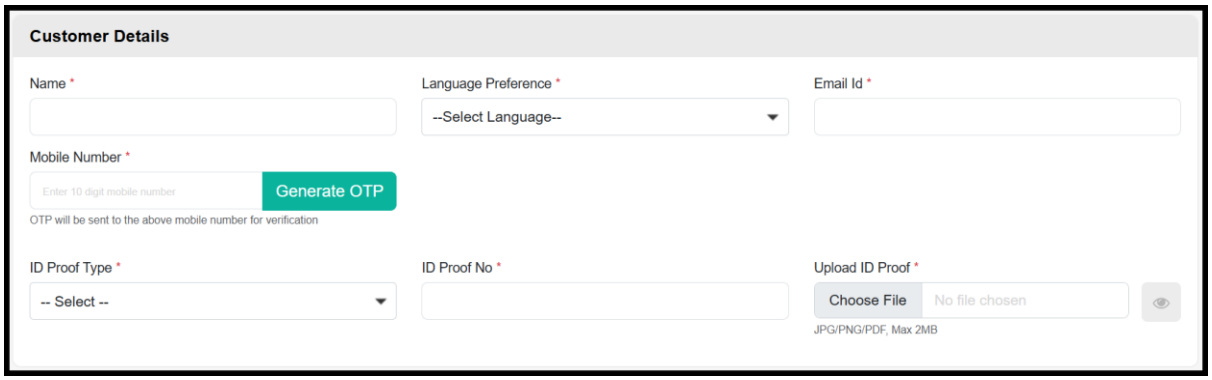

| Field | Description |
|---|---|
| **Name** | Enter the registered business name. |
| **Email ID** | Enter the registered business email address. |
| **Type of Business** | Select the applicable business type from the drop-down list. |
| **PAN Holder Date of Birth/Incorporation** | Enter the PAN holder's Date of Birth or the organization's Date of Incorporation. |
| **PAN Number** | Enter the Permanent Account Number (PAN). The system |

| | |
|---|---|
| | enforces uniqueness of PAN — **duplicate PAN** registrations are **rejected** at the point of entry. |
| **PAN Card** | Upload the PAN Card document (JPG, PNG, PDF). |
| **Do You Have GST No.** | Select **Yes** or **No**. |
| **GST Declaration** | Upload the GST Declaration document, where applicable. |

### Customer Details

Captures the primary contact person's information for communication and identity verification.

| Field | Description |
|---|---|
| **Name** | Enter the customer's full name. |
| **Language Preference** | Select the preferred communication language. |
| **Email ID** | Enter the customer's email address. |
| **Mobile Number** | Enter the customer's registered 10-digit mobile number. |
| **ID Proof Type** | Select the applicable identity proof from the drop-down list. |
| **ID Proof Number** | Enter the identity proof number. |
| **Upload ID Proof** | Upload the selected identity proof document. |

**Mobile Number Verification:** The customer's mobile number must be verified before the onboarding application can proceed.

- Click **Generate OTP** after entering the registered mobile number.
- A **One-Time Password (OTP)** is sent to the customer's registered mobile number.
- Enter the received OTP and complete the verification process.
- The mobile number must be successfully verified before proceeding further.

**Mobile Number Validation:** The system performs the following validations:

- The mobile number must be a valid **10-digit** number.
- OTP verification is mandatory.
- Duplicate mobile numbers are **not permitted**.
- If the entered mobile number already exists, a validation message is displayed and the user cannot proceed until a unique mobile number is provided.

### Customer Segmentation

Classifies customers based on predefined business criteria to support reporting, analytics, and business planning.

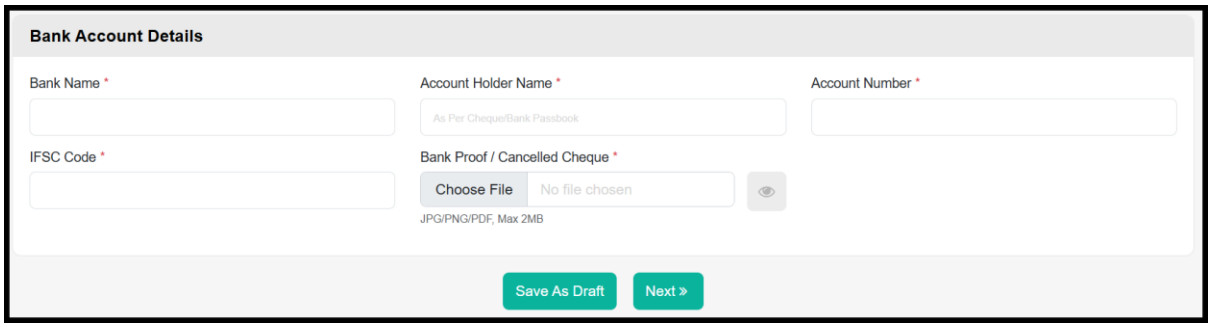

| Field | Description |
|---|---|
| **Customer Segment** | Select the applicable customer segment from the drop-down list. |
| **Buying Pattern** | Select the customer's buying pattern from the drop-down list. |

### Bank Account Details

Captures the customer's banking information for financial transactions, settlements, and payment processing.

| Field | Description |
|---|---|
| **Bank Name** | Enter the customer's bank name. |
| **Account Holder Name** | Enter the account holder's name exactly as it appears on the cheque or bank passbook. |
| **Account Number** | Enter the customer's bank account number. |
| **IFSC Code** | Enter the bank's IFSC Code. |
| **Bank Proof / Cancelled Cheque** | Upload a cancelled cheque or other valid bank proof. |

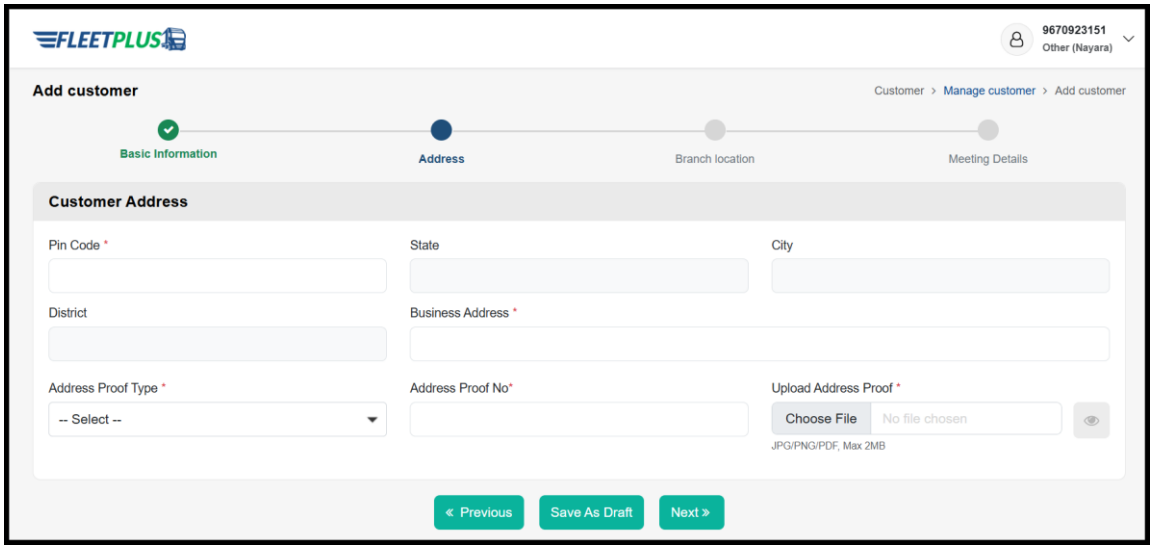

**Save as Draft** — saves partially completed data and allows the user to continue onboarding later.
**Next** — saves the current information and moves the user to the next onboarding step/page.

### Address Details

Captures the customer's registered business address along with the supporting address proof required for verification.

| Field | Description |
|---|---|
| **Pin Code** | Enter the customer's Pin Code. |
| **State** | Auto-populated based on the entered Pin Code. |
| **City** | Auto-populated based on the entered Pin Code. |
| **District** | Auto-populated based on the entered Pin Code. |
| **Business Address** | Enter the complete registered business address. |
| **Address Proof Type** | Select the applicable address proof from the drop-down list. |
| **Address Proof Number** | Enter the document number corresponding to the selected address proof. |
| **Upload Address Proof** | Upload the supporting address proof document. |

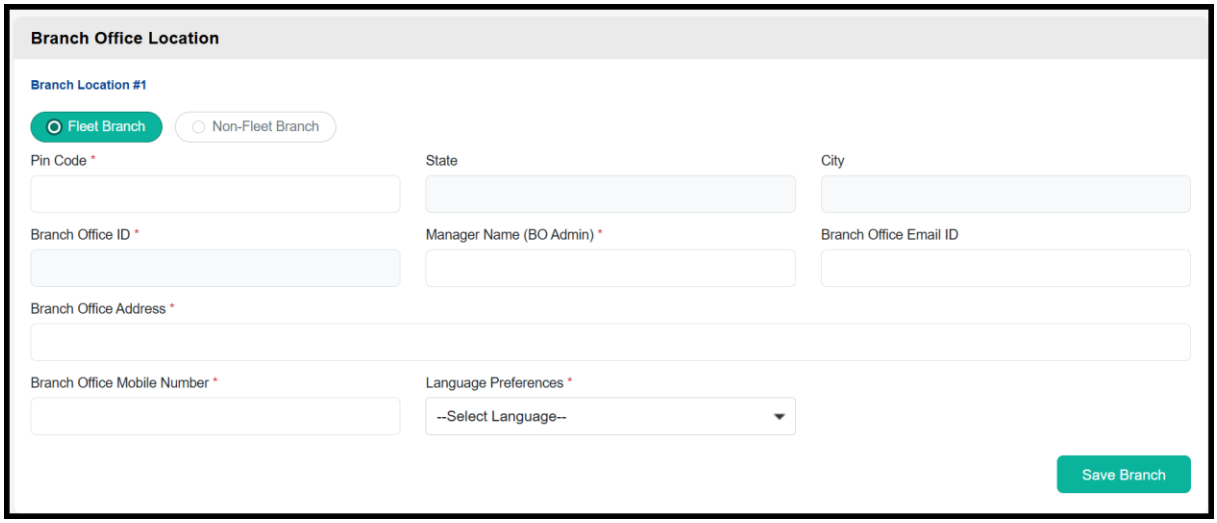

## Branch Details

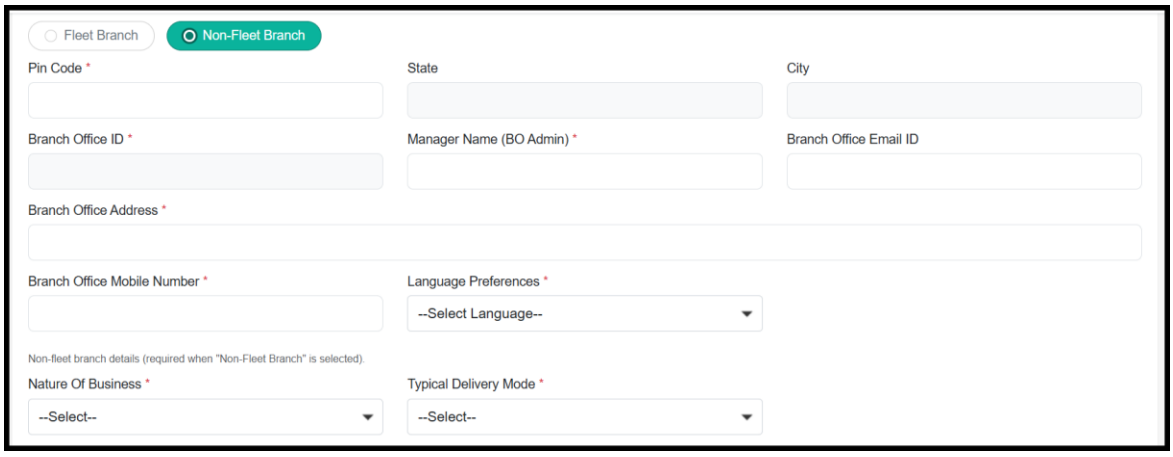

Depending on the Branch Type selected during onboarding, the system displays the relevant fields that must be completed.

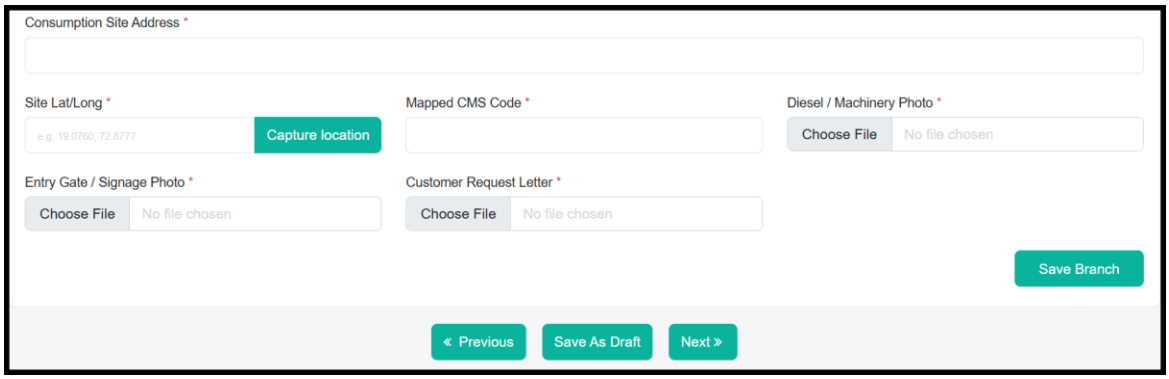

**Fleet Branch Details:**

| Field | Description |
|---|---|
| **Pin Code** | Enter the Branch Pin Code. |
| **State** | Auto-populated based on the entered Pin Code. |
| **City** | Auto-populated based on the entered Pin Code. |
| **Branch Office ID** | Enter the Branch Office ID. |
| **Manager Name (BO Admin)** | Enter the Branch Office Manager's name. |
| **Branch Office Email ID** | Enter the Branch Office email address. |
| **Branch Office Address** | Enter the complete Branch Office address. |
| **Branch Office Mobile Number** | Enter the Branch Office contact number. |
| **Language Preference** | Select the preferred communication language for the Branch Office. |

**Non-Fleet Branch Details:** If the selected branch type is **Non-Fleet Branch**, the following additional information must be provided.

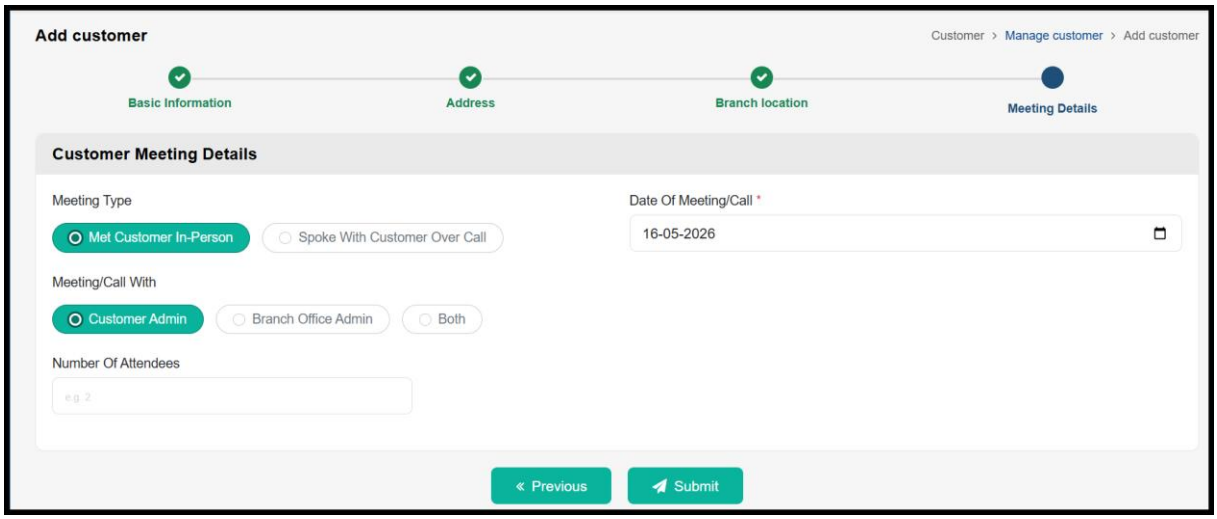

- Nature of Business
- Typical Delivery Mode
- Consumption Site Address
- Site Lat/Long
- Mapped CMS Code
- Diesel / Machinery Photo
- Entry Gate / Signage Photo
- Customer Request Letter

**Save Branch** — saves the entered branch details. **Add Another Branch** — opens a new branch section to add multiple branch details (available after saving the current branch). **Branch Addition Limit** — a maximum of five (5) branches can be added during a single onboarding request; adding more requires approval from the authorized approver. **Next** — saves branch details and opens the Meeting Details page.

## Meeting Details

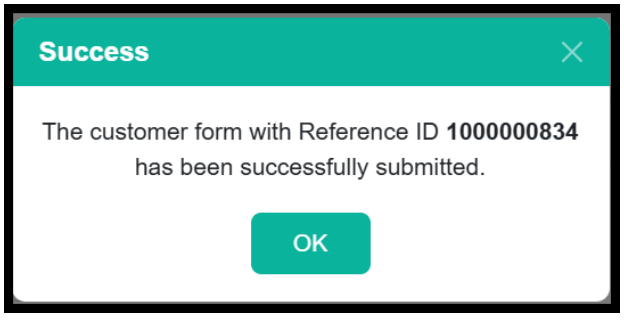

Captures information regarding the customer interaction conducted during the onboarding process.

| Field | Description |
|---|---|
| **Meeting Type** | Select the type of customer interaction (Meeting or Call). |
| **Date of Meeting/Call** | Select the date on which the meeting or call was conducted. |
| **Meeting/Call With** | Enter the name of the customer representative or contact person. |
| **Number of Attendees** | Enter the total number of participants who attended the meeting or call. |

**Submit** — submits the completed onboarding form.

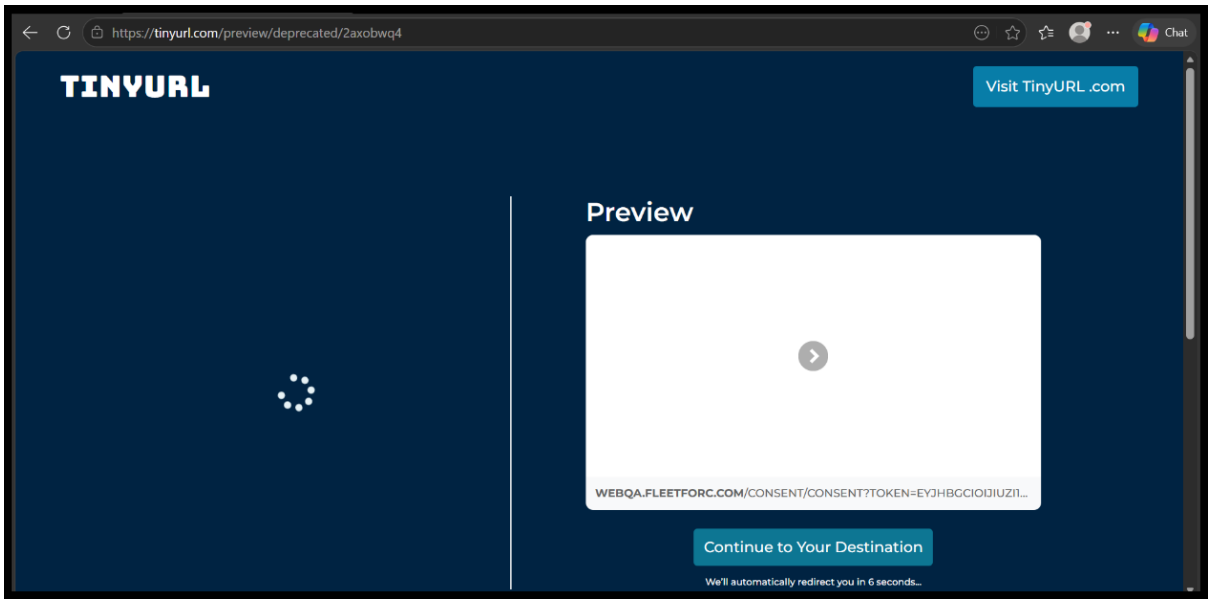

- Customer onboarding form is submitted successfully.
- Customer record is created in the system for further approval/processing.

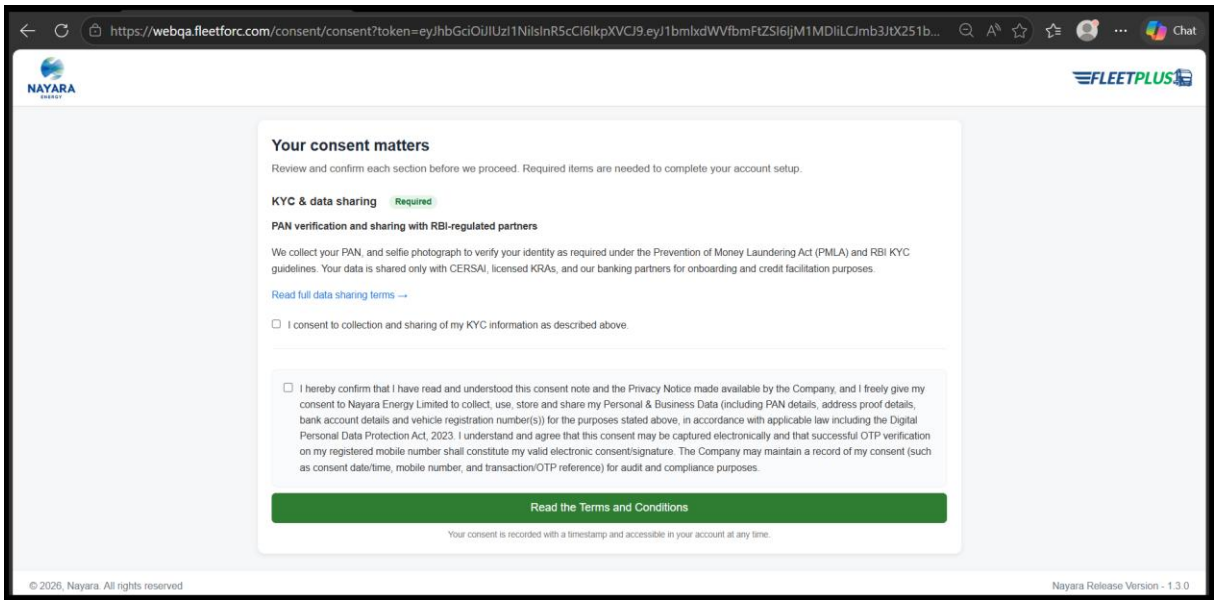

**Customer Consent**

A mandatory verification step that lets the customer review and provide explicit consent for the collection, processing, and sharing of KYC and business-related information before the application proceeds to Reviewer verification. Consent is recorded through OTP-based authentication to ensure compliance with data-privacy requirements.

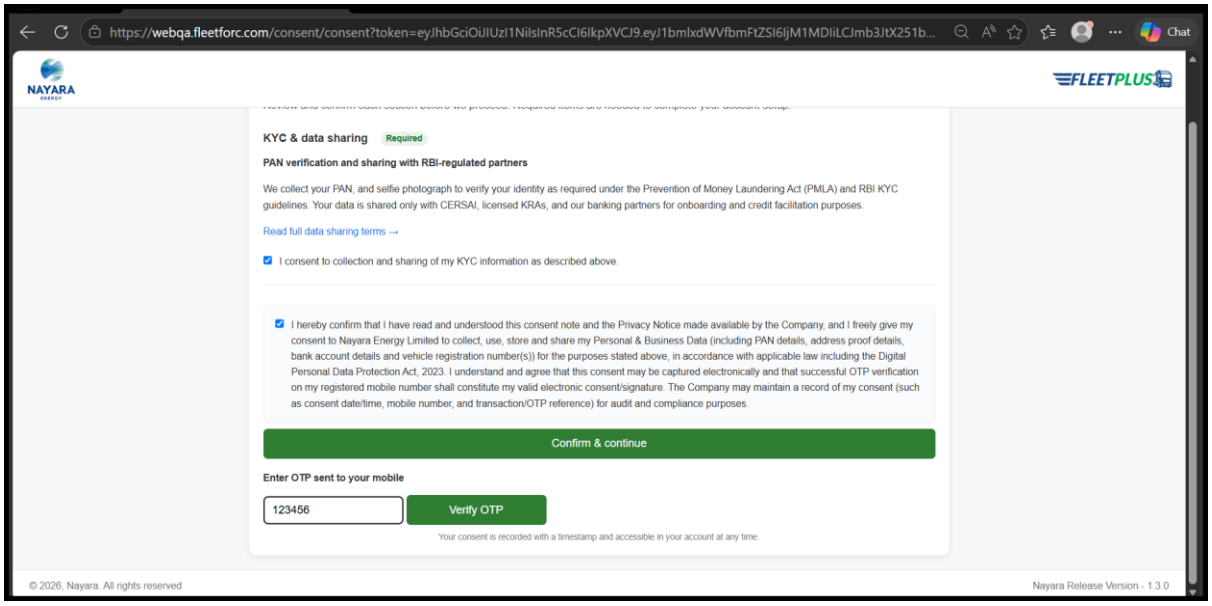

**Navigation:** Upon successful submission, the system automatically sends a **Customer Consent** link to the customer's registered mobile number via SMS. The customer opens the link to access the consent page.

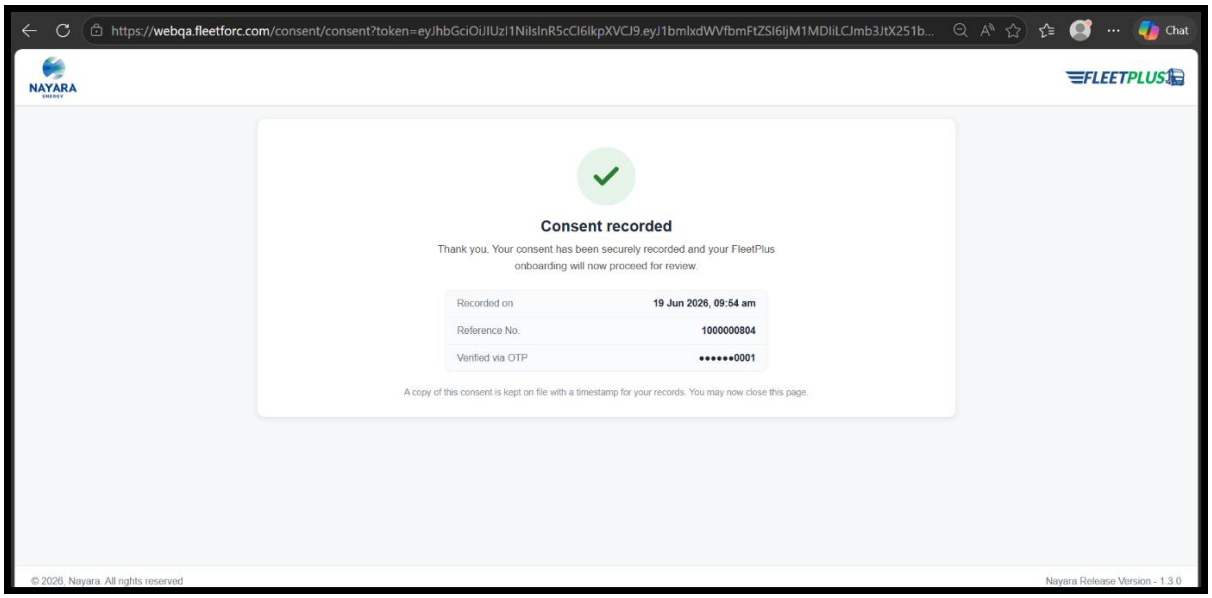

The customer is redirected to the **Your Consent Matters** page, where they must review and acknowledge the consent declaration — covering the collection, usage and sharing of KYC information such as PAN details and selfie photographs — before proceeding. The customer may select **Read Full Data Sharing Terms** to review the complete privacy policy.

To continue, the customer must select the checkbox confirming consent for KYC collection/sharing, select the declaration confirming the Privacy Notice has been read, and click **Confirm & Continue**. The system then sends an OTP, which the customer enters and verifies via **Verify OTP**.

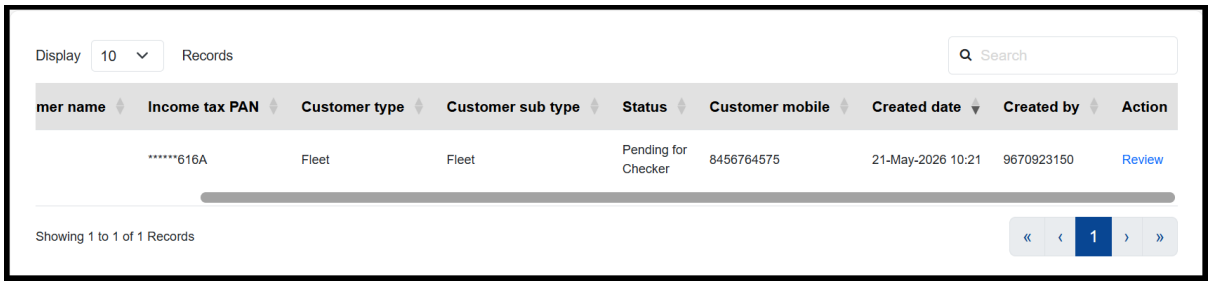

Once the OTP is validated, the system records the consent and displays a confirmation containing the Consent Status, Recorded Date and Time, Reference Number, Masked Registered Mobile Number, and Verification Status.

**Note:** A copy of the consent is securely stored with a timestamp for audit and compliance purposes. The application is then automatically forwarded to the Reviewer Verification stage.

**Reviewer Verification Process**

**Navigation Path:** This will only access to the authorized users of Nayara team.

**Basic Information Verification** — the Reviewer verifies customer information, business information, segmentation details, bank account information, and uploaded supporting documents.

**Verification Checklist:** Verify customer details and verify the uploaded PAN card document.

- I confirm PAN card document is uploaded.

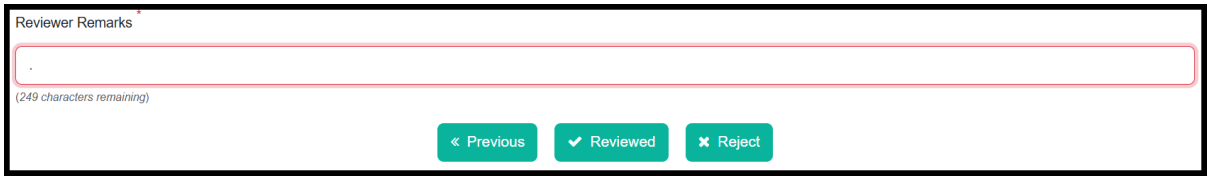

Scroll further and verify bank-related documents.

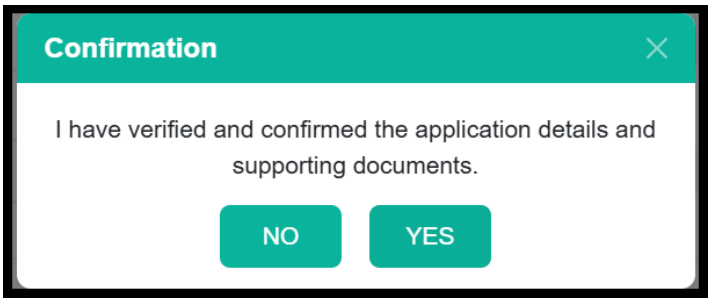

- I confirm bank account / cancelled cheque document is uploaded.

After verification, click **Next**. On the **Address** page, the Reviewer verifies the Business Address, Address Proof Details, and uploaded Address Proof documents, then clicks **Next**. On the **Branch & Meeting** page, the Reviewer verifies Branch Details, Branch Office Information, Meeting Details, and uploaded branch/site documents.

The Reviewer then enters remarks in the **Reviewer Remarks** field.

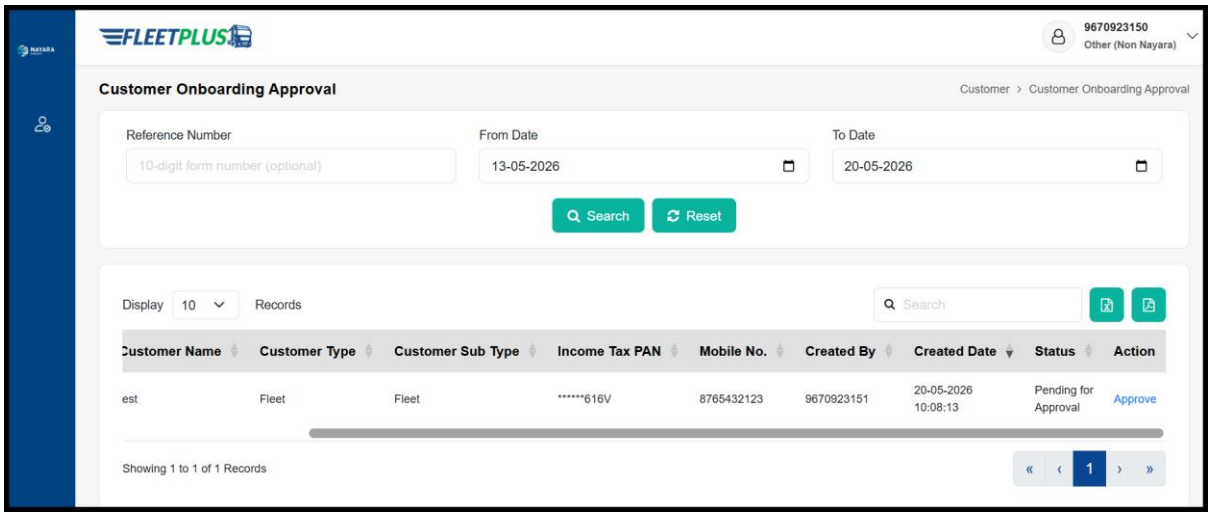

**Available Actions — Reviewed:** Marks the application as reviewed; a confirmation pop-up appears — click **OK**.

The application is then forwarded to the Approver (Checker) for final approval.

**Customer Approval Workflow**

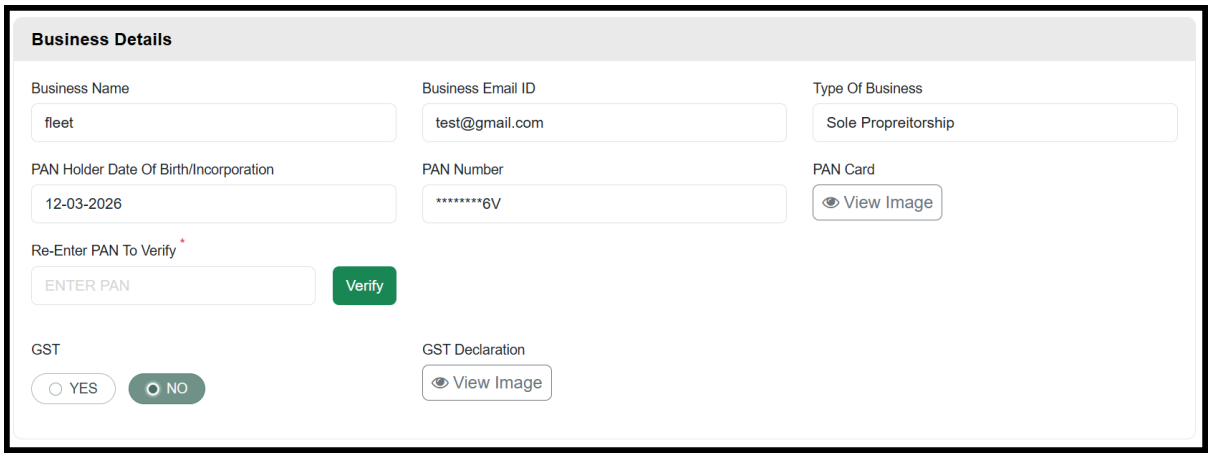

**Navigation Path:** This will only access to the authorized users of Nayara team.

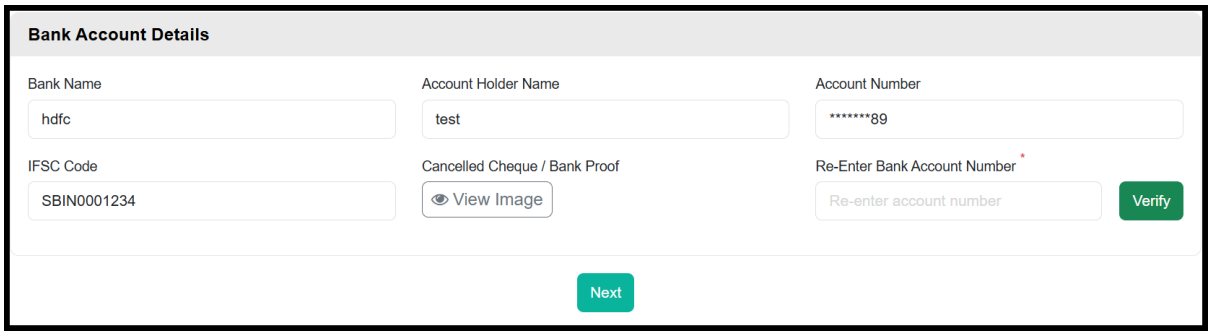

**Approval Process:** Locate the required request, click **Approve** in the Action column, and the submitted onboarding form opens for verification.

**Basic Information Verification** — verify all customer details entered during onboarding.

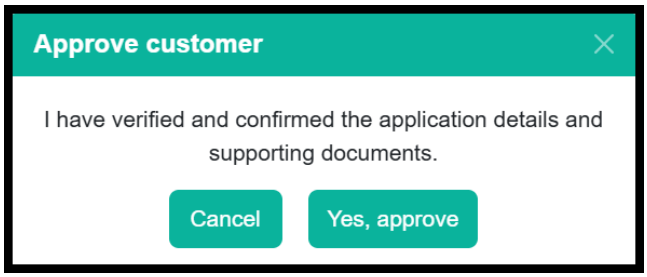

**Mandatory Verification:** as an additional security measure, the Approver must manually re-enter the **PAN Number** and **Bank Account Number**; the system validates these against the values submitted by the Maker.

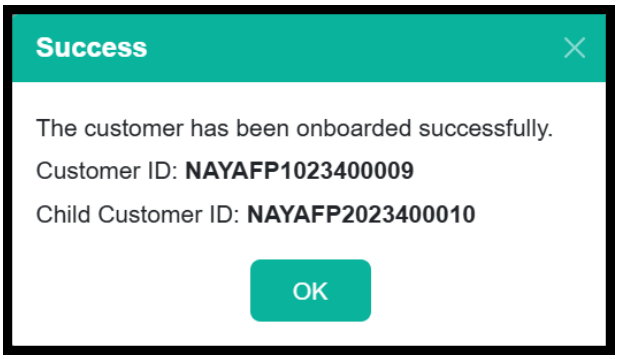

**Note:** the re-entered PAN Number and Bank Account Number must exactly match the submitted customer information. Click **Next** to continue to Address Verification (Business Address, Address Proof Details, uploaded documents), then Branch & Meeting Verification (Branch details, Branch office information, Non-fleet branch information if applicable, Meeting details, uploaded documents/photos).

**Approve:** approves the customer onboarding request.

A pop-up is displayed — click **"Yes, Approve"**.

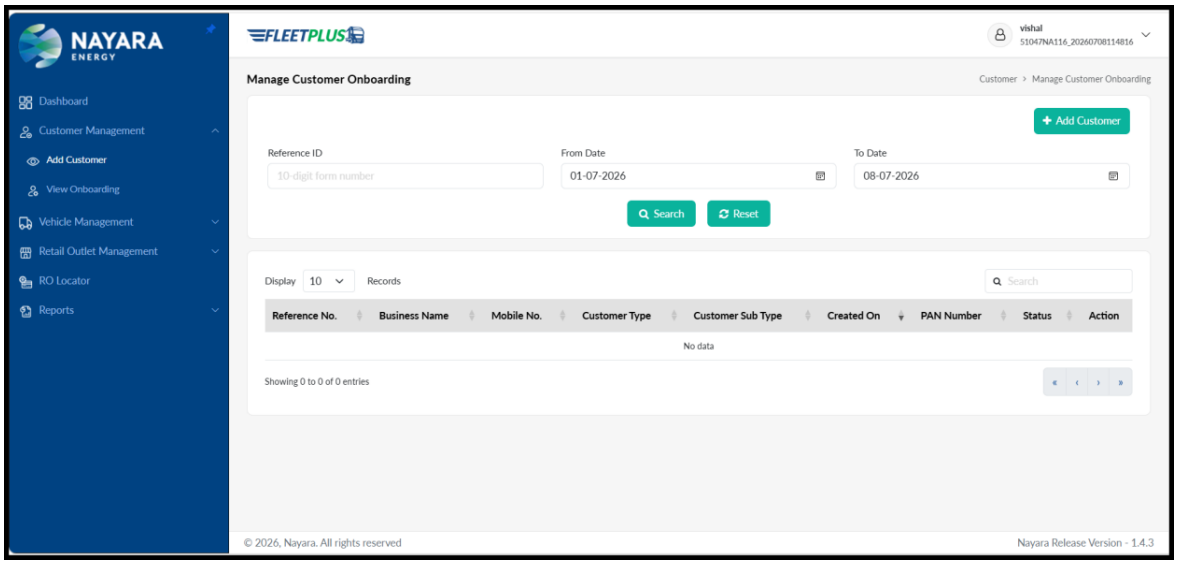

Once approved, the customer is onboarded into the system and both the parent and child customer IDs are created.

**Reject:** upon rejection by either the Reviewer or the Checker, the application is returned to the Maker with documented remarks indicating the reason. The Maker corrects the identified issues and resubmits the application through the same workflow for re-review and re-approval.

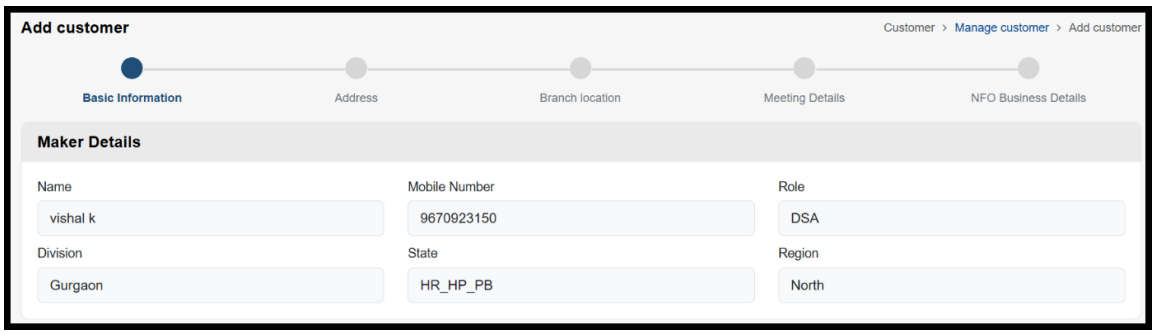

## 2.1.2 Customer Onboarding Form (For Non-Fleet)

**Navigation:** Customer Management → Add Customer

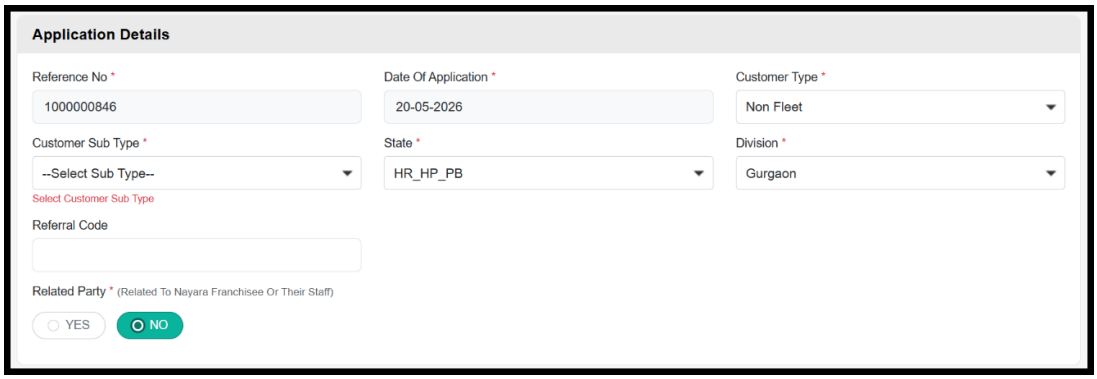

The onboarding form for a Non-Fleet (NFO) customer follows the same overall structure as the Fleet form — Maker Details, Application Details, Business Details, Customer Details, Customer Segmentation, Bank Account Details, Address Details, Branch Details, and Meeting Details — with the additional **NFO Business Details** and **RO Mapping Details** steps described below. Only the screens and fields that differ from the Fleet form are shown here.

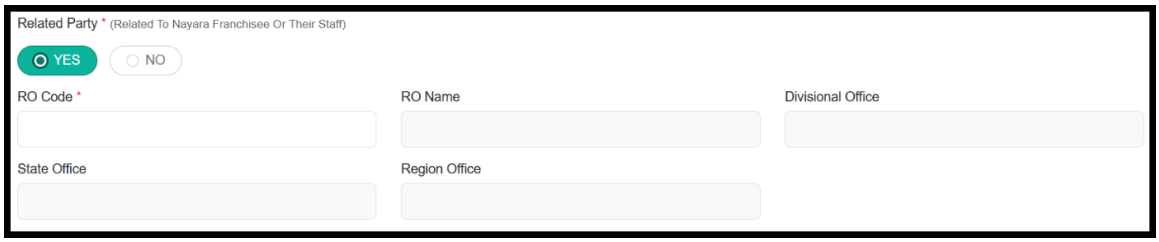

### Maker Details

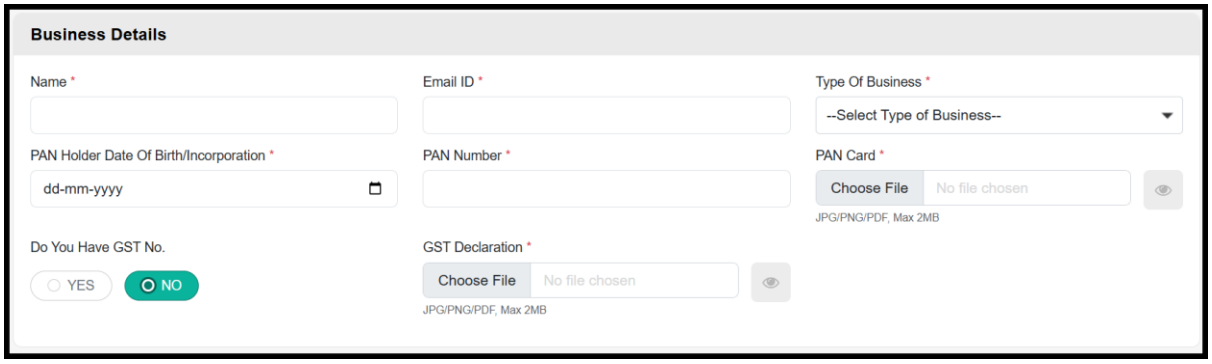

### Application Details

**Related Party:** Indicates whether the customer is related to Nayara Franchisee or staff (Yes/No). If **Yes**, additional related-party fields are unlocked, as shown below.

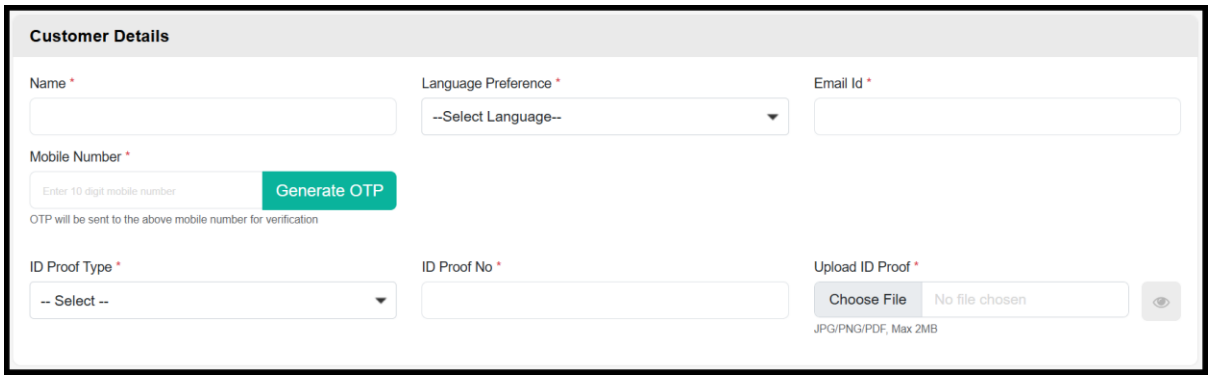

## Business Details

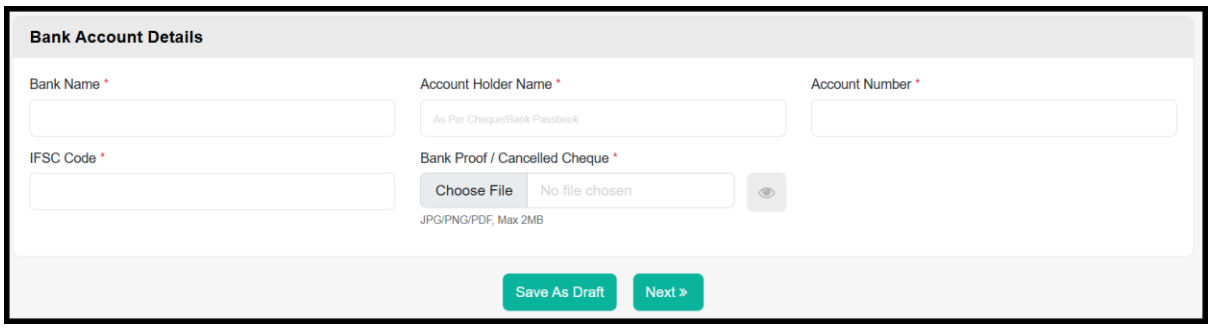

## Customer Details, Segmentation & Bank Account Details

These sections use the same fields, validations, and screens as the Fleet onboarding form (Customer Details, Mobile Number Verification/Validation, Customer Segmentation, and Bank Account Details).

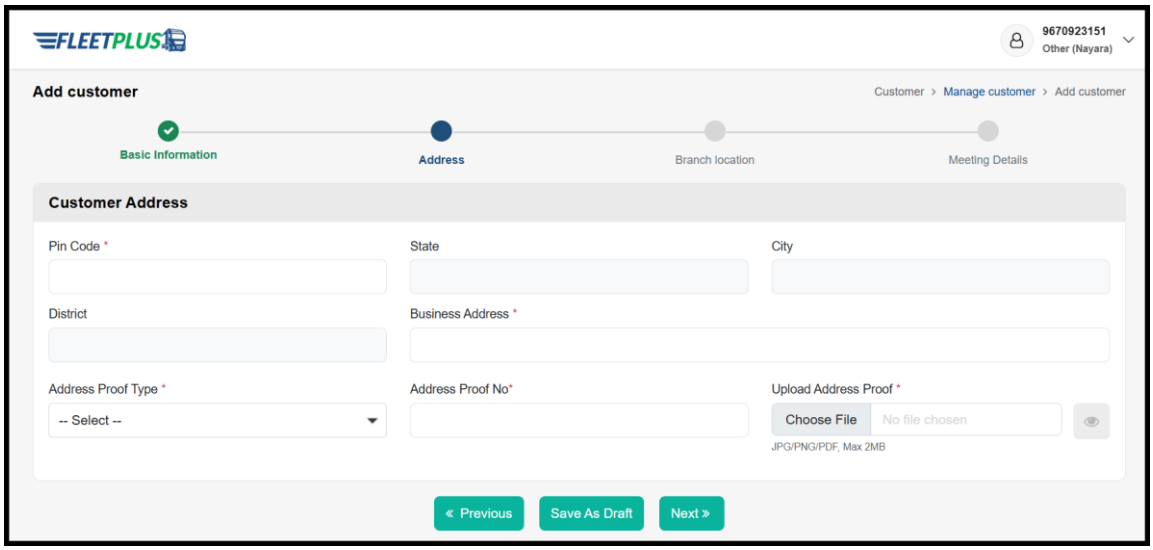

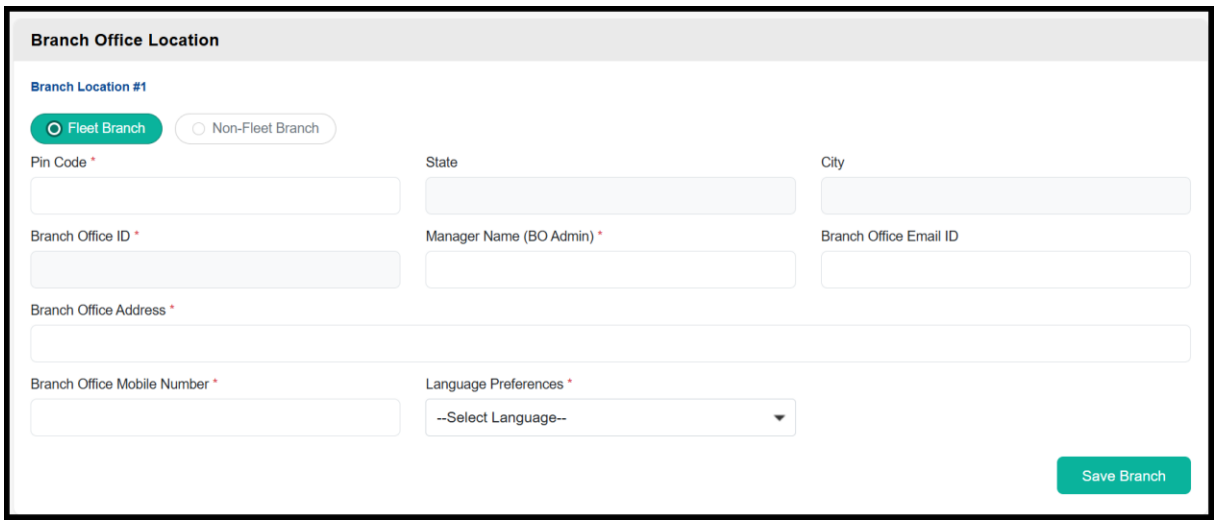

## Address Details

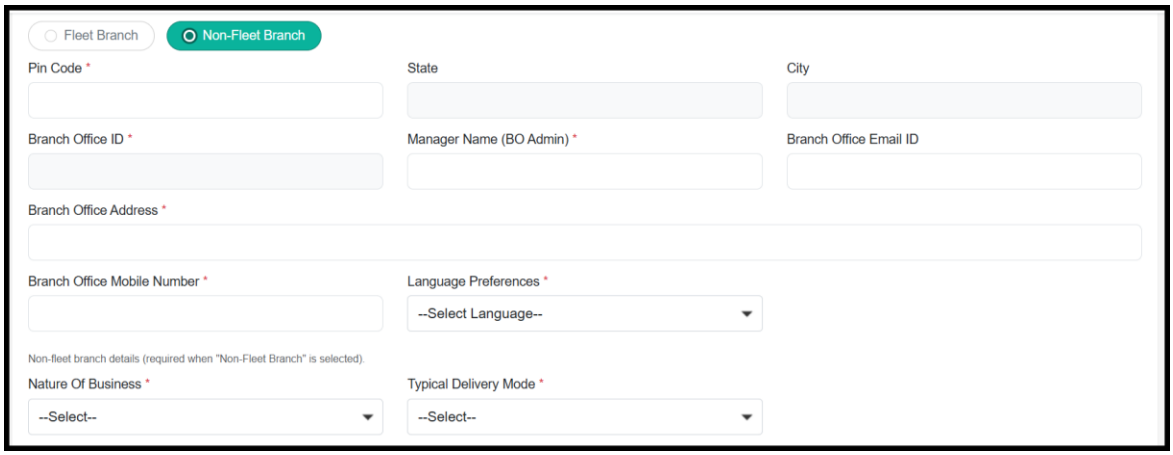

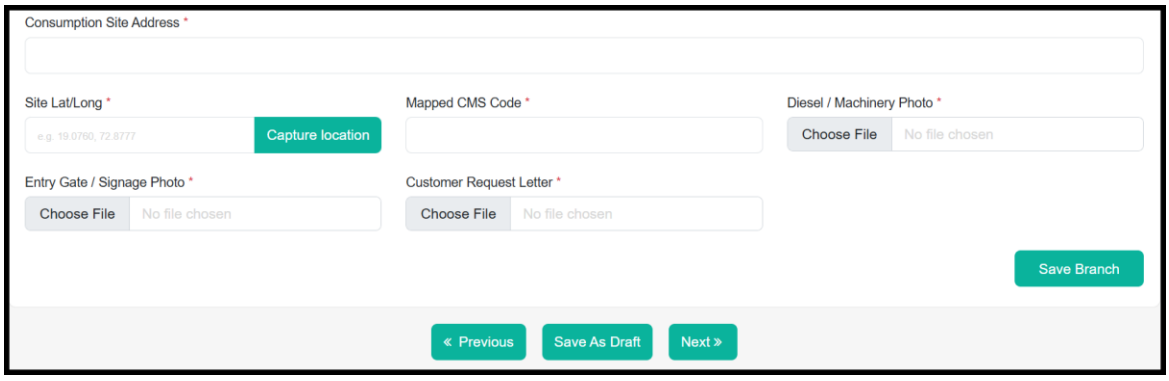

## Branch Details

**Fleet Branch Details** fields apply where the selected branch type is a fleet branch.

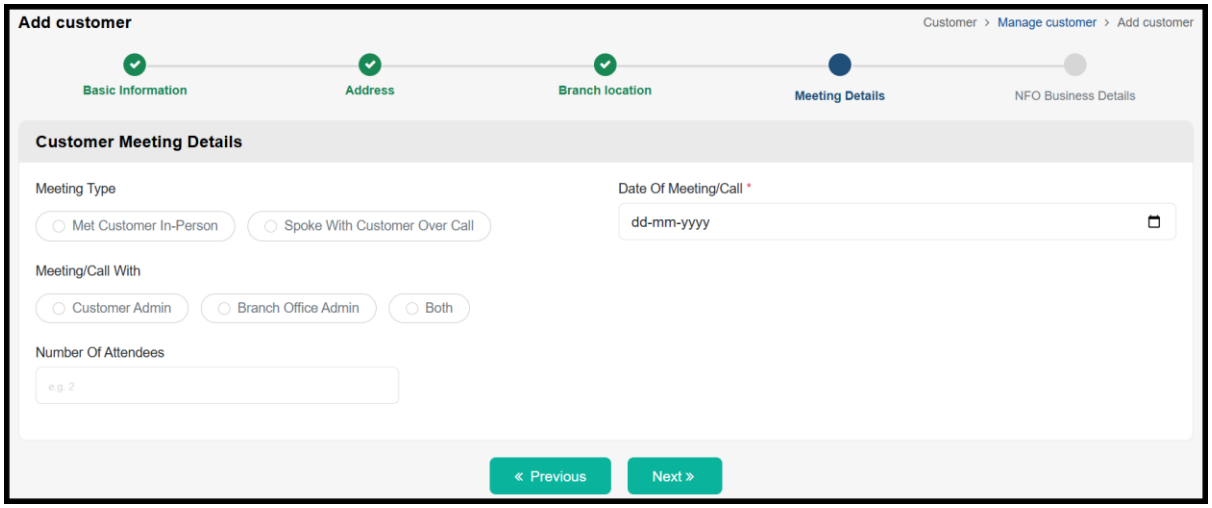

**Non-Fleet Branch Details:** additional information required when the branch type is Non-Fleet Branch.

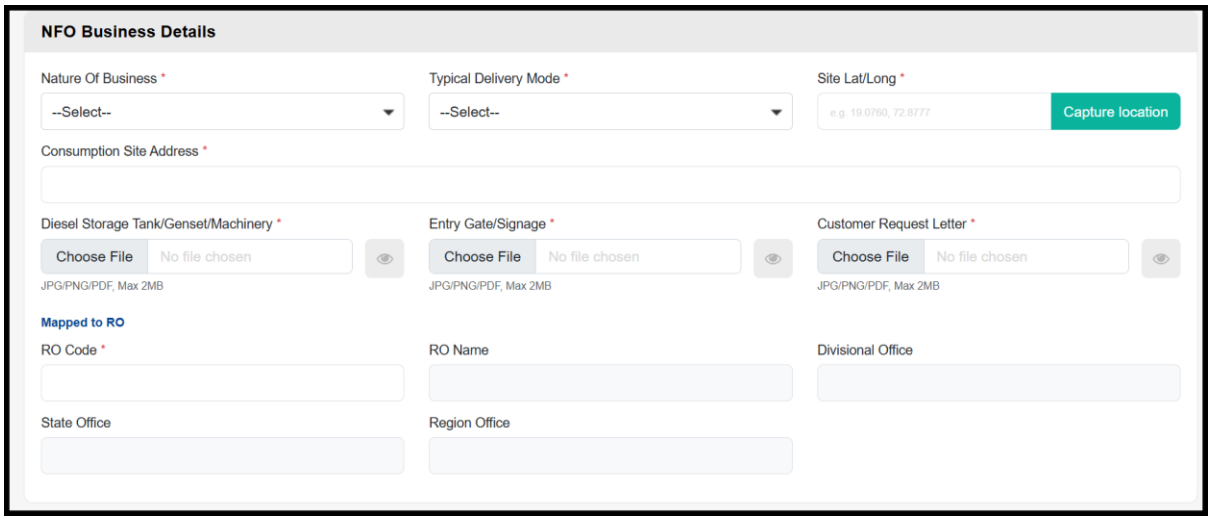

- Nature of Business
- Typical Delivery Mode
- Consumption Site Address
- Site Lat/Long
- Mapped CMS Code
- Diesel / Machinery Photo
- Entry Gate / Signage Photo
- Customer Request Letter

### Meeting Details

### NFO Business Details

For Non-Fleet Customer (NFO) onboarding, after completing the Meeting Details section and clicking **Next**, the **NFO Business Details** page opens.

Users must fill the following details:

- Nature of Business
- Typical Delivery Mode
- Site Lat/Long
- Consumption Site Address

**Document Uploads**

**Diesel Storage Tank / Genset / Machinery** — upload supporting image/document. Allowed formats: JPG / PNG / PDF. Maximum file size: 2 MB.

**Entry Gate / Signage** — upload supporting image/document. Allowed formats: JPG / PNG / PDF. Maximum file size: 2 MB.

**Customer Request Letter** — upload supporting document. Allowed formats: JPG / PNG / PDF. Maximum file size: 2 MB.

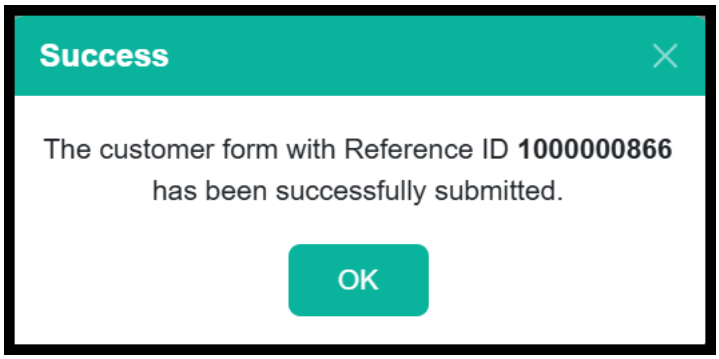

**RO Mapping Details**

Users must provide Retail Outlet (RO) mapping information:

- Mapped to RO
- RO Code
- RO Name
- Divisional Office
- State Office
- Region Office

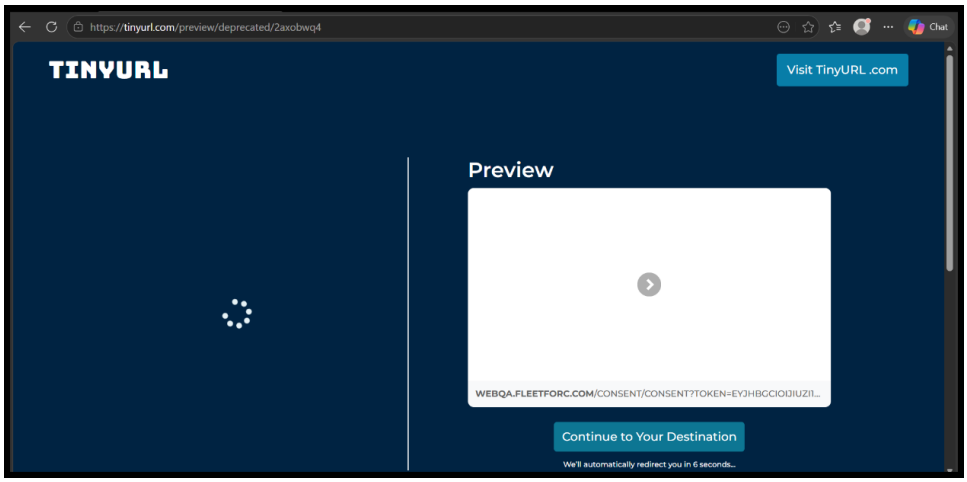

**Submit** — submits the completed onboarding form.

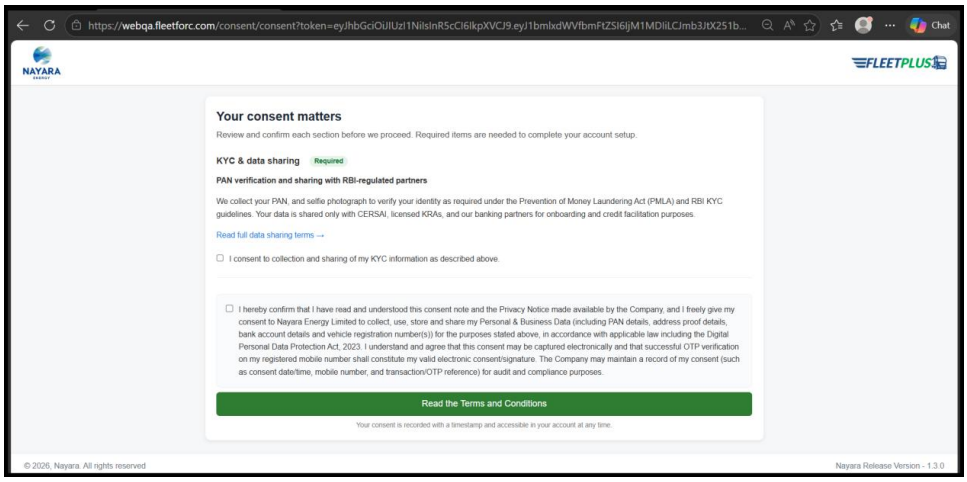

- Customer onboarding form is submitted successfully.
- Customer record is created in the system for further approval/processing.

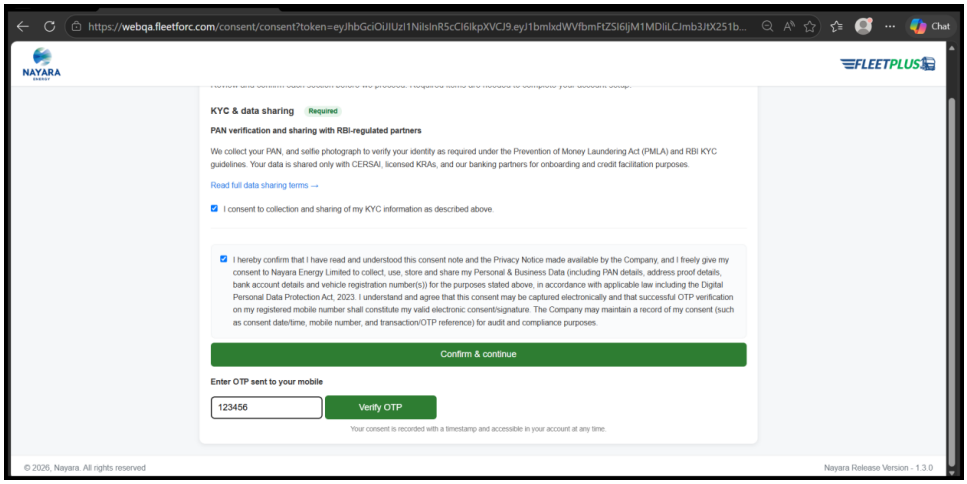

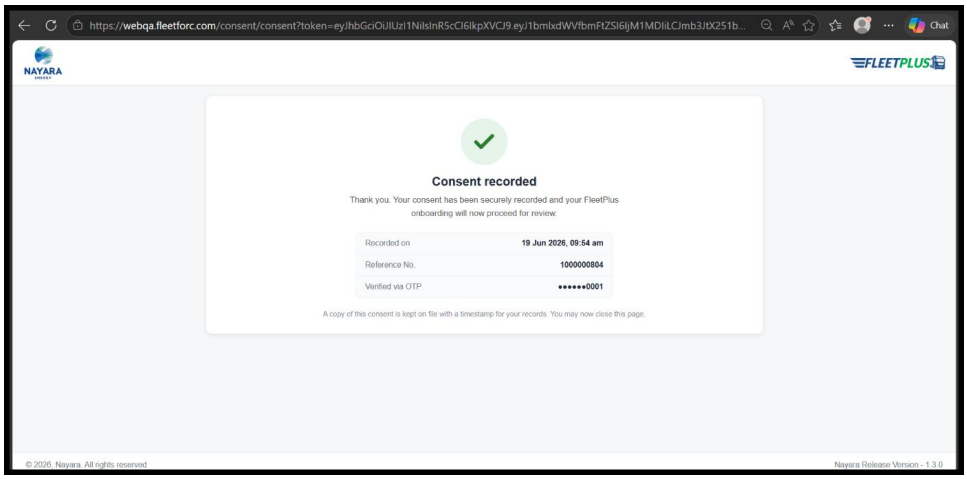

**Customer Consent**

The consent process for Non-Fleet customers is identical to the Fleet flow described above — the customer receives a consent link by SMS, reviews and acknowledges the consent declaration, verifies via OTP, and receives a confirmation with the Consent Status, Recorded Date and Time, Reference Number, Masked Mobile Number, and Verification Status.

## Reviewer Verification Process

**Navigation Path:** This will only access to the authorized users of Nayara team.

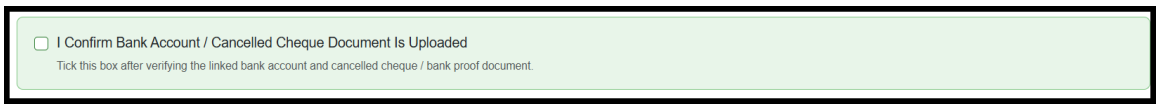

**Basic Information Verification:** verify customer details and the uploaded PAN card document.

- I confirm PAN card document is uploaded.

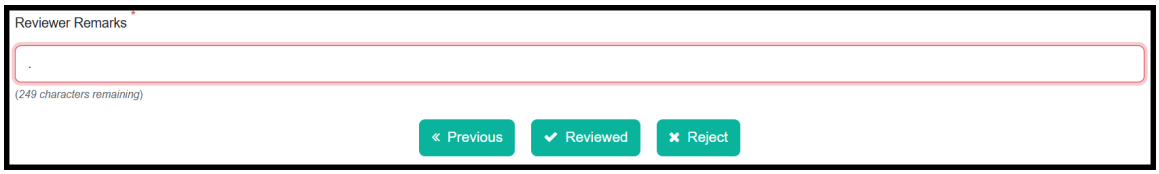

Scroll further and verify bank-related documents.

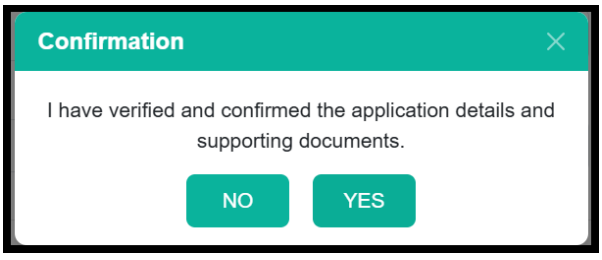

- I confirm bank account / cancelled cheque document is uploaded.

Click **Next** to move through Address Verification (Business Address, Address Proof Details, uploaded Address Proof documents), Branch & Meeting Verification (Branch Details, Branch Office Information, Meeting Details, uploaded branch/site documents), and **NFO Details Verification** (Nature of Business, Delivery Mode, Site Address, Latitude/Longitude, RO Mapping Details, uploaded photographs and request letter).

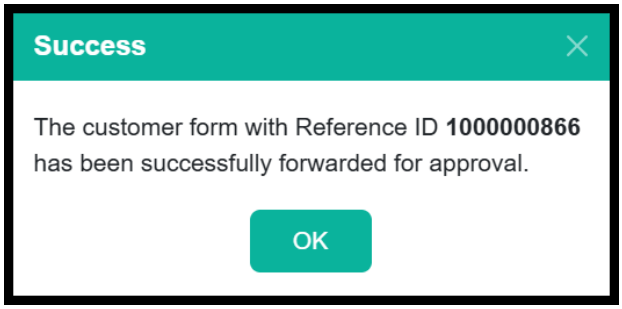

The Reviewer enters remarks in the **Reviewer Remarks** field.

**Reviewed:** marks the application as reviewed; click **OK** on the confirmation pop-up.

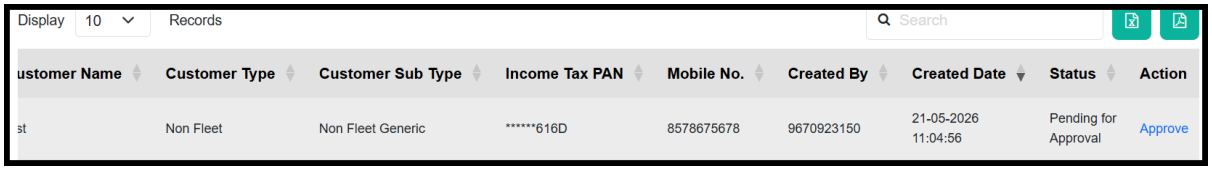

The application is forwarded to the Approver for final approval.

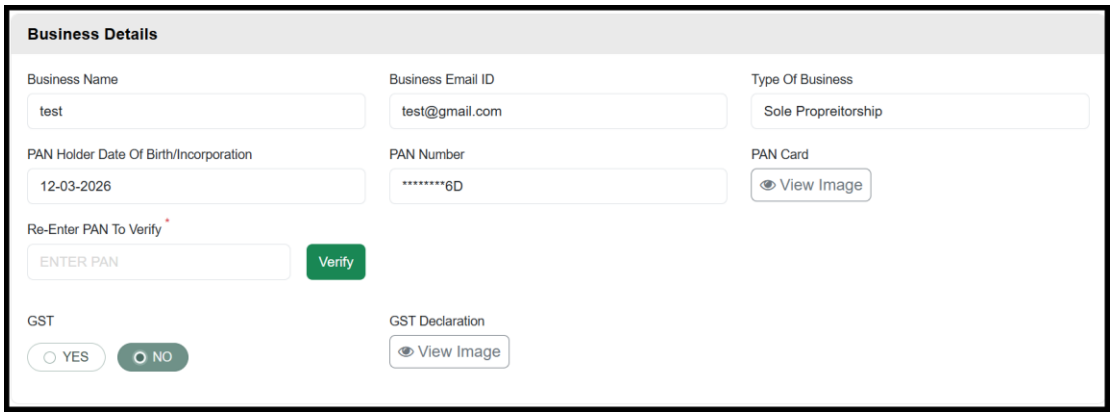

**Customer Approval Workflow**

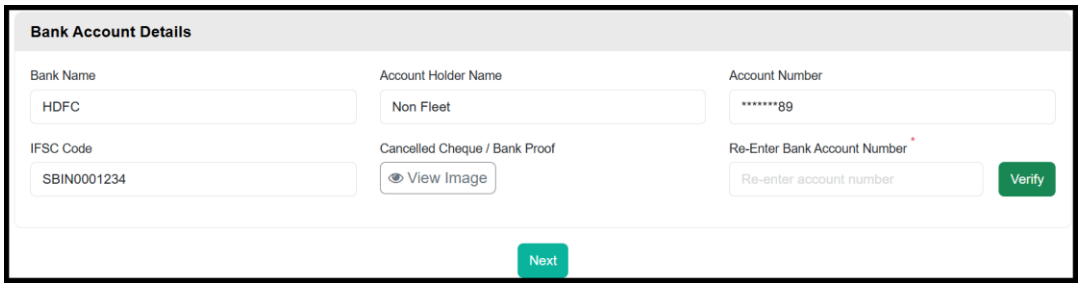

**Navigation Path:** This will only access to the authorized users of Nayara team.

**Approval Process:** locate the request, click **Approve**, and the submitted onboarding form opens for verification — Basic Information Verification, then Mandatory Verification (manually re-enter the **PAN Number**).

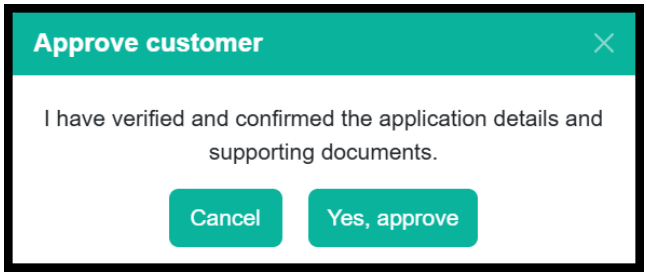

Re-enter the **Bank Account Number** for verification.

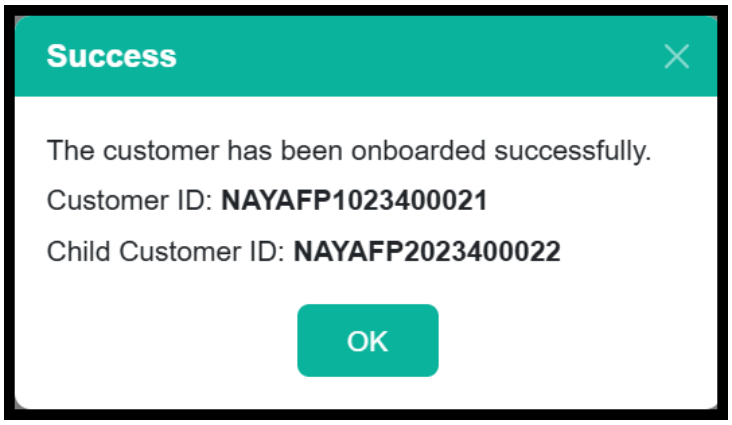

Click **Next** to continue through Address Verification and Branch & Meeting Verification (including Non-Fleet branch information, where applicable).

**Approve:** approves the customer onboarding request.

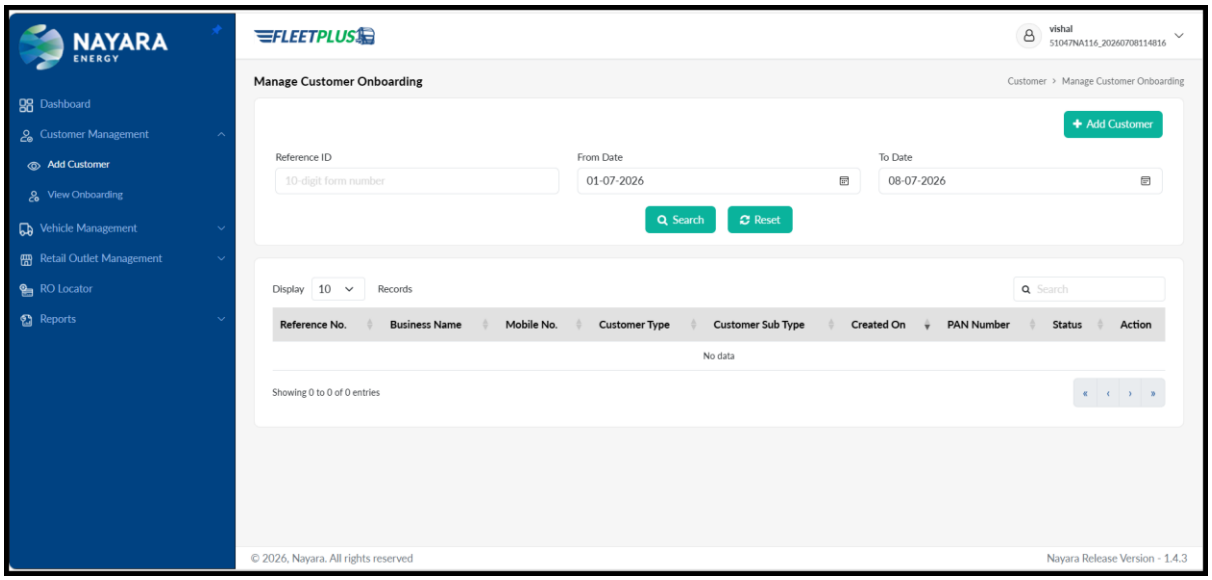

A pop-up is displayed — click **"Yes, Approve"**. The customer becomes active in the system.

**Reject:** upon rejection, the application is returned to the Maker with documented remarks for correction and resubmission.

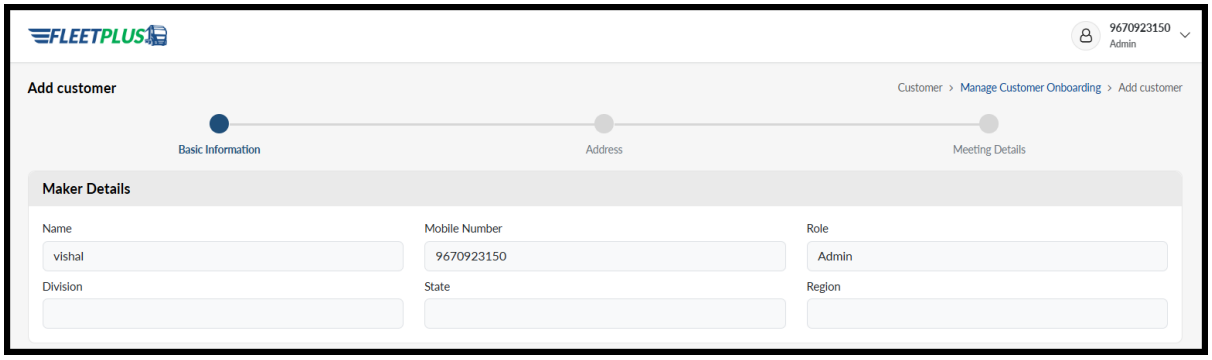

## 2.1.3 Customer Onboarding Form (For Corporate)

**Navigation:** Customer Management → Add Customer

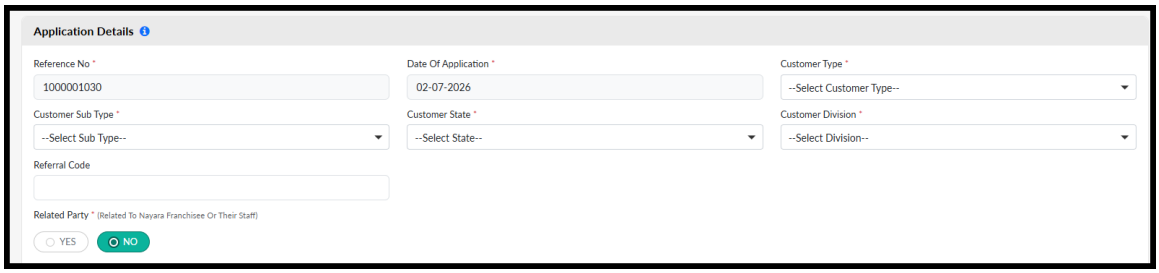

The Corporate onboarding form uses the same Maker Details, Application Details, Business Details, Customer Details, Customer Segmentation, and Bank Account Details steps as the Fleet form, but has **no Branch Details step** — after Bank Account Details, the form proceeds directly to Address Details and then Meeting Details.

### Maker Details

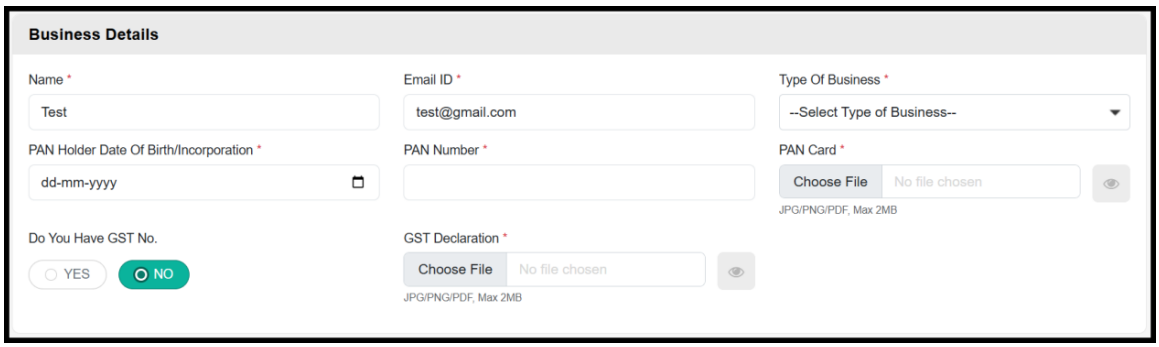

### Application Details, Business Details & Customer Details

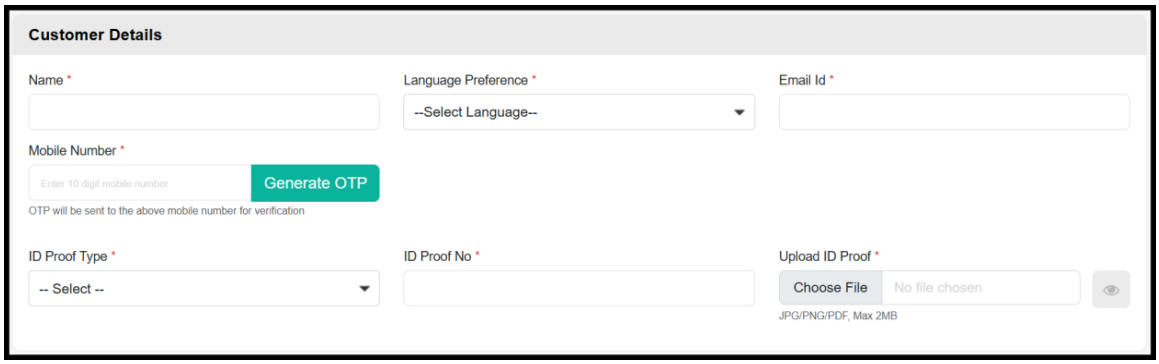

These sections reuse the same fields and screens described under the Fleet onboarding form.

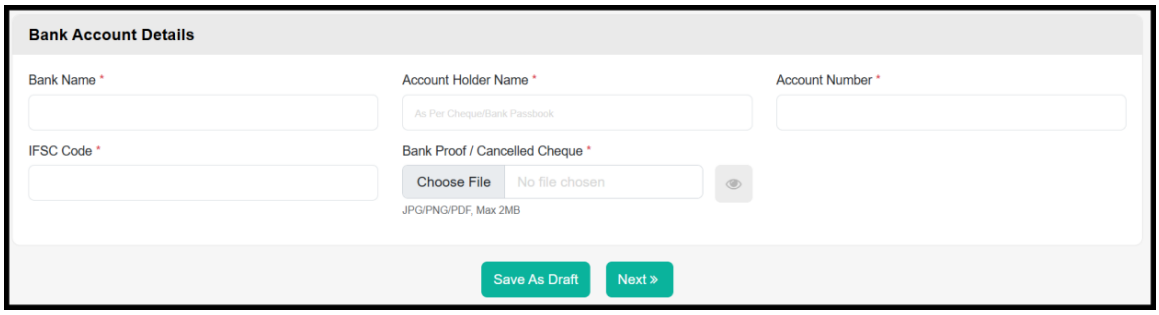

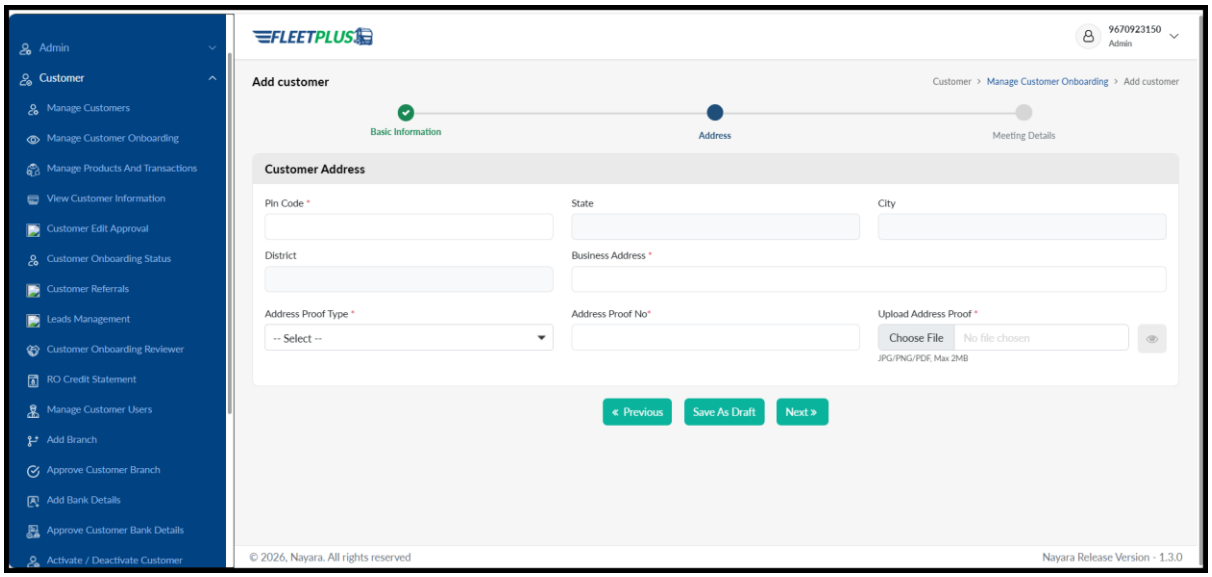

## Customer Segmentation & Bank Account Details

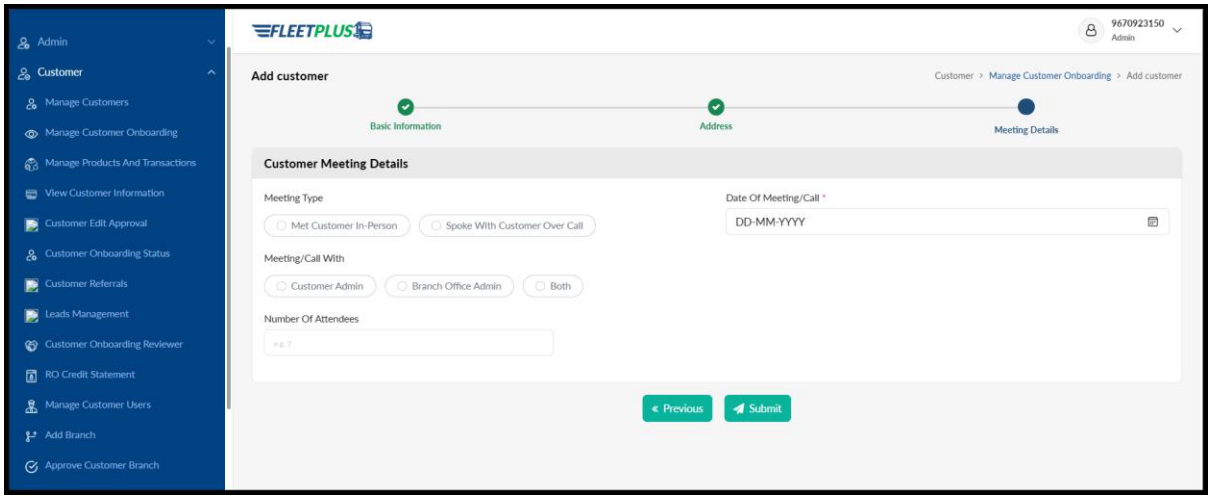

## Address Details

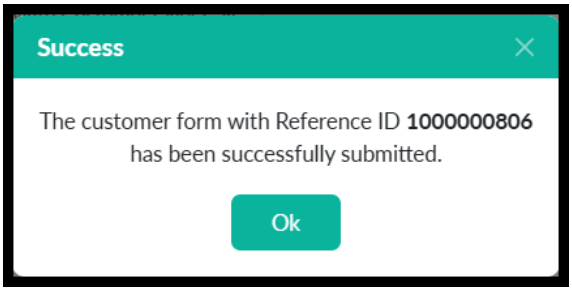

## Meeting Details

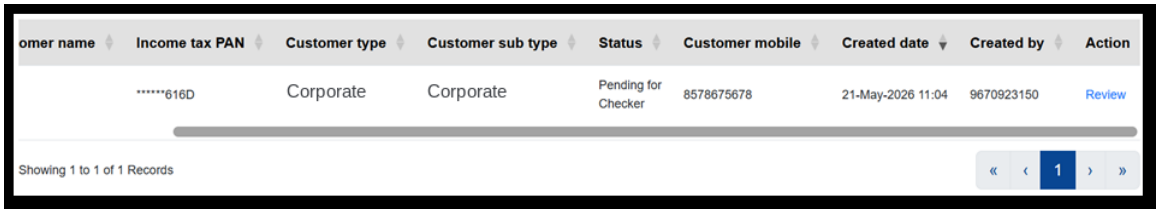

**Submit** — submits the completed onboarding form.

- Customer onboarding form is submitted successfully.
- Customer record is created in the system for further approval/processing.

## Customer Consent, Reviewer Verification & Approval Workflow

The Consent, Reviewer Verification, and Approval processes for Corporate customers follow the same steps described earlier: the customer confirms consent via an OTP-verified link, the Reviewer verifies the application details and documents, and the Approver re-verifies the PAN Number and Bank Account Number before approving.

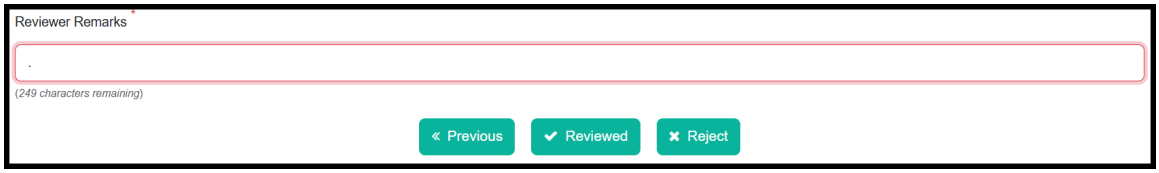

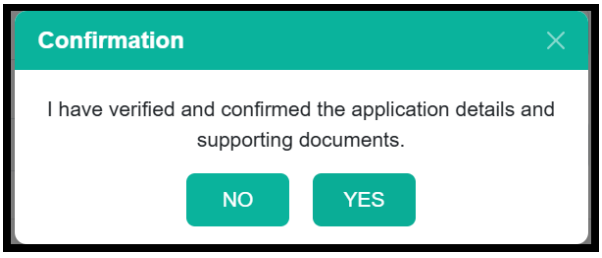

- I confirm PAN card document is uploaded.

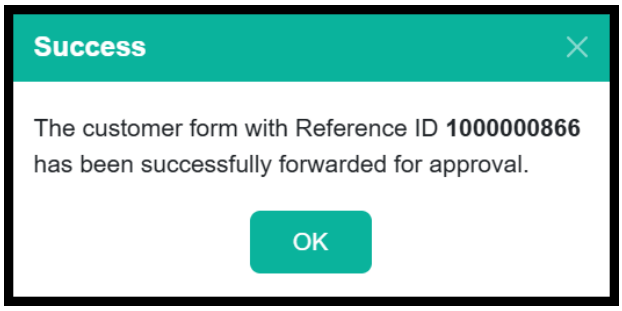

- I confirm bank account / cancelled cheque document is uploaded.

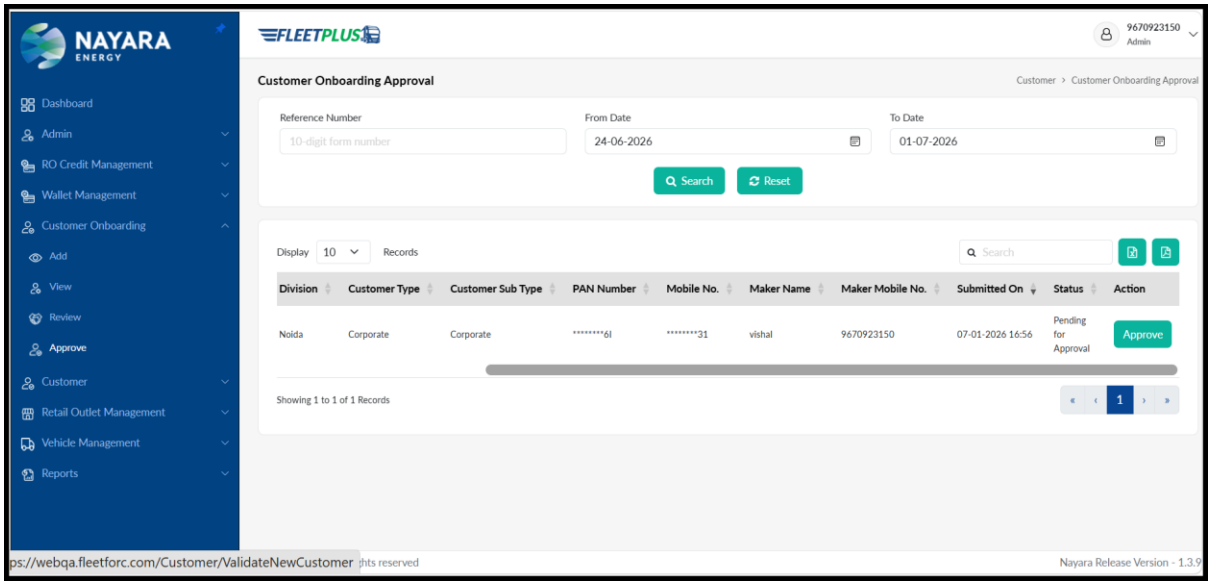

**Reviewed:** click **OK** on the confirmation pop-up; the application is forwarded to the Approver.

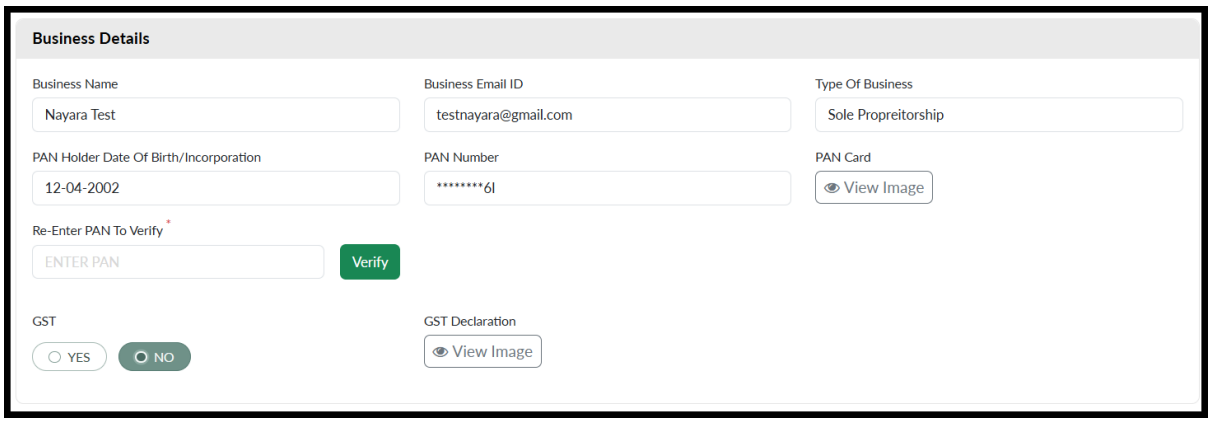

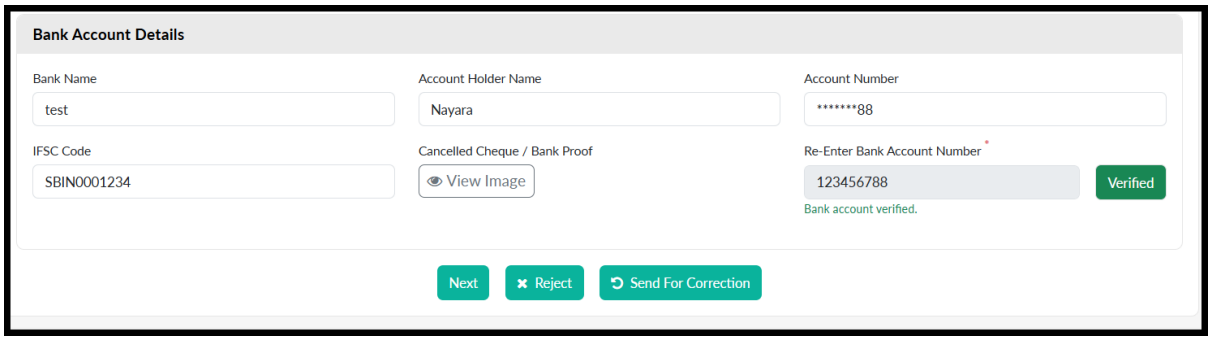

**Navigation Path:** This will only access to the authorized users of Nayara team.

**Mandatory Verification:** re-enter the **PAN Number** for verification.

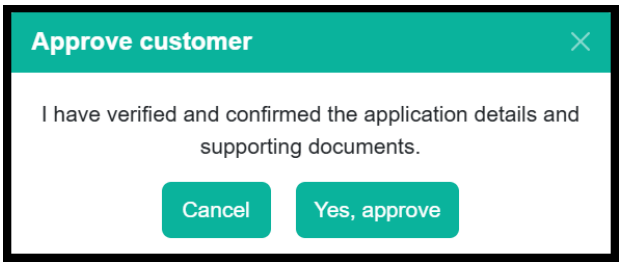

Re-enter the **Bank Account Number** for verification.

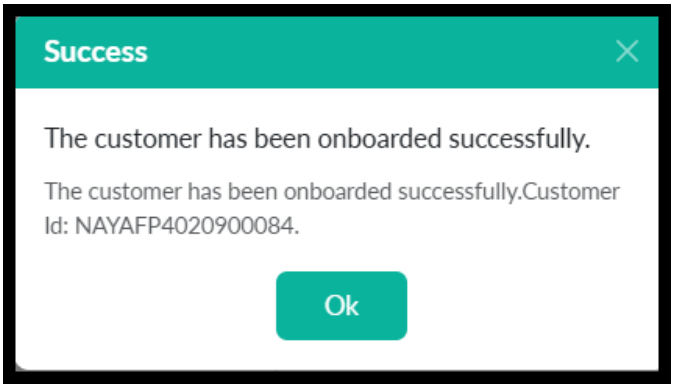

Click **Next** through Address Verification and Meeting Verification.

**Approve:** approves the customer onboarding request.

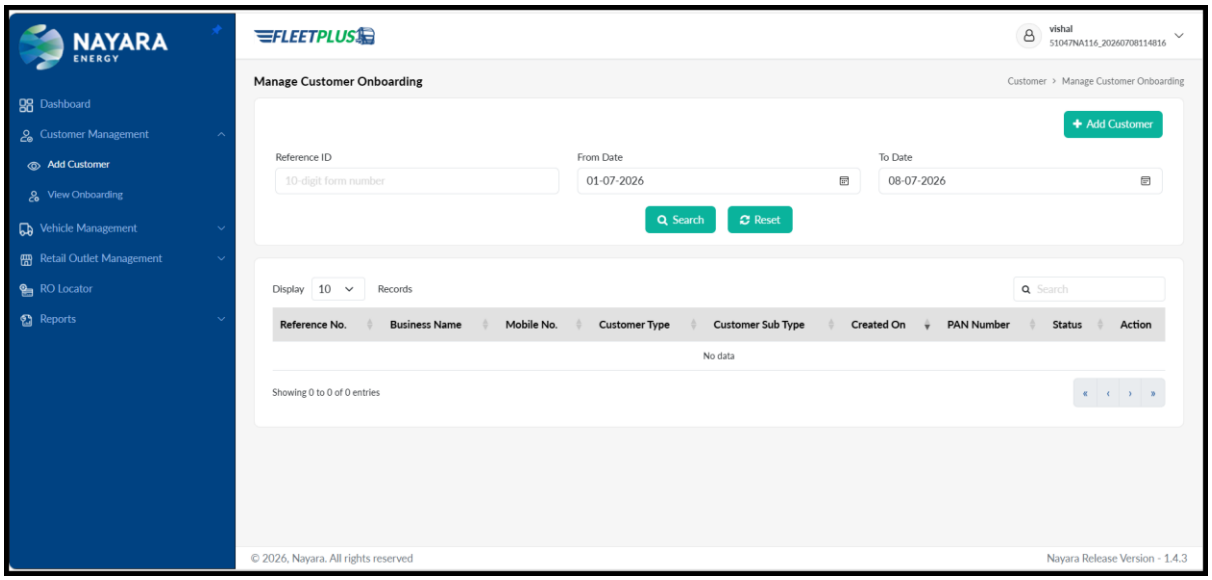

A pop-up is displayed — click **"Yes, Approve"**. The customer becomes active in the system.

**Reject:** upon rejection, the application is returned to the Maker with documented remarks for correction and resubmission.

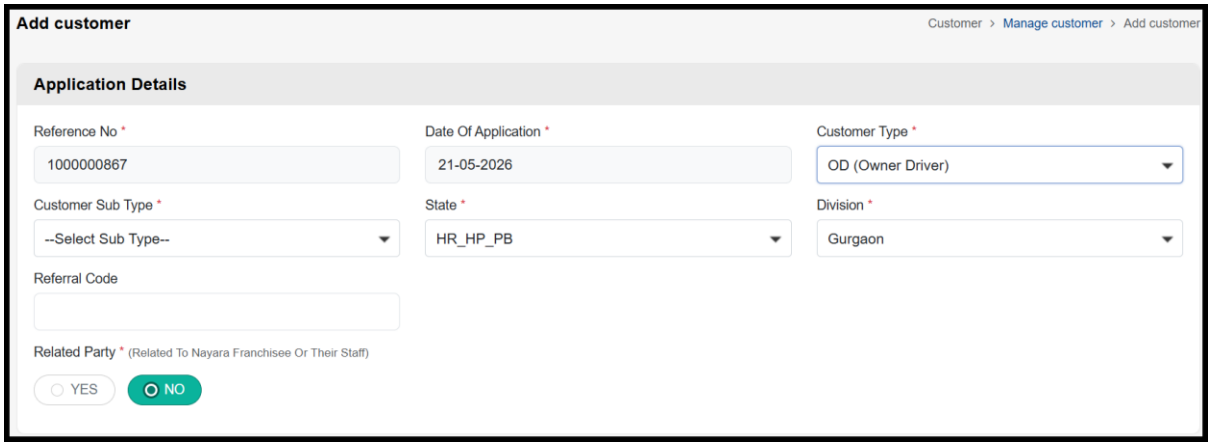

## 2.1.4 Customer Onboarding Form (For Owner Driver)

**Navigation:** Customer Onboarding → Add → Add Customer

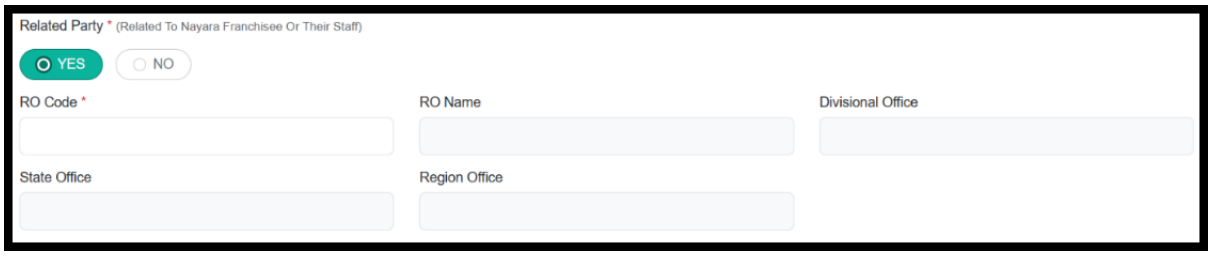

The Owner Driver (OD) onboarding form is the simplest of the four — it captures only **Application Details**, **Customer Details**, and **Bank Account Details**; there are no Business, Segmentation, Address, Branch, or Meeting Details steps.

### Application Details

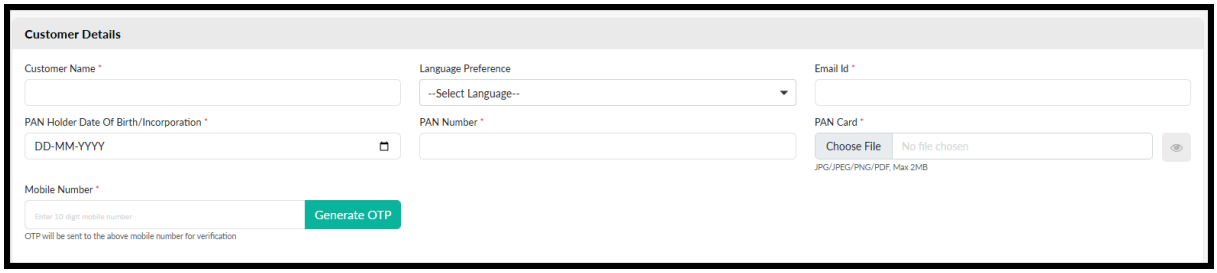

**Related Party:** Indicates whether the customer is related to Nayara Franchisee or staff (Yes/No). If **Yes**, additional related-party fields are unlocked, as shown below.

**Customer Details**

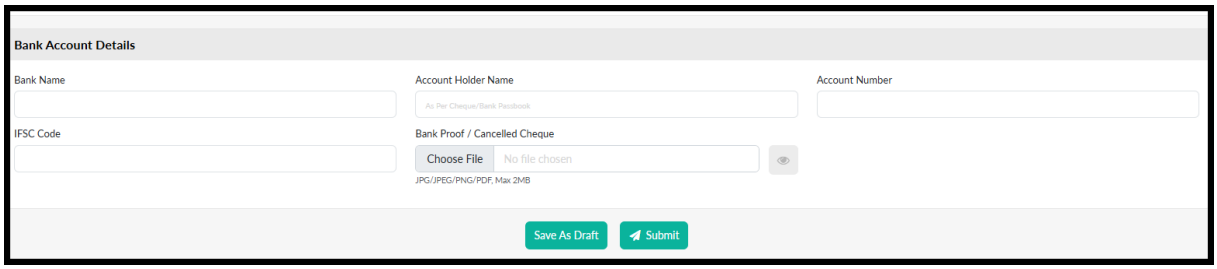

| Field | Description |
|---|---|
| **Name** | Enter the customer's full name. |
| **Language Preference** | Select the preferred communication language. |
| **Email ID** | Enter the customer's email address. |
| **PAN Holder Date of Birth/Incorporation** | Enter the PAN holder's Date of Birth or the organization's Date of Incorporation. |
| **PAN Number** | Enter the Permanent Account Number (PAN). The system enforces uniqueness of PAN — **duplicate PAN** registrations are **rejected** at the point of entry. |
| **PAN Card** | Upload the PAN Card document (JPG, PNG, PDF). |
| **Mobile Number** | Enter the customer's registered 10-digit mobile number. |

**Mobile Number Verification/Validation:** same OTP-based process as described for the Fleet onboarding form — the mobile number must be a valid 10-digit number, OTP verification is mandatory, and duplicate mobile numbers are not permitted.

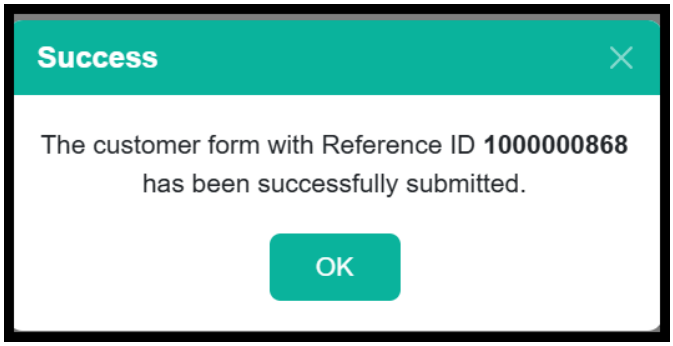

**Bank Account Details**

| Field | Description |
|---|---|
| **Bank Name** | Enter the customer's bank name. |
| **Account Holder Name** | Enter the account holder's name exactly as it appears on the cheque or bank passbook. |
| **Account Number** | Enter the customer's bank account number. |
| **IFSC Code** | Enter the bank's IFSC Code. |
| **Bank Proof / Cancelled Cheque** | Upload a cancelled cheque or other valid bank proof. |

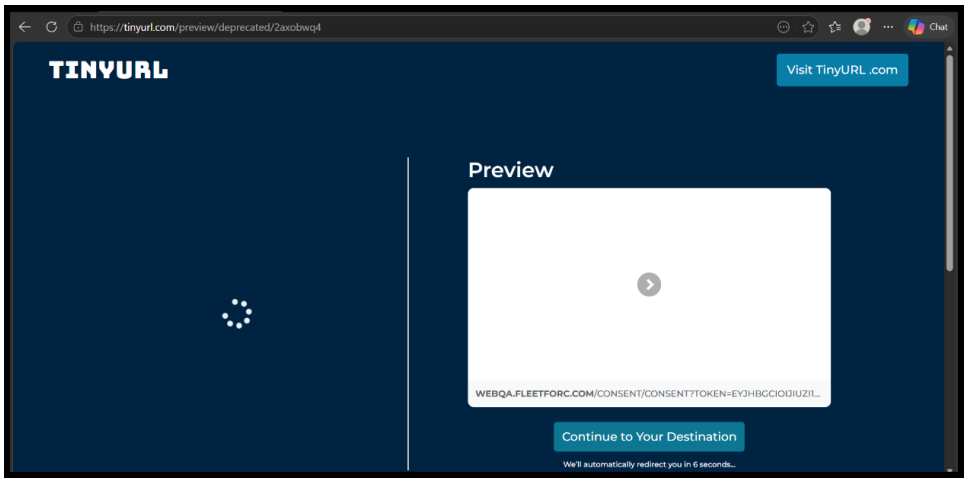

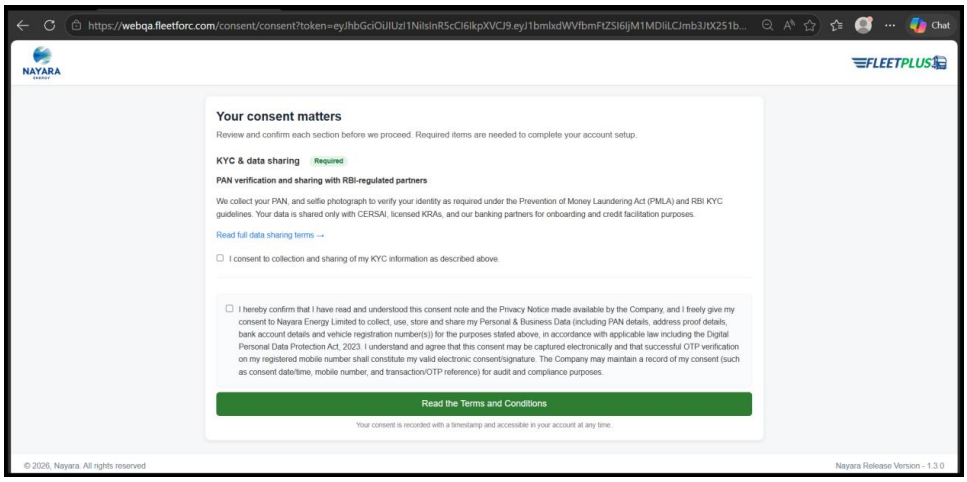

**Save as Draft / Next** work the same way as in the other onboarding forms. **Submit** — submits the completed onboarding form.

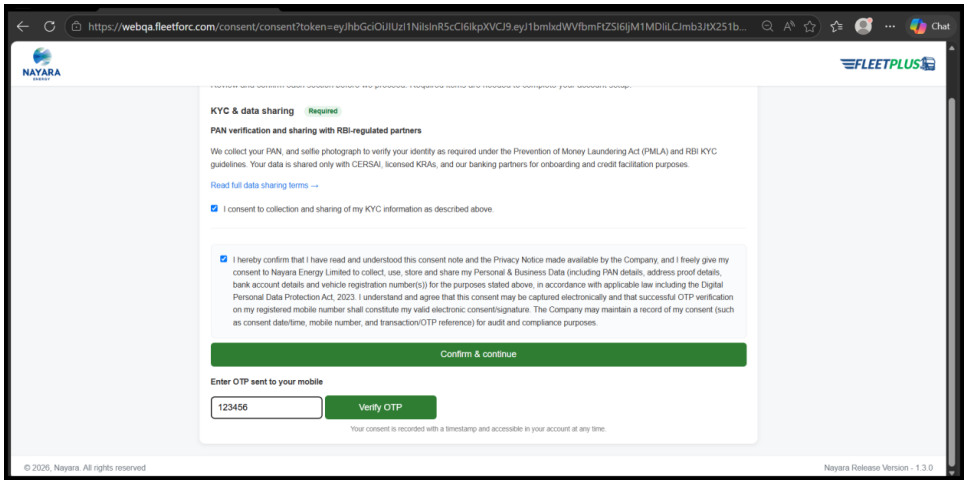

- Customer onboarding form is submitted successfully.
- Customer record is created in the system for further approval/processing.

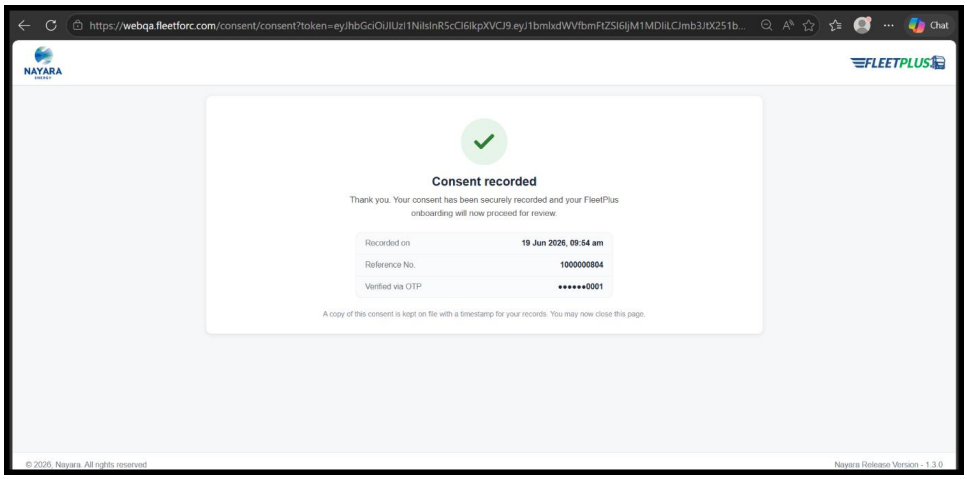

**Customer Consent**

## Reviewer Verification Process

**Navigation Path:** This will only access to the authorized users of Nayara team.

| omer name | Income tax PAN | Customer type | Customer sub type | Status | Customer mobile | Created date | Created by | Action |
|---|---|---|---|---|---|---|---|---|
| mer Driver | ******616X | OD (Owner Driver) | OD (Owner Driver) | Pending for Checker | 8567865678 | 21-May-2026 11:47 | 9670923150 | Review |

**Basic Information Verification:** verify customer details and the uploaded PAN card document.

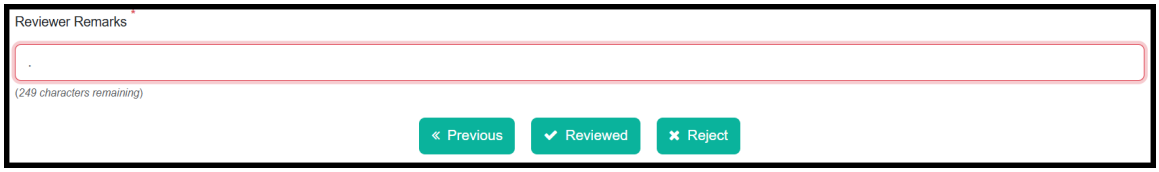

- I confirm PAN card document is uploaded.

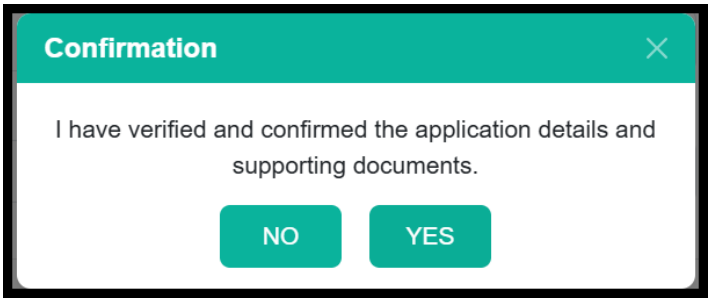

Scroll further and verify bank-related documents.

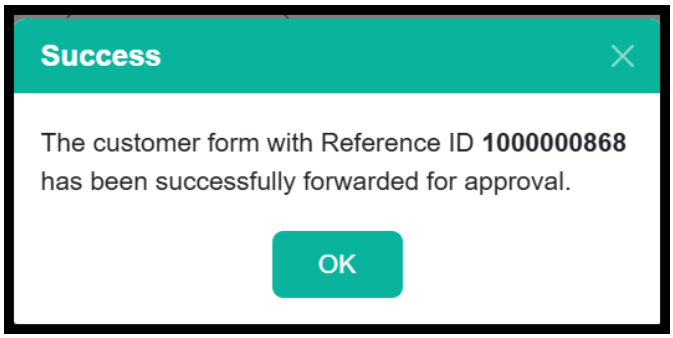

- I confirm bank account / cancelled cheque document is uploaded.

The Reviewer enters remarks and clicks **Reviewed**; a confirmation pop-up appears — click **OK**. The application is then forwarded to the Approver.

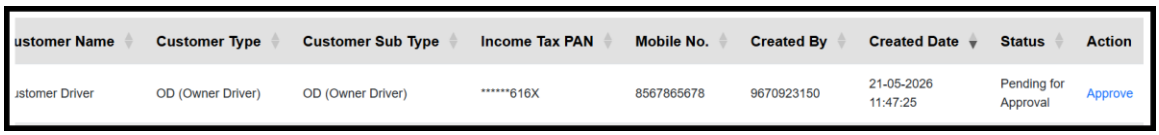

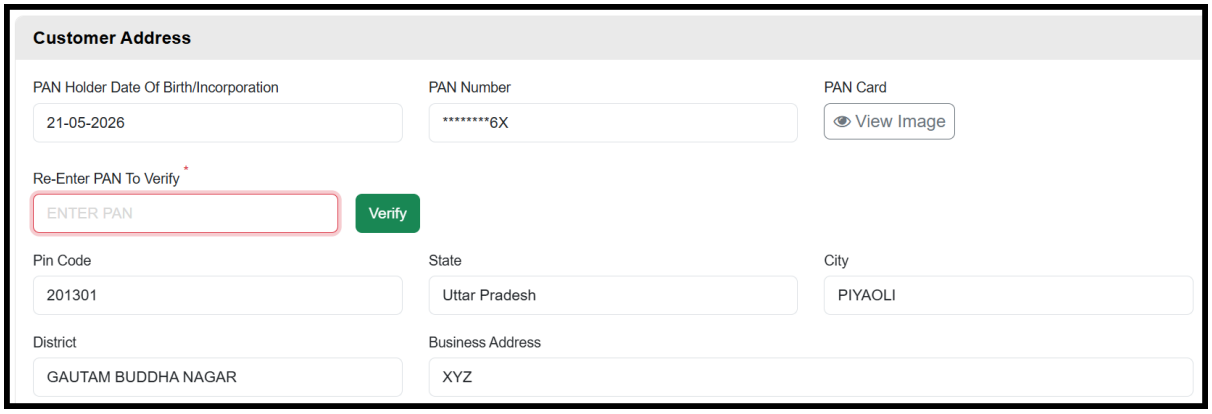

**Customer Approval Workflow**

**Navigation Path:** This will only access to the authorized users of Nayara team.

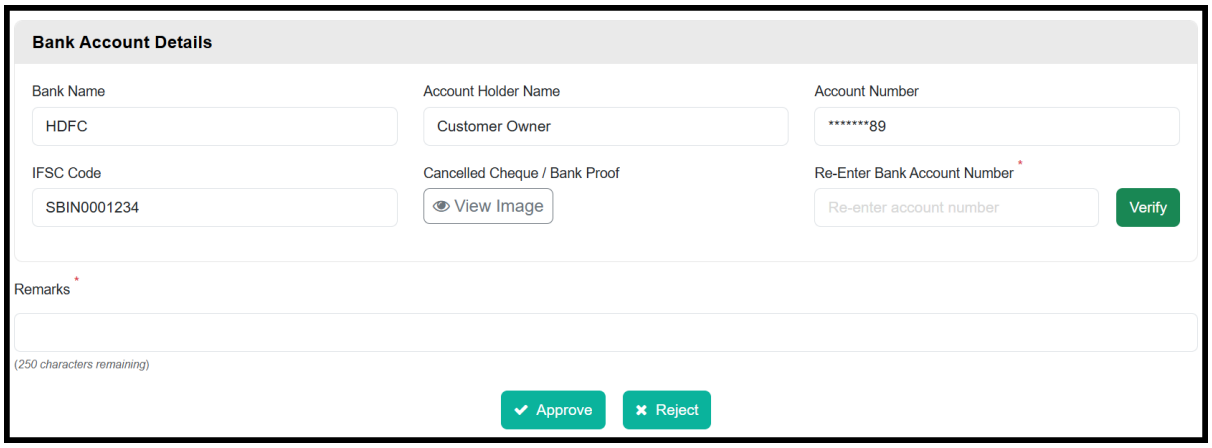

**Approval Process:** locate the request, click **Approve**, and verify the Basic Information.

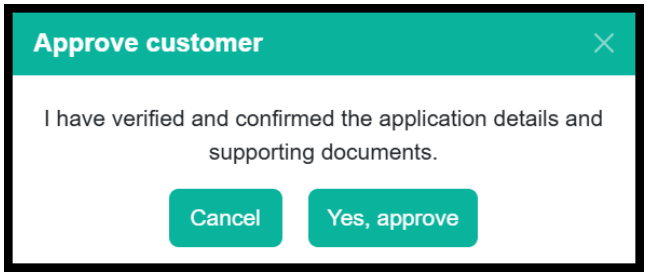

**Mandatory Verification:** the Checker can view the masked PAN Card uploaded by the customer and must re-enter the **PAN Number** for verification.

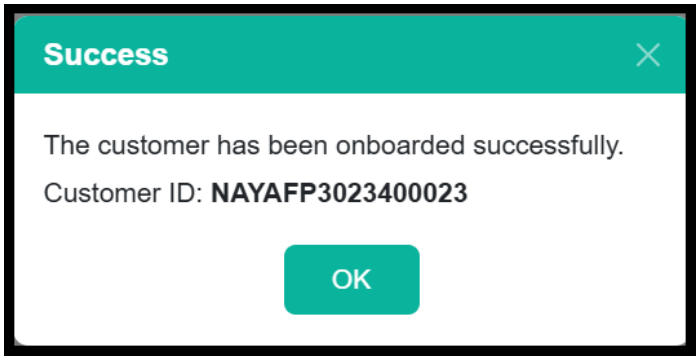

The Checker can view the masked Bank documents uploaded by the customer and must re-enter the **Bank Account Number** for verification.

**Approve:** approves the customer onboarding request.

A pop-up is displayed — click **"Yes, Approve"**. The customer becomes active in the system.

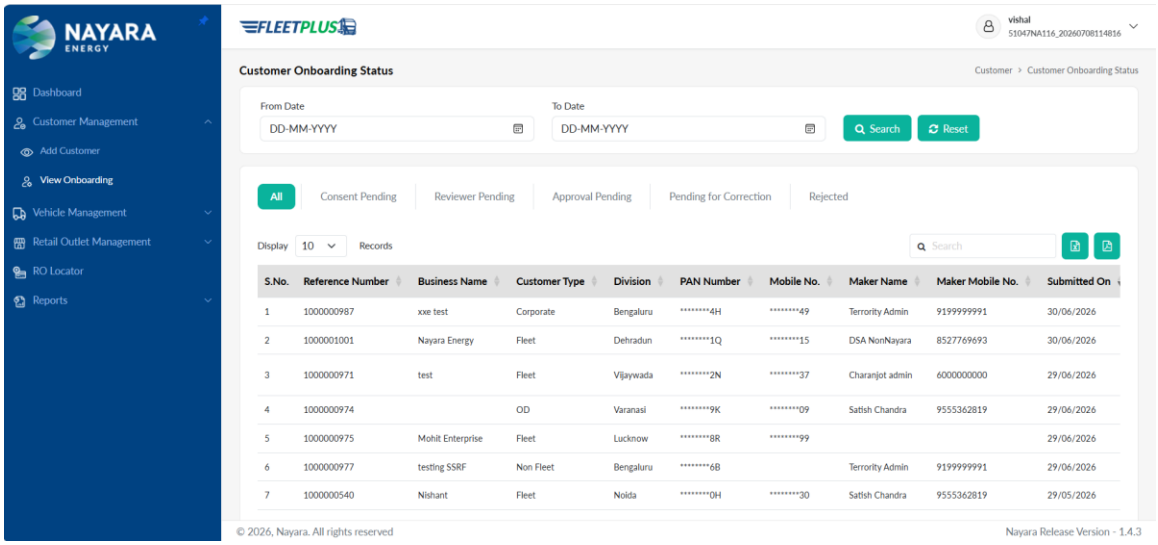

**Reject:** rejects the onboarding request if discrepancies are found; remarks may be added for audit/reference purposes.

## 2.2 View Onboarding

The View Onboarding screen allows authorized users to search, view, and monitor customer onboarding requests submitted through the Customer Management module. Users can filter onboarding records based on various search criteria and review the complete application details, supporting documents, and current onboarding status.

Navigation Path:

Customer Management → View Onboarding

The page displays all onboarding requests along with their current processing status. Users can search for specific applications using the available filters and view detailed information by selecting the corresponding record.

Vehicle Management

The Vehicle Management module is used to register vehicles against a customer, either one at a time or in bulk, and to search/view previously registered vehicles. It has two sub-sections:

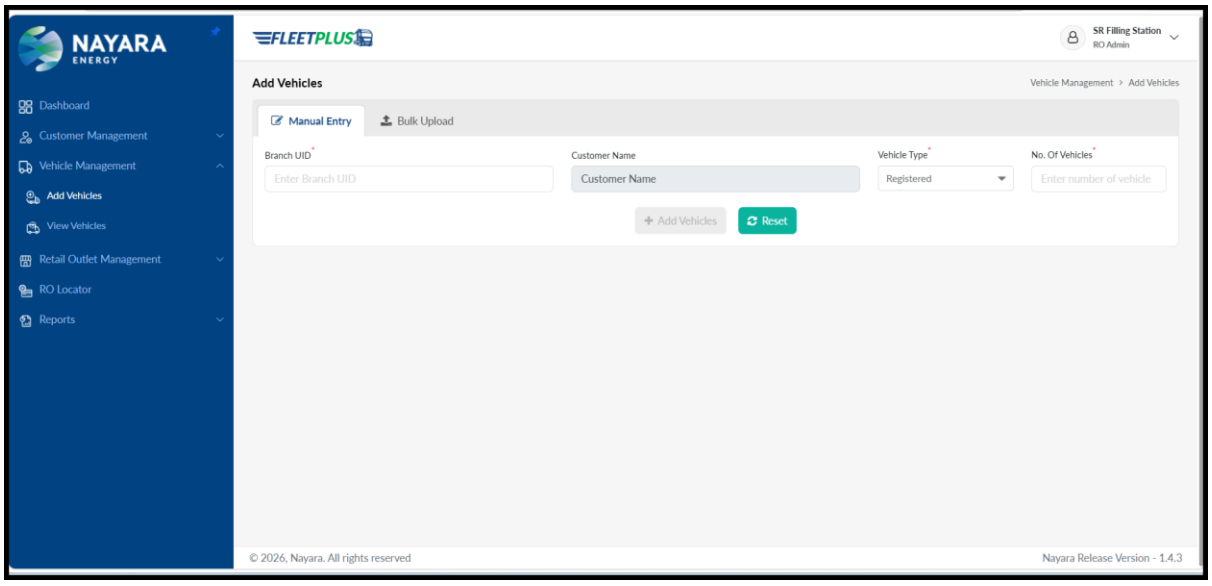

6. Add Vehicle
7. View Vehicle

## 2.3 Add Vehicle

**Navigation Path:** Vehicle Management → Add Vehicles

### 2.3.1 Manual Entry

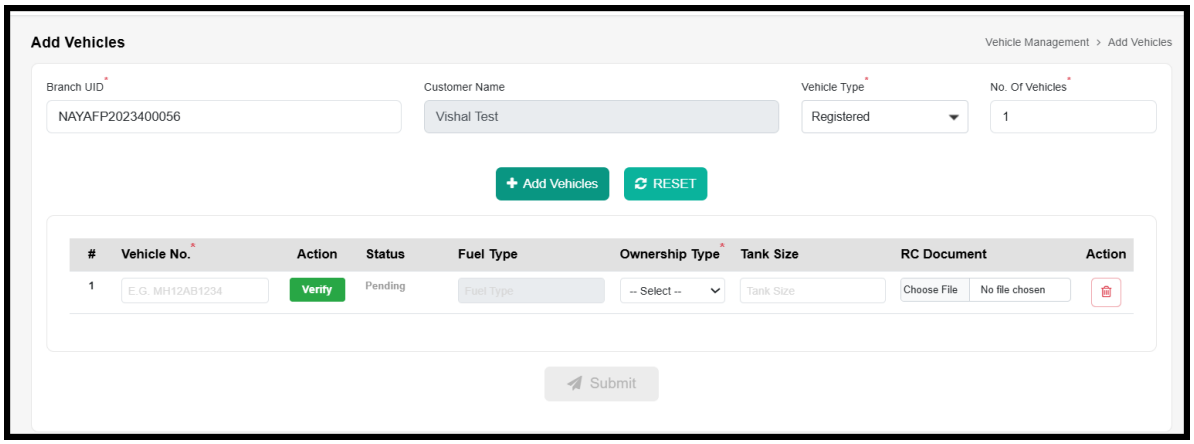

When the page loads, the user is required to fill in the following fields:

**Branch UID** is a mandatory field where the user enters the unique identifier of the branch office under which the vehicle is to be added. Upon entering a valid Branch UID, the **Customer Name** field gets auto-populated and is displayed as read-only.

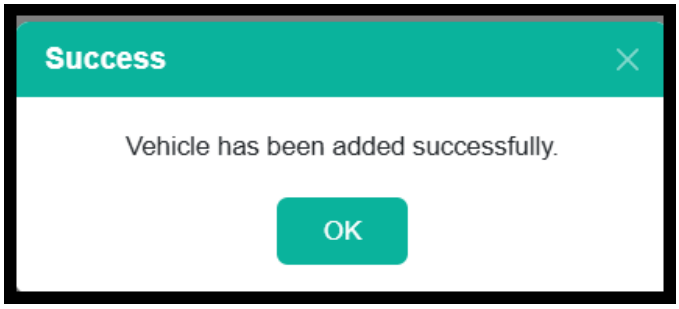

**Vehicle Type** — Registered Only. **No. of Vehicles** specifies how many vehicles are being added at once. Once all mandatory fields are filled, the **+ Add Vehicles** button becomes active. Clicking **Reset** clears all entered data and resets the form.

**Registered Vehicle:** when the Vehicle Type is set to Registered and the user clicks **+ Add Vehicles**, a vehicle entry table appears below with the following fields for each row:

**Vehicle No.** is a mandatory field for the vehicle registration number. The user clicks **Verify** to validate the vehicle number — the status initially shows **Pending** and updates once verified. After successful verification, the user fills in the **Fuel Type**, selects the **Ownership Type**, enters the **Tank Size**, and uploads the **RC Document**.

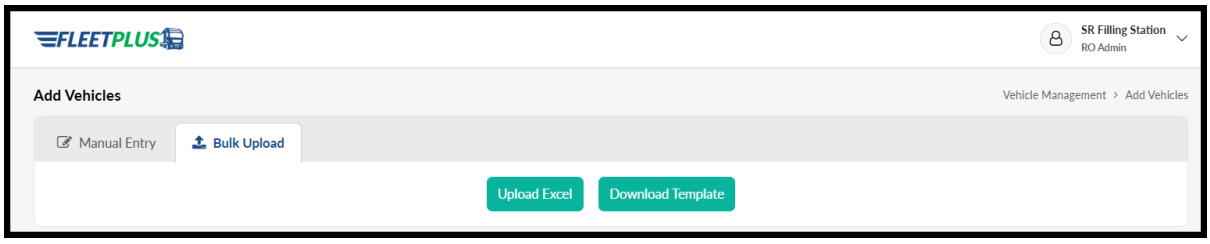

The delete icon at the end of each row removes that vehicle entry before submission. Once all details are filled and verified, the user clicks **Submit** to complete the registration. Registered vehicles are **directly added into the system** upon submission without requiring any approval.

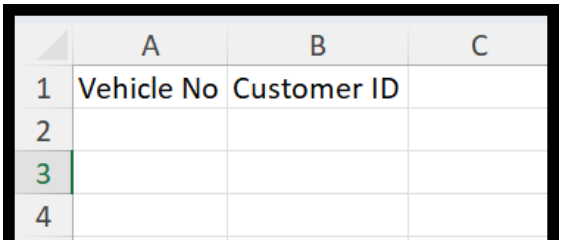

## 2.3.2 Vehicle Bulk Upload

The Vehicle Bulk Upload section allows users to register multiple vehicles at once by uploading a pre-filled Excel file, eliminating the need to add each vehicle individually.

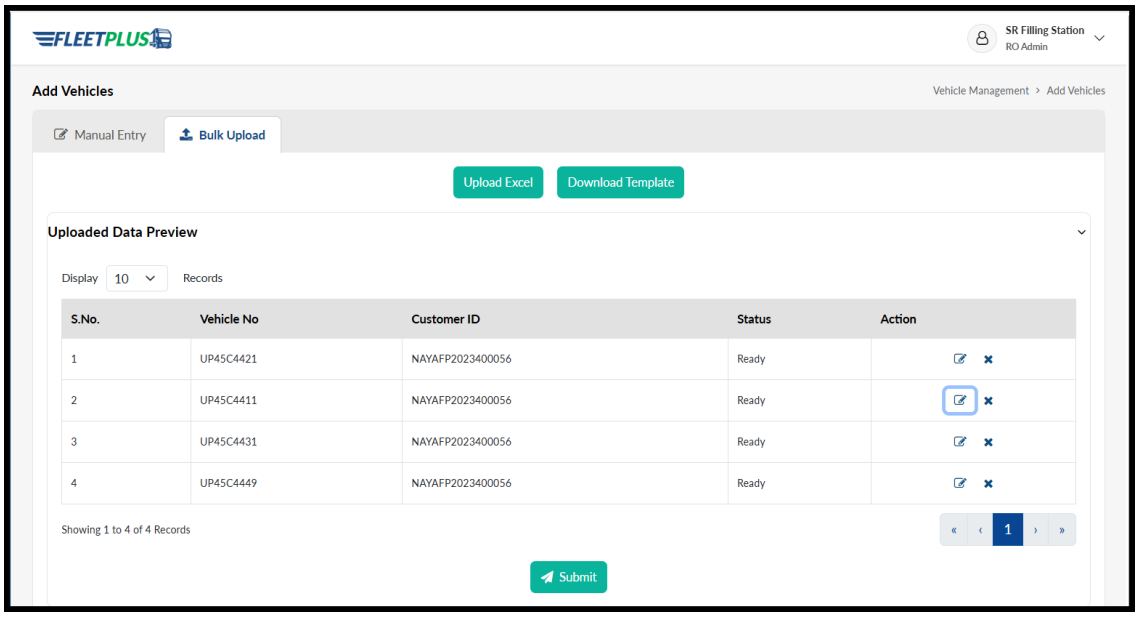

**Navigation Path:** Vehicle Management → Vehicle Bulk Upload

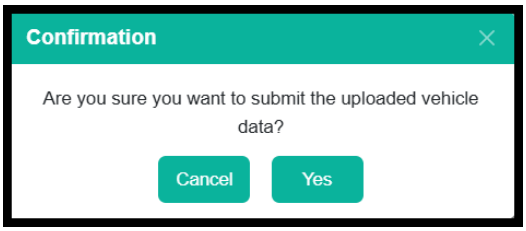

When the page loads, two buttons are available — **Download Template** and **Upload Excel**. The user first clicks **Download Template** to download the prescribed Excel template, fills it with the required vehicle details, saves it, and then clicks **Upload Excel** to upload the filled file.

**Uploaded Data Preview:** after a successful upload, a preview section appears displaying all vehicle records from the uploaded file in a table with **S.No.**, **Vehicle No.**, **Customer ID**, **Status**, and **Action** columns. The status of each record is shown as **Ready** once valid and prepared for submission. The **edit icon (✎)** modifies a record inline; the **delete icon (✕)** removes an unwanted record.

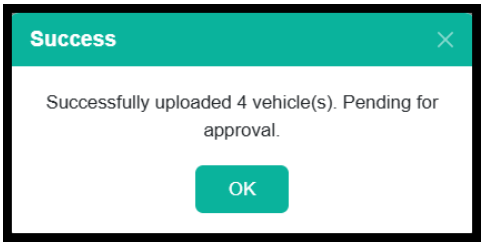

**Submitting the Upload File:** once the preview is reviewed and confirmed, the user clicks **Submit**. A confirmation pop-up asks the user to confirm the submission.

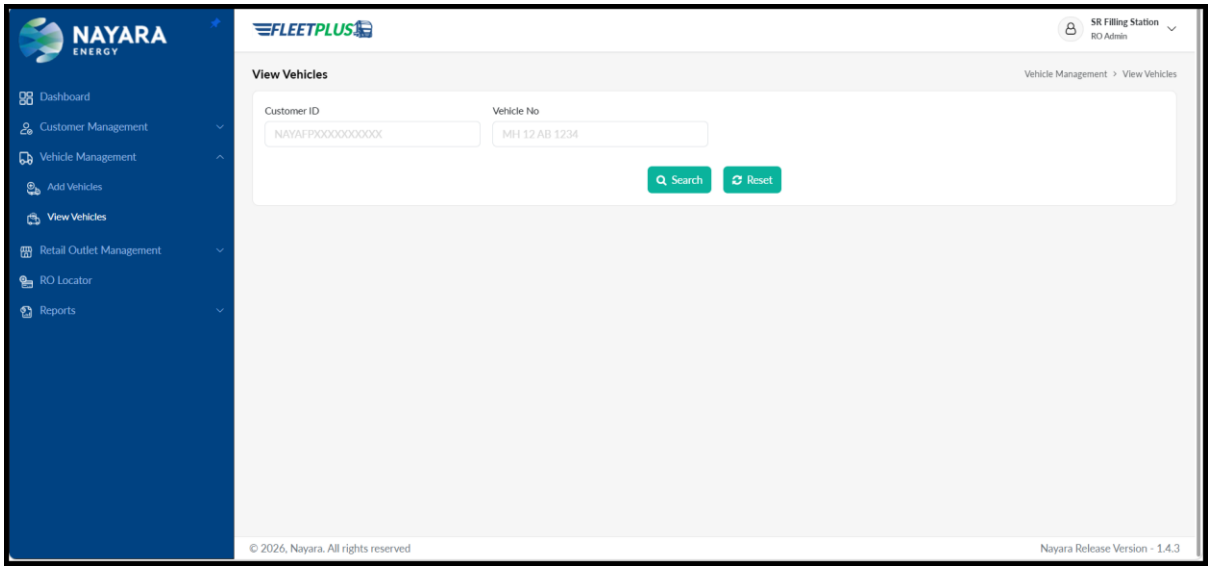

Clicking **Yes** proceeds with the submission, and a Success pop-up confirms the vehicles have been uploaded and are pending approval. Clicking **Cancel** or ✕ dismisses the confirmation without submitting.

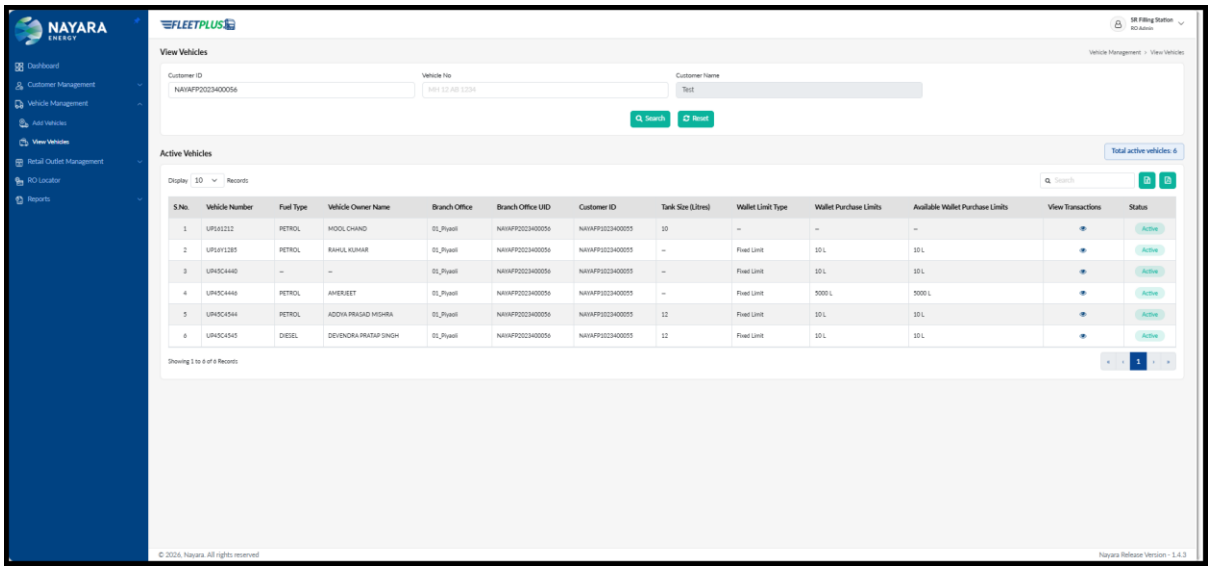

**Note:** bulk-uploaded vehicles are sent for approval after submission and are added to the system only once approved by the authorized user.

## 2.4 View Vehicle

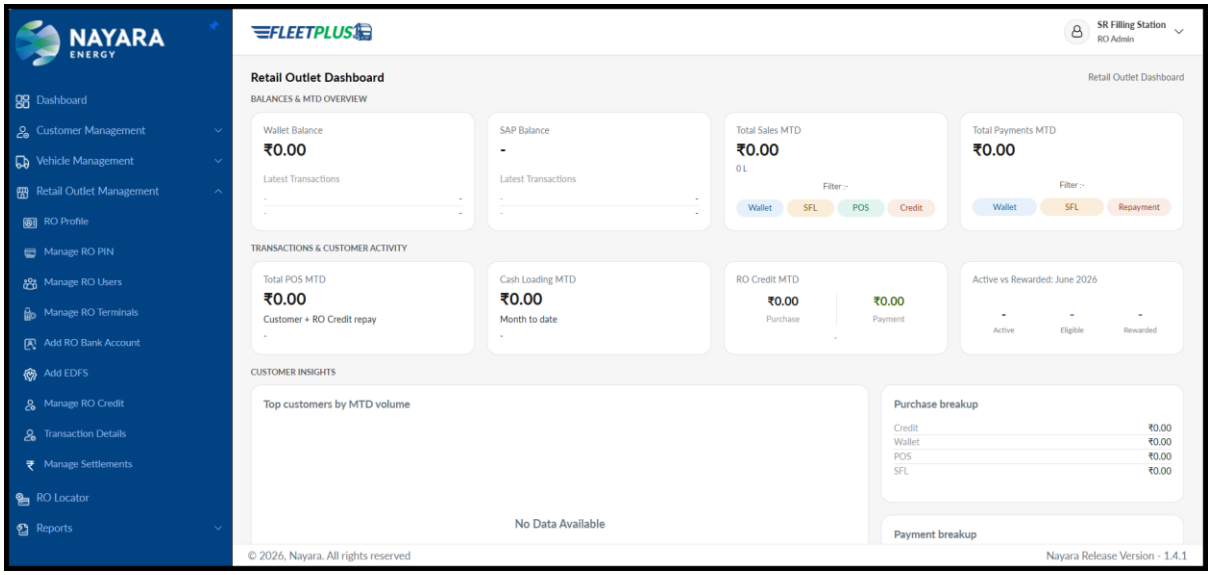

Enter the Customer ID and/or Vehicle Number to search.

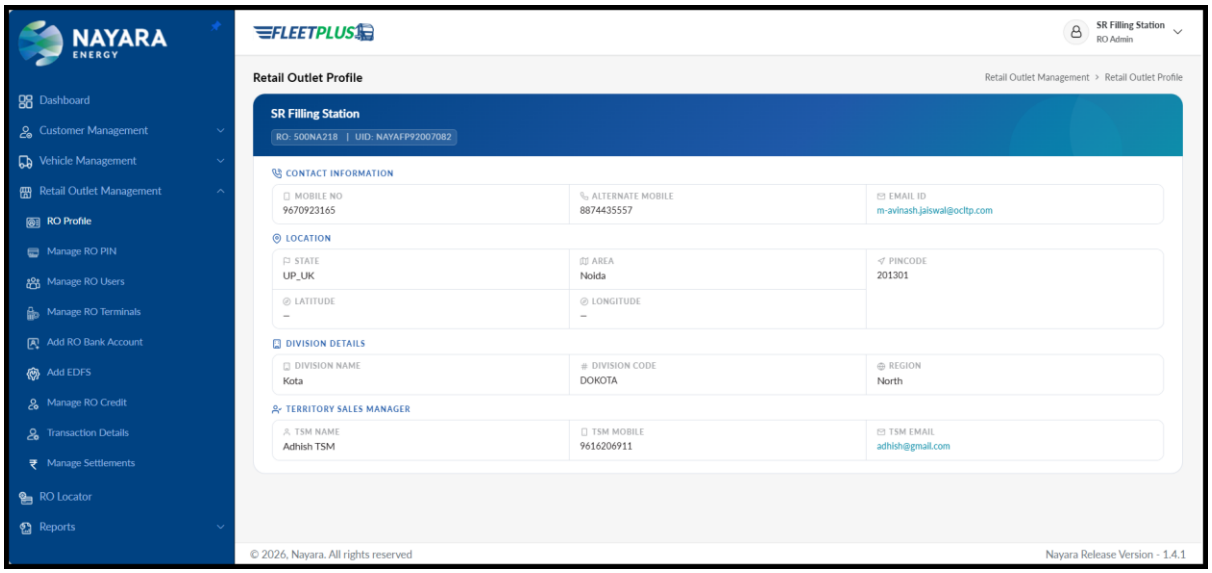

Clicking the eye icon under the View Transactions option lets the user view the transactions related to that specific vehicle. The remaining fields on this screen are defined as shown.

# 3. Retail Outlet Management

## 3.1 RO Profile

This is read-only data showing the retail outlet's registered profile information.

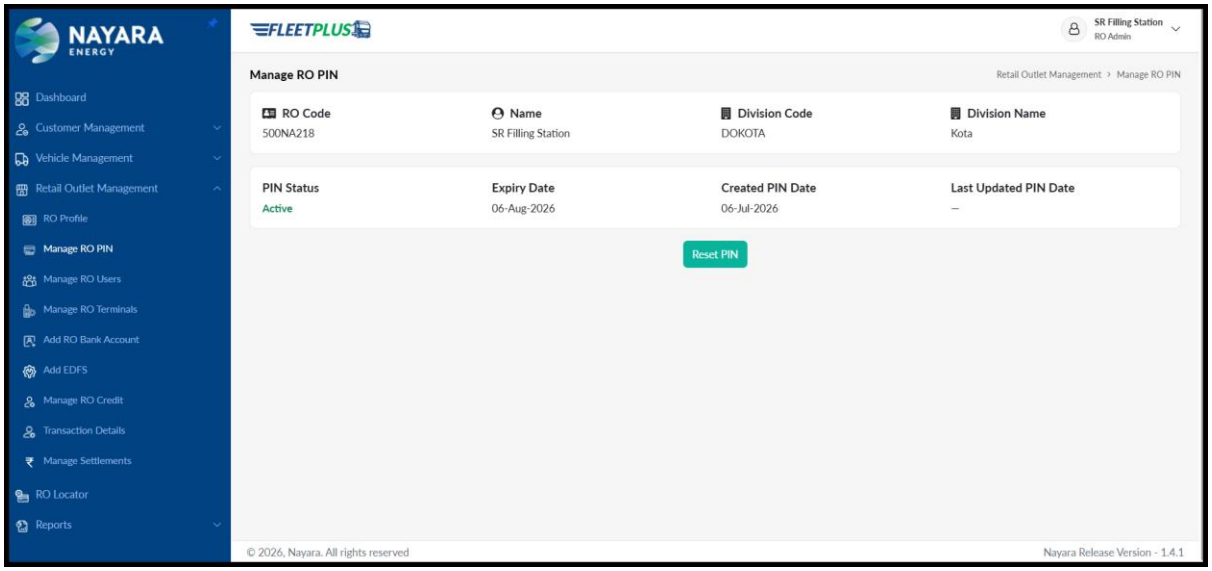

## 3.2 Manage RO PIN

The Manage RO PIN section allows authorized users to view and manage the PIN configured for a retail outlet. Users can view the masked PIN details, monitor its validity period, and reset the PIN whenever required.

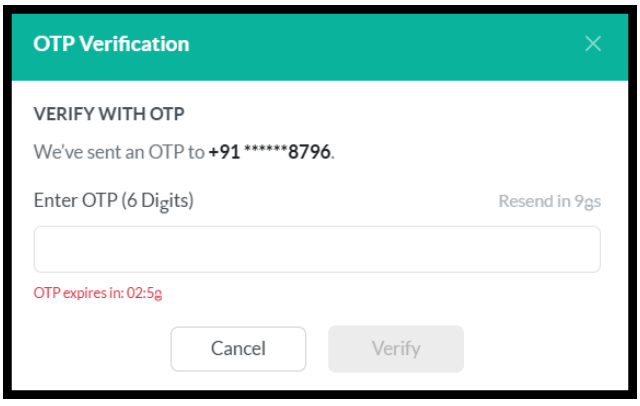

**Navigation Path:** Retail Outlet Management → Manage RO PIN

**Viewing the PIN:** the **View** button beside the masked PIN allows authorized users to view the complete PIN value. Access is restricted to users with the required permissions.

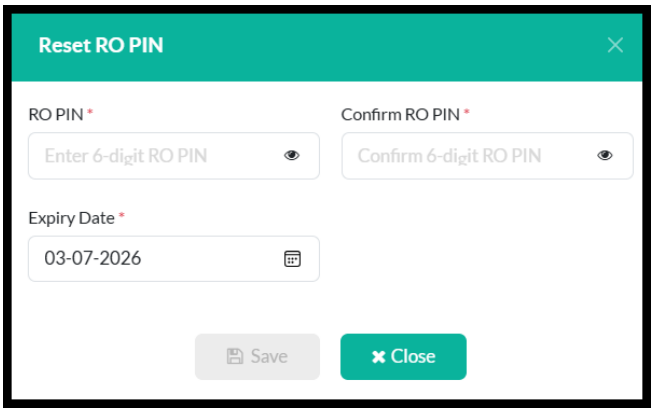

**Resetting the PIN:** clicking **Reset PIN** initiates the reset process. As part of the security verification:

8. An **OTP (One-Time Password)** is sent to the retail outlet's registered mobile number.
9. The user must enter and verify the OTP successfully.

Upon successful verification, the PIN reset form is displayed.

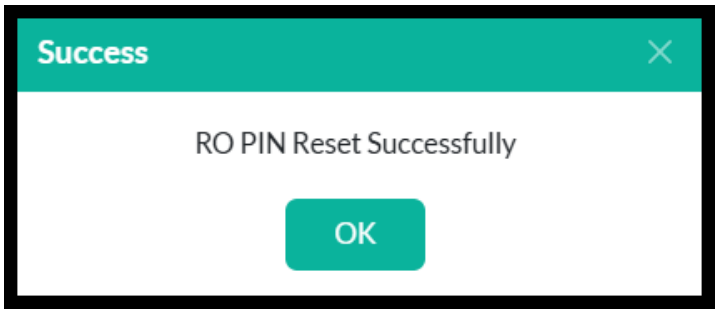

The user must provide the following details:

- **New PIN** — enter the new PIN.
- **Confirm PIN** — re-enter the PIN for confirmation.
- **Expiry Date** — select the validity date for the new PIN.

The system validates that the New PIN and Confirm PIN values match before allowing submission.

**Saving the New PIN:** after entering the required details, click **Save** to update the PIN.

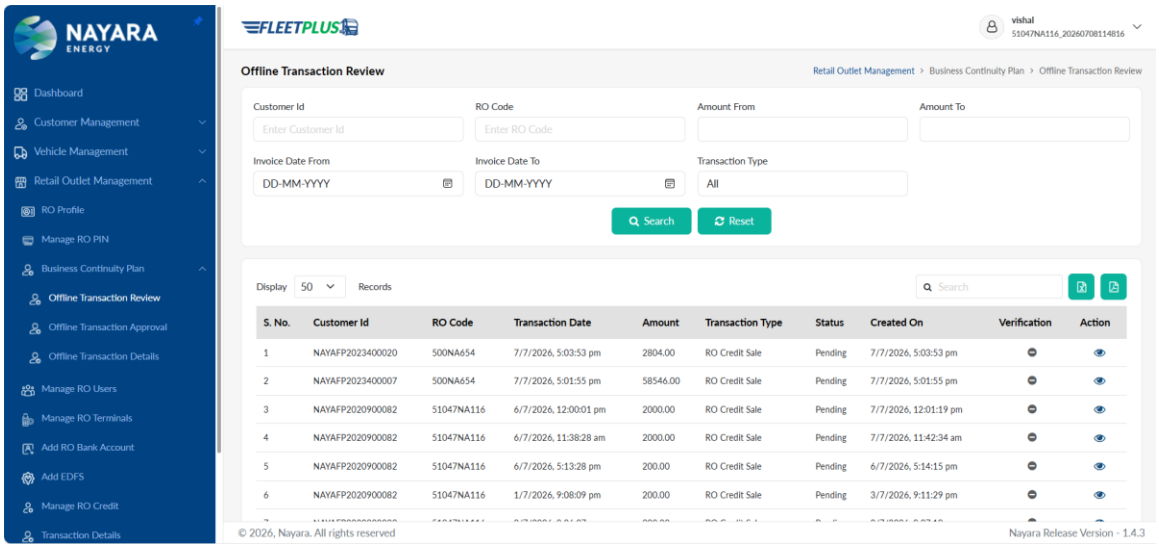

## 3.3 Business Continuity Plan

### 3.3.1 Offline Transaction Review

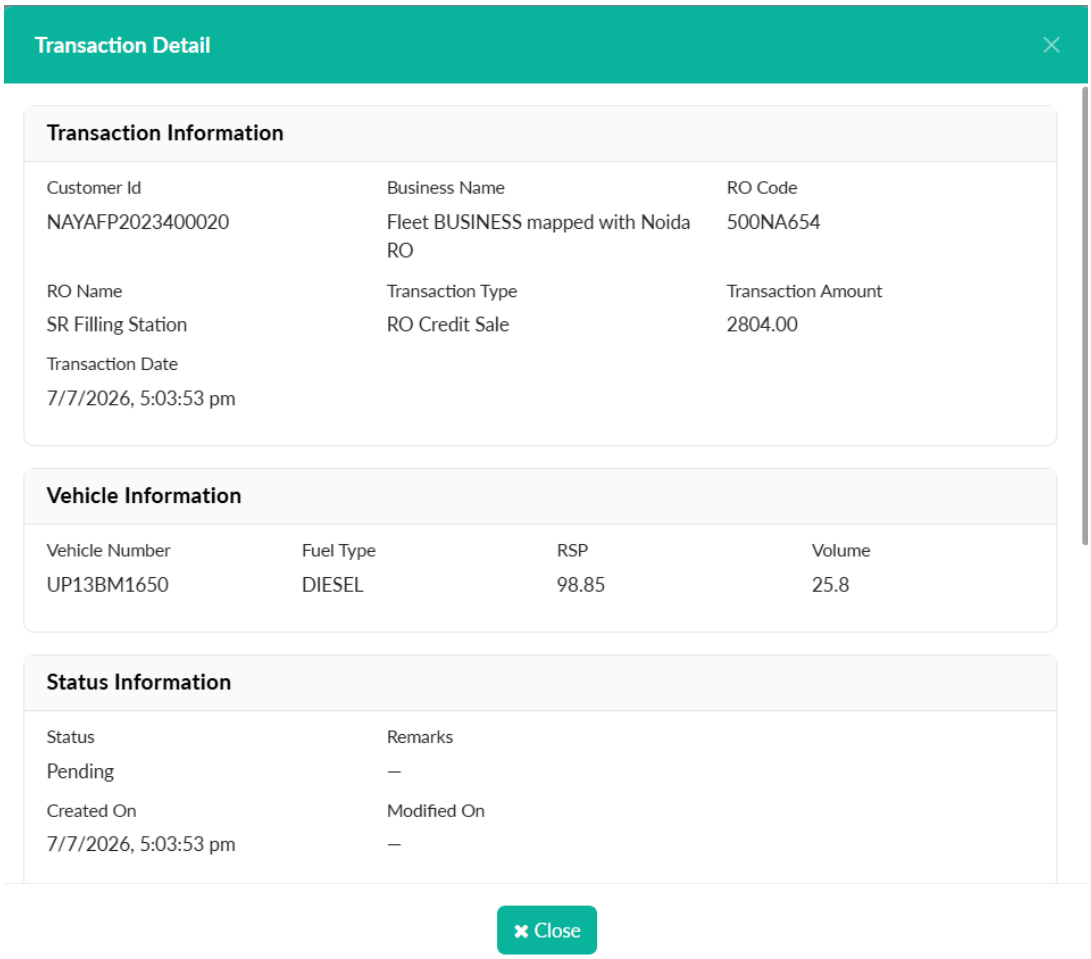

The Offline Transaction Review screen is used by authorized users to review offline transaction requests submitted in the system before they are forwarded for approval. Users can search for transactions, verify all transaction information, review supporting details, and submit the record for the next level of authorization.

The page provides filters to search offline transactions using the available search criteria. After locating the required record, users can click the Eye (View) icon from the Action column to review the complete transaction details.

**Viewing Transaction Details**

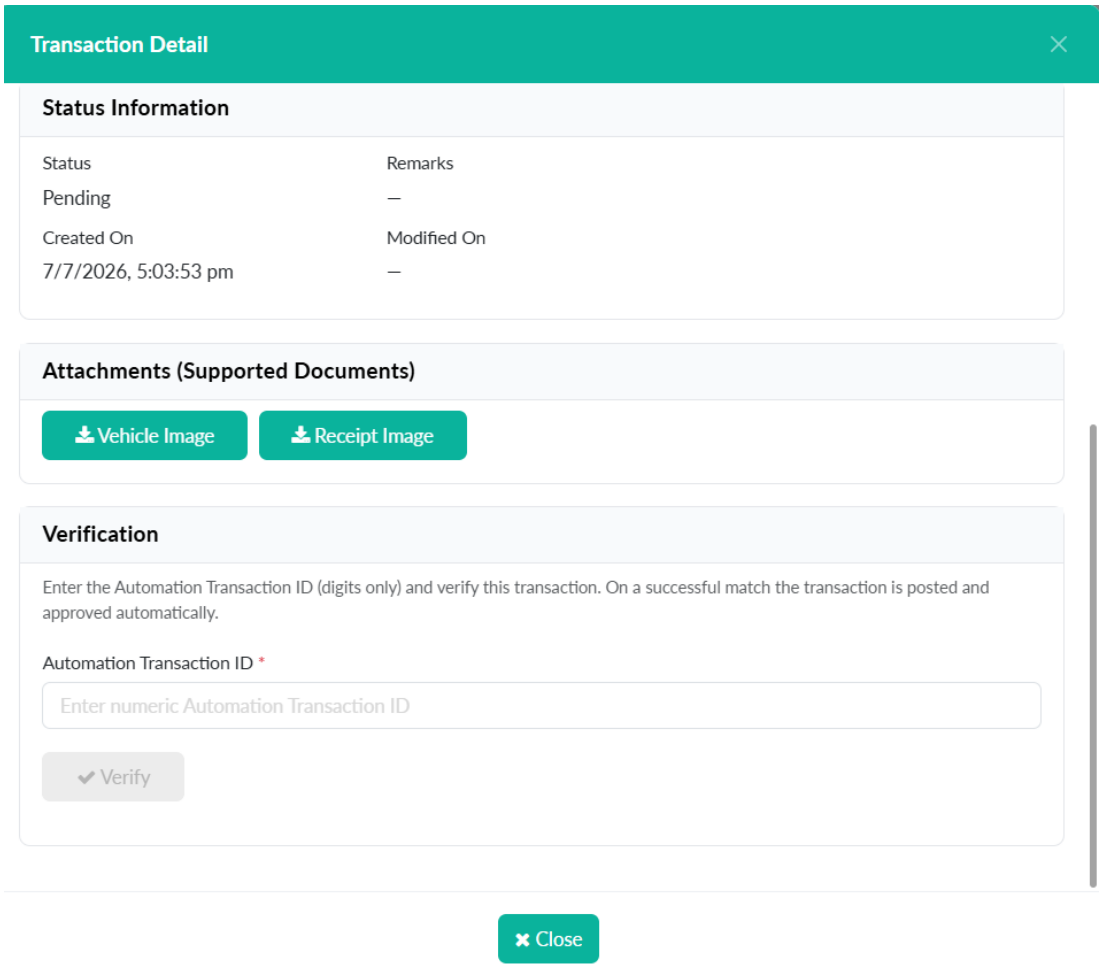

Clicking the Eye icon opens the complete transaction details.

The transaction review screen displays all information submitted for the offline transaction, including customer information, transaction information, payment details, and supporting records.

As the user scrolls further down the page, additional sections become available for verification, including all mandatory details required before forwarding the transaction for approval.

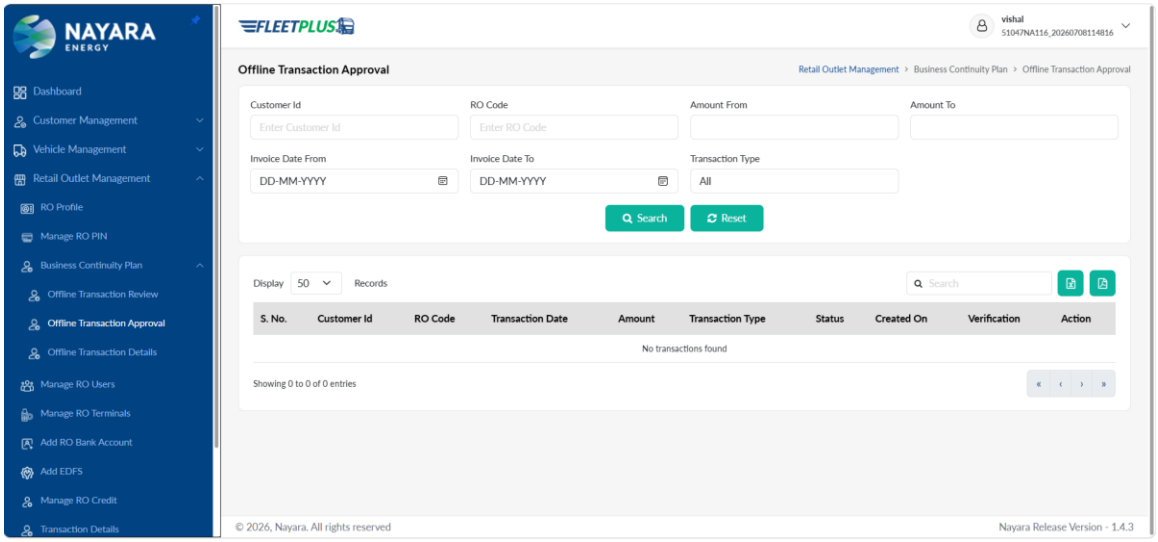

After verifying all the information, the reviewer can submit the transaction for approval.

## 3.3.2 Offline Transaction Approval

The Offline Transaction Approval screen is used by authorized approvers to perform the final verification of offline transaction requests that have already been reviewed.

The approver verifies all transaction information, validates the submitted details, and either approves or rejects the request based on the verification.

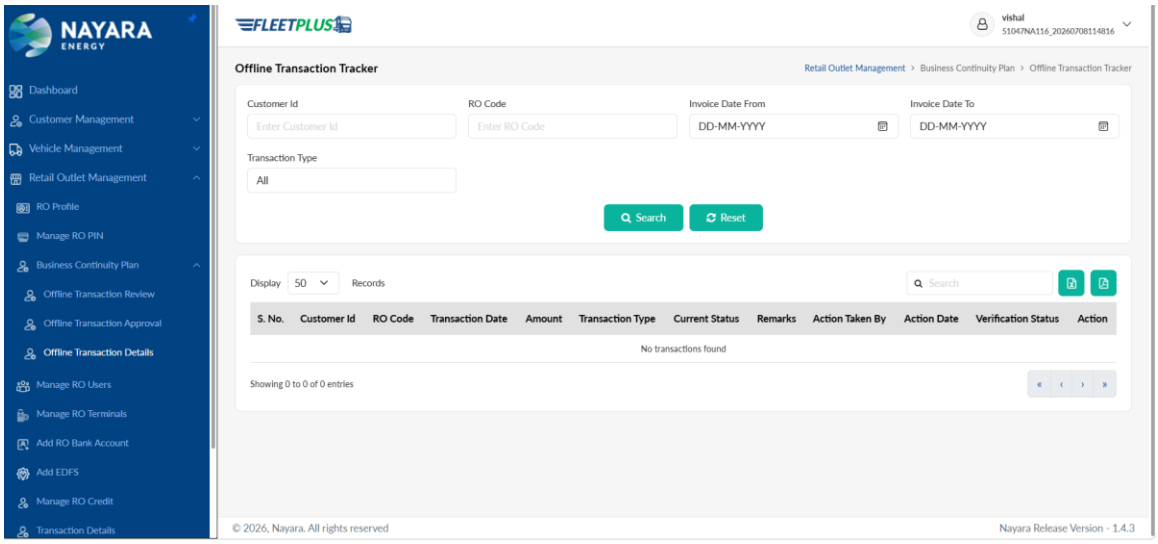

After successful verification, the approved transaction is processed by the system and the updated transaction status is reflected accordingly.

### 3.3.3 Offline Transaction Details

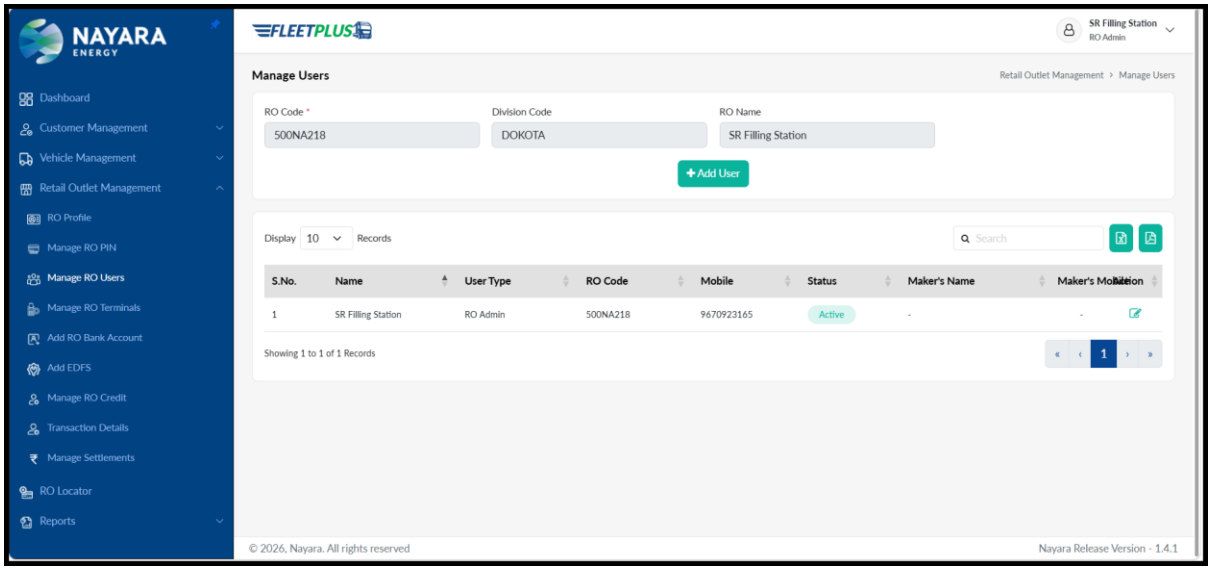

The Offline Transaction Details screen displays the complete history of offline transactions after the review and approval process has been completed.

Once both the Review and Approval stages are successfully completed, all processed offline transaction records become available on this screen.

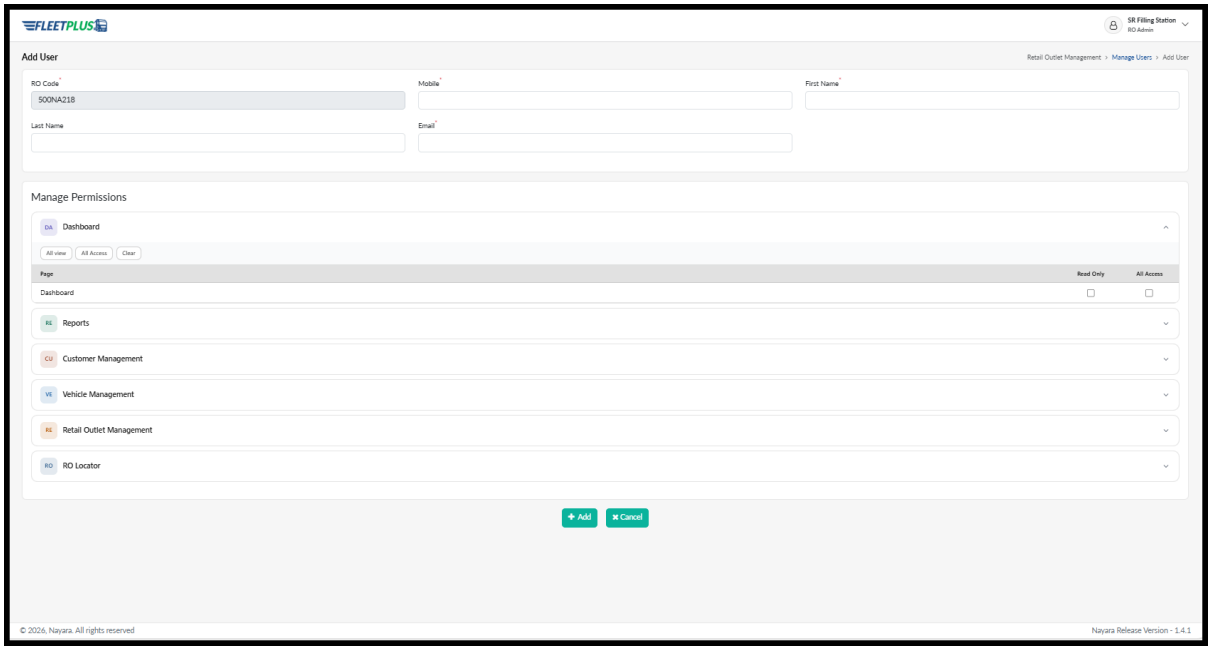

Users can search and view transaction details, monitor transaction status, and refer to the complete transaction history whenever required.

## 3.4 Manage RO Users

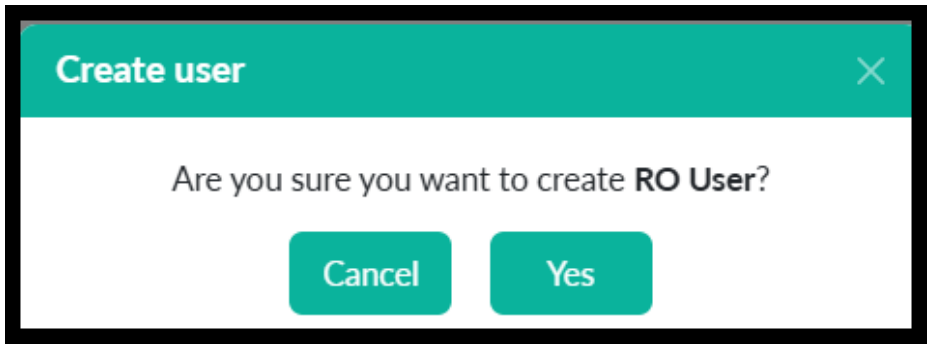

Users can download the records in the form of Excel or PDF.

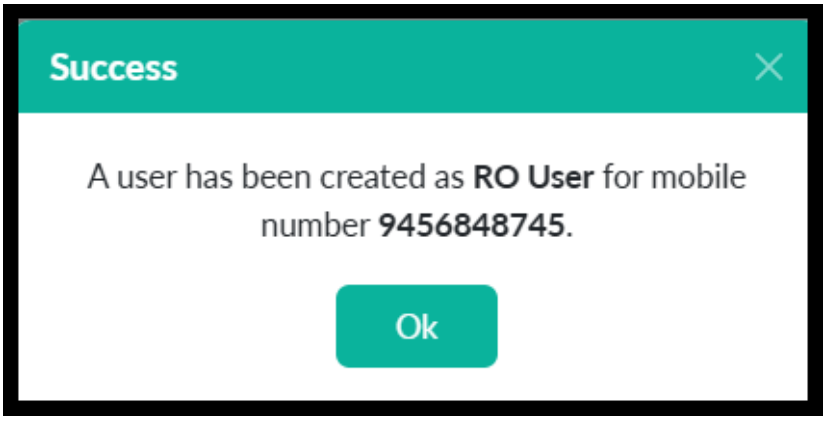

Clicking **Add User** opens the following page:

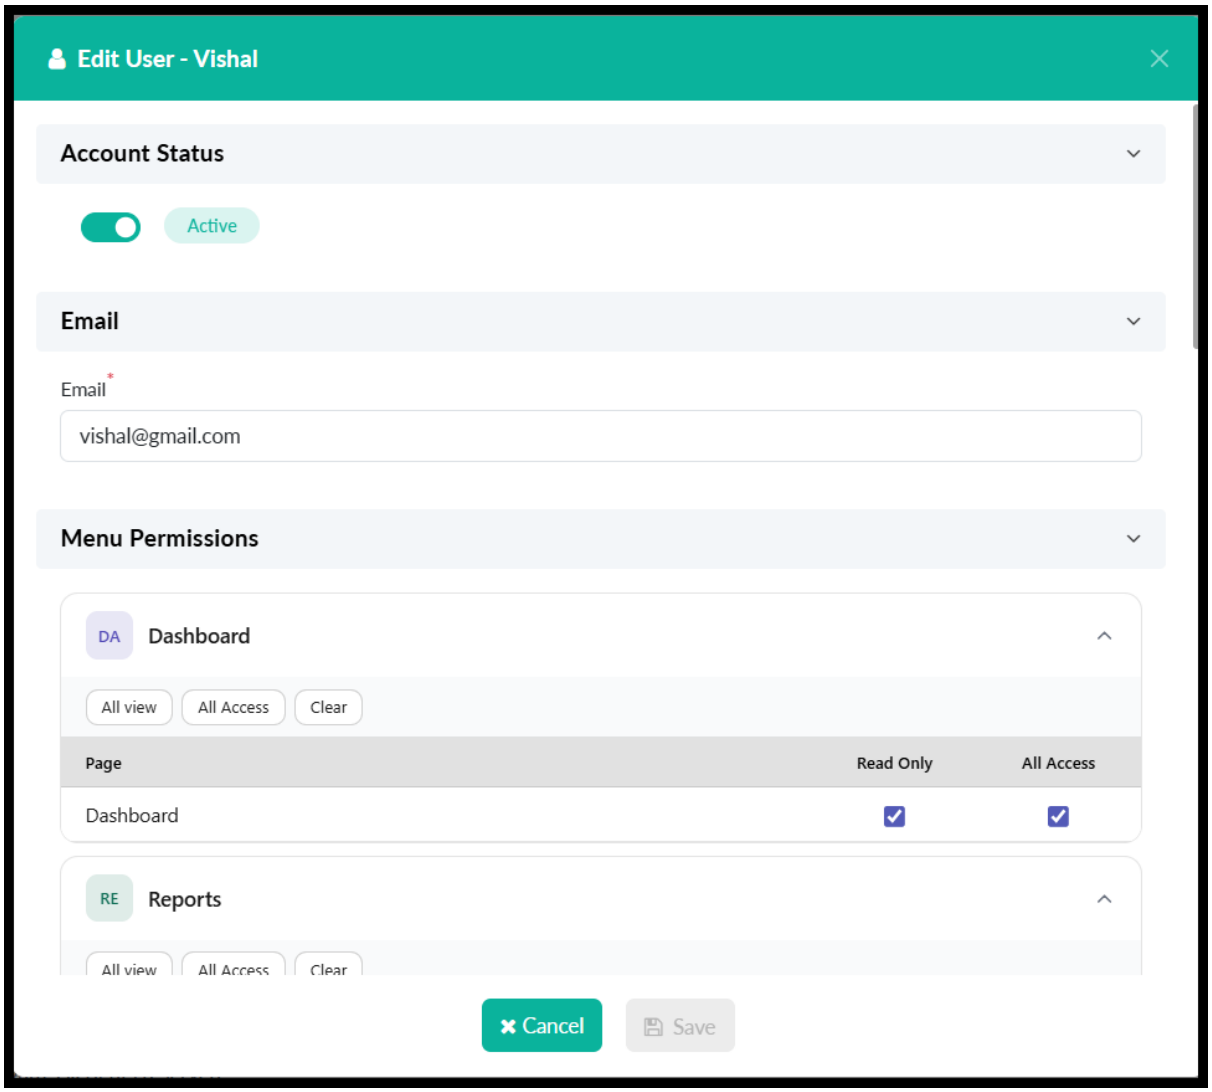

Fill the data, assign the permissions, and click the **Add** icon.

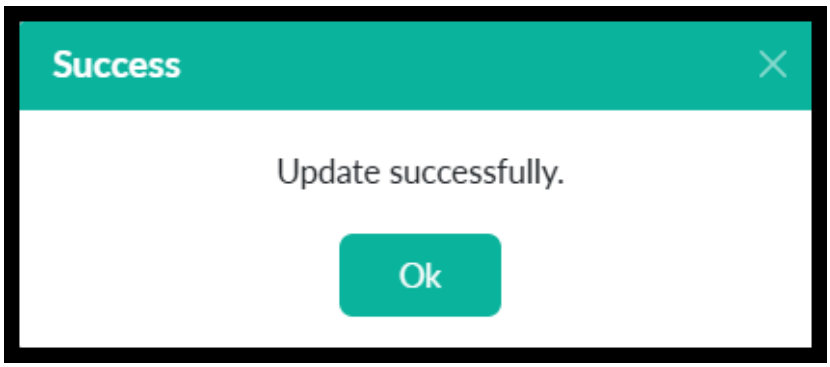

The user will be created:

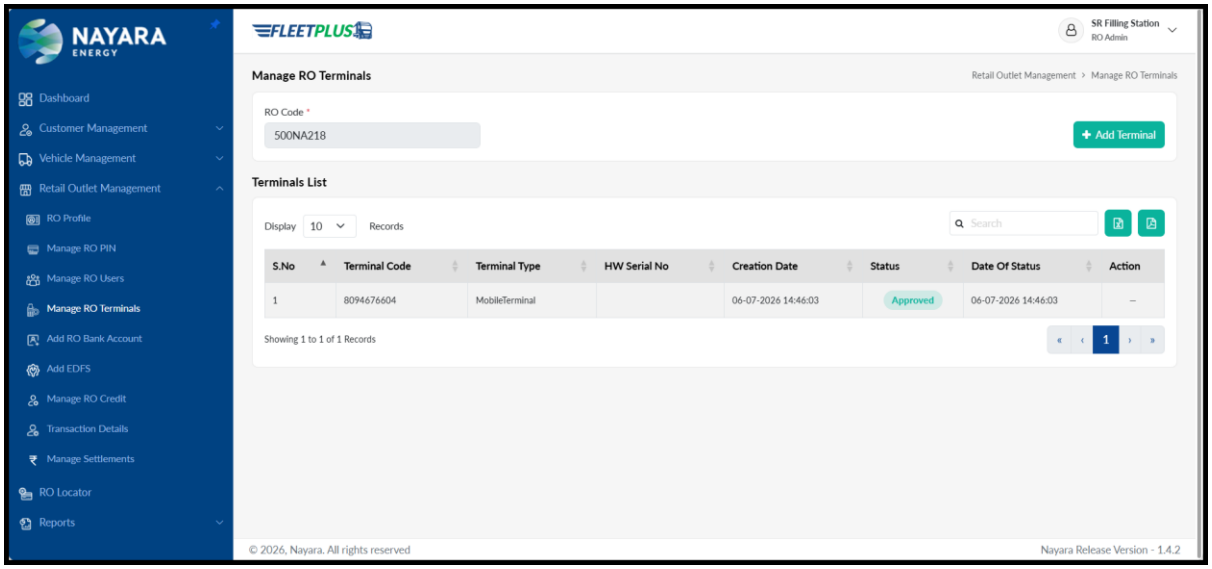

Clicking the **Edit** icon from the Action section of the records lets the user activate/deactivate the account status, change the email address, and edit the menu permissions.

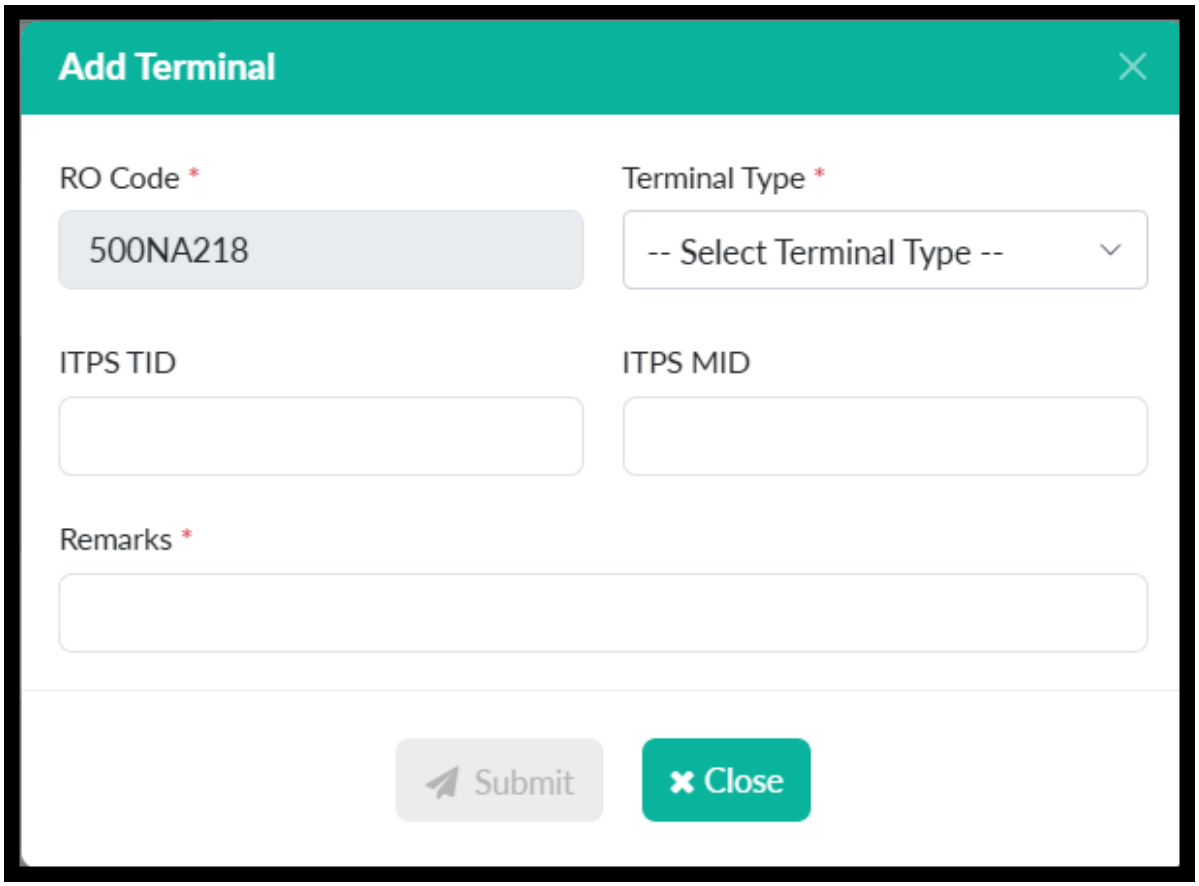

Click **Save** after making the changes.

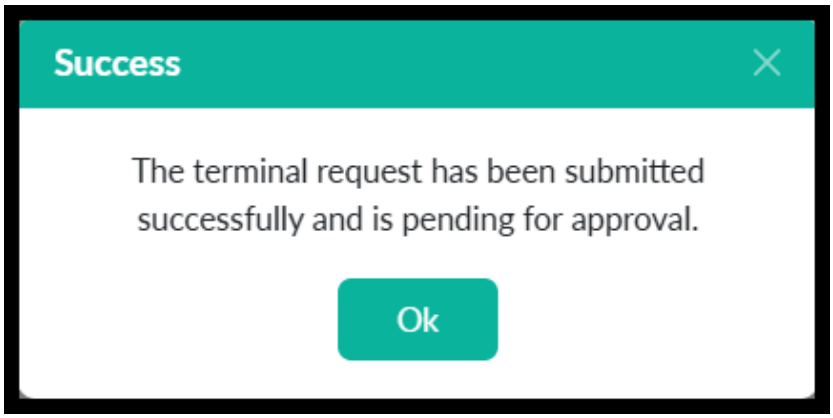

## 3.5 Manage RO Terminals

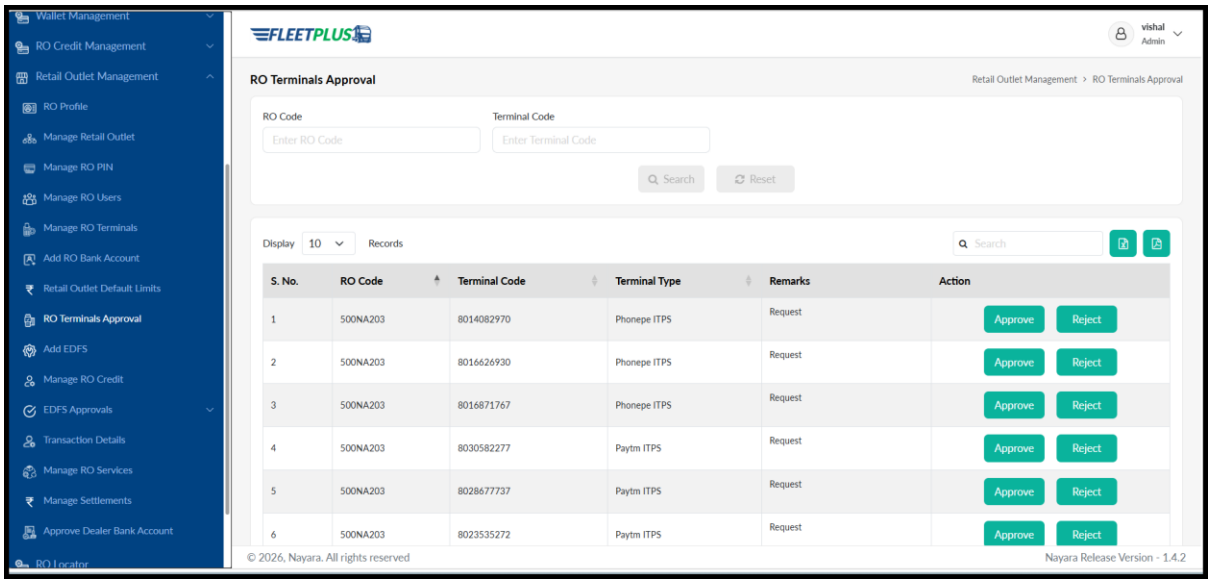

Clicking **Add Terminal** opens the page below, where the user fills in the terminal details.

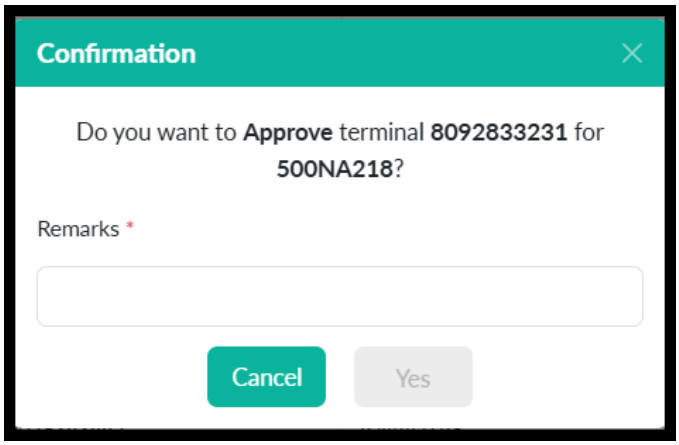

Clicking **Submit** sends the terminal for approval to the authorized user.

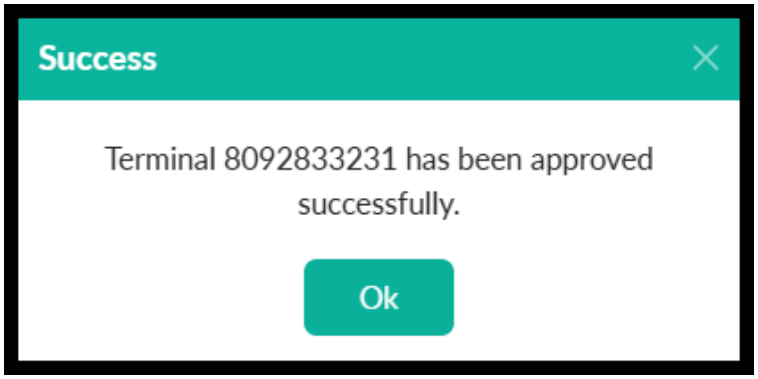

**Approval of RO Terminal** — this goes to the authorized user for approval **(this section is for reference only)**.

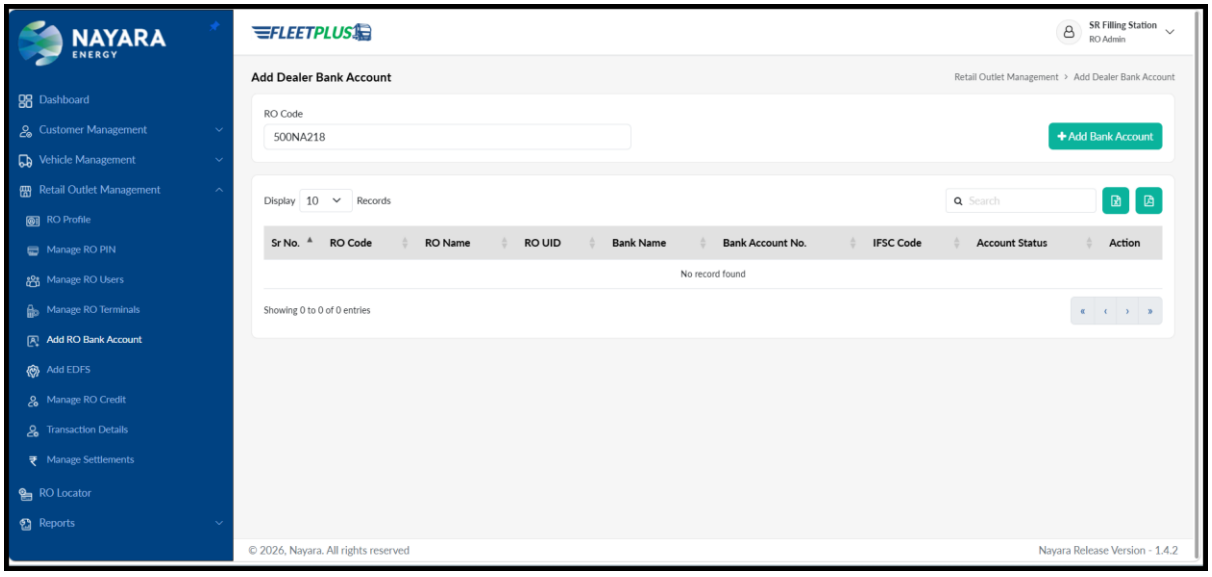

Click **Approve**, then give the remarks.

It will be approved and added successfully.

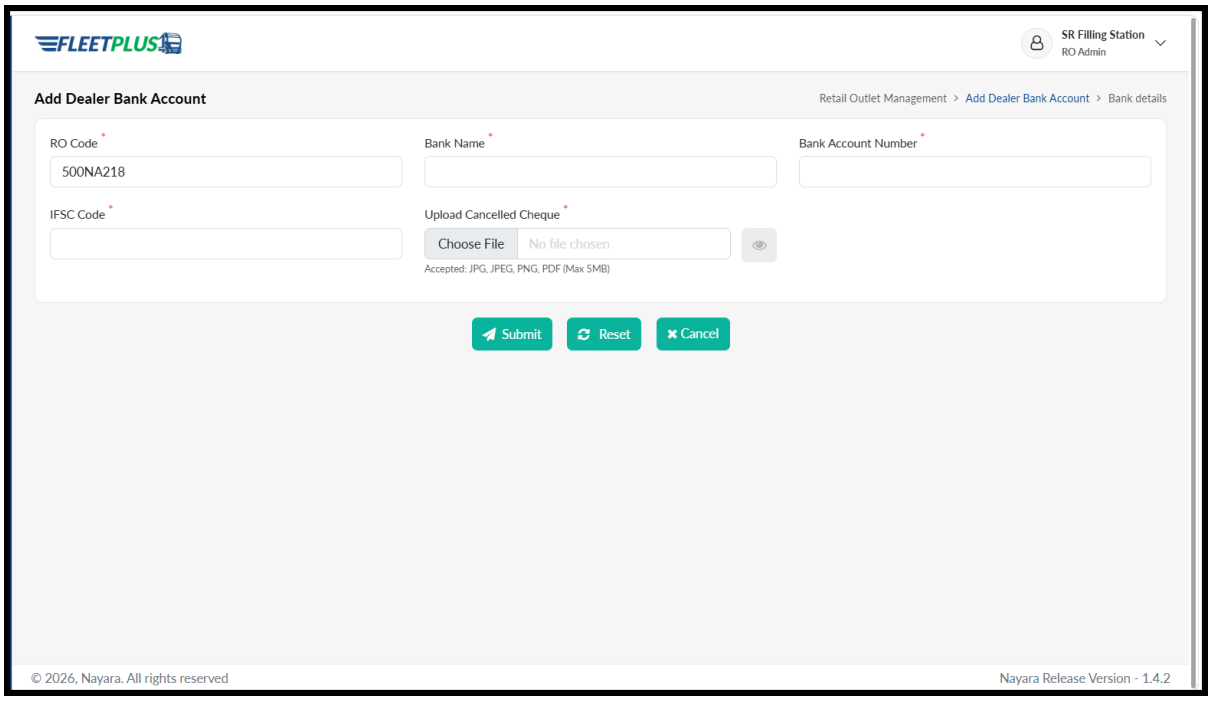

## 3.6 Add RO Bank Account

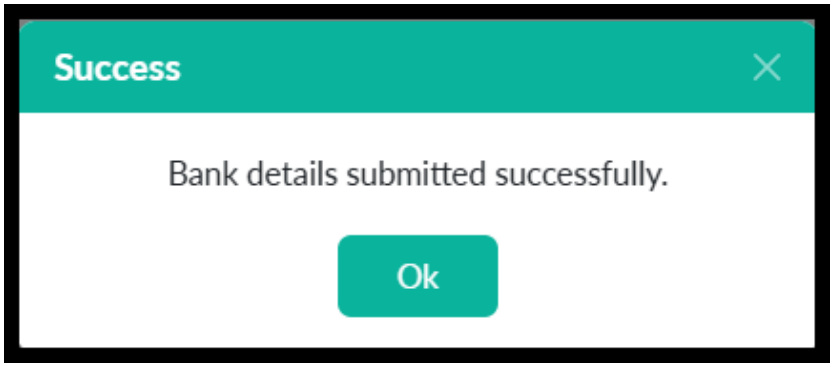

As with the other record sections, the user can download the records in both Excel and PDF form.

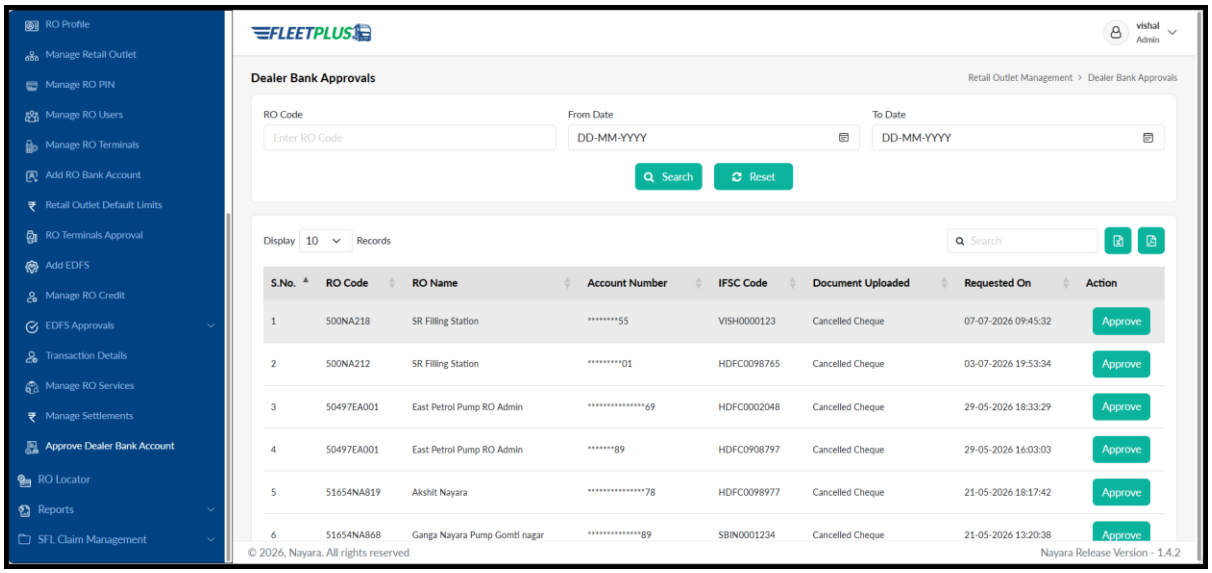

Clicking **Add Bank Account** opens the following page:

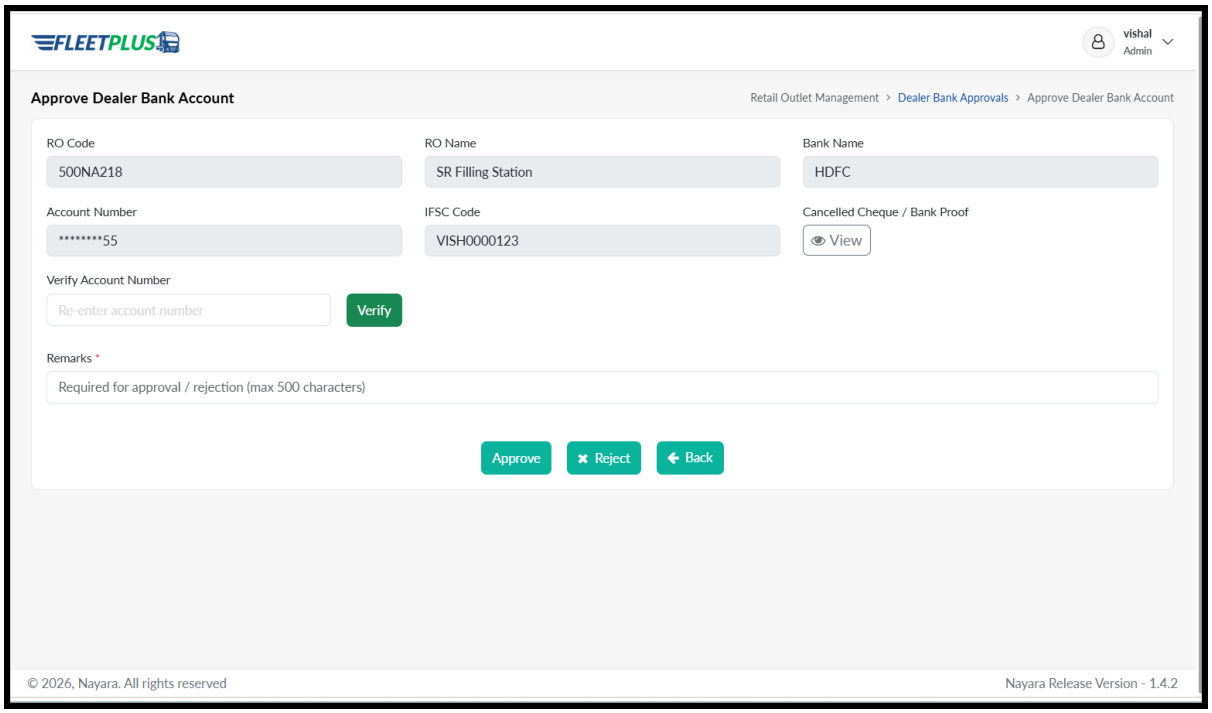

Fill in the data and click **Submit** — the details will be submitted successfully.

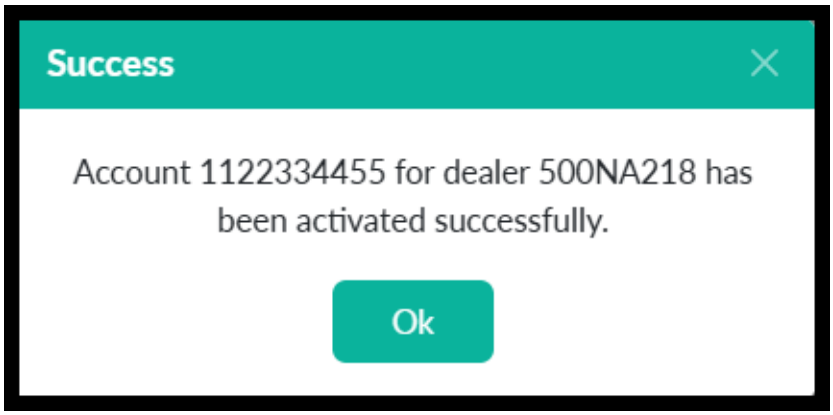

The authorized user can then approve this account **(this section is for reference only)**.

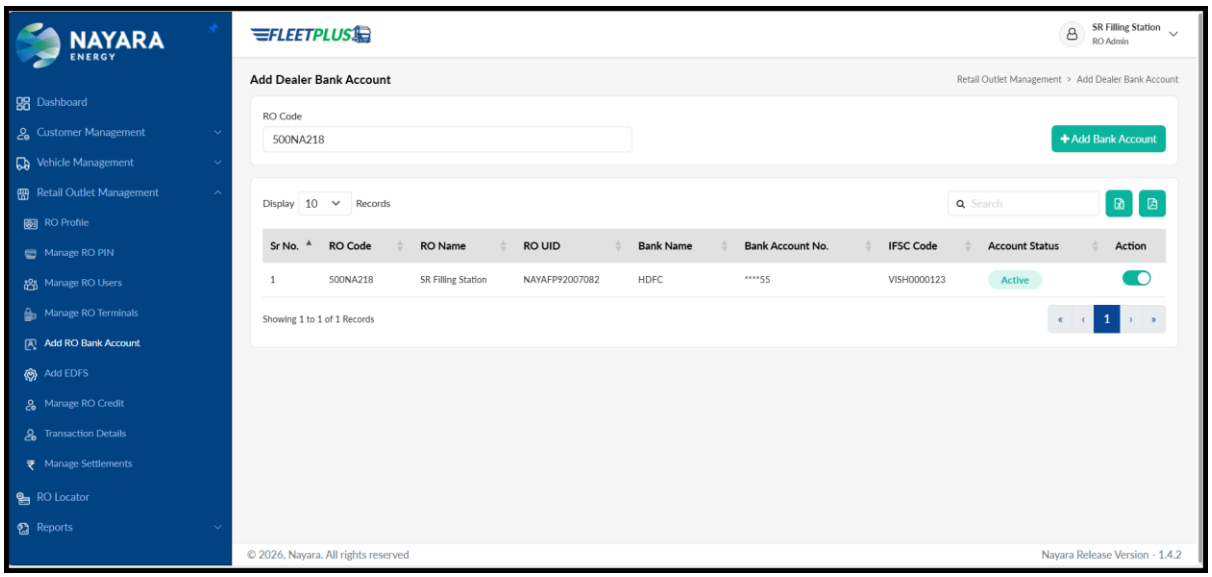

Clicking **Approve** opens a new page.

Verify the account number by manually entering the same, click **Verify**; if it matches, add the remark and click **Approve** to approve it.

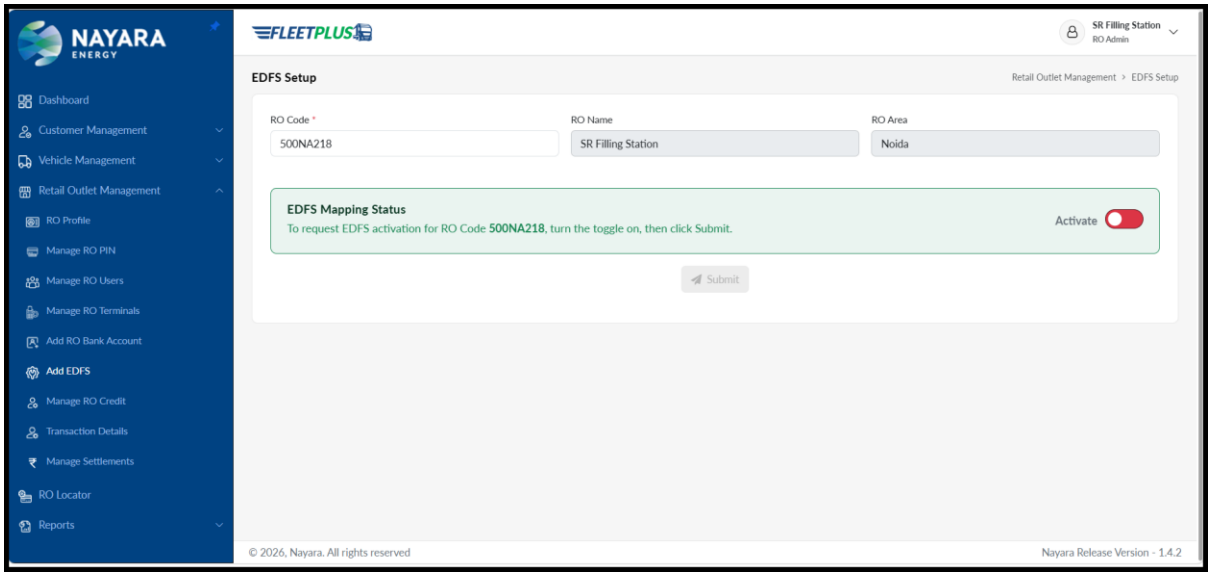

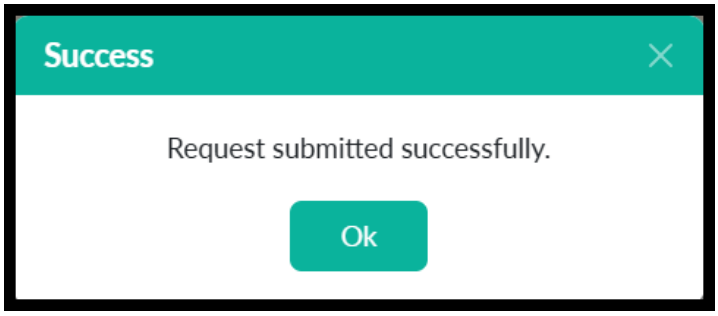

Once approved, it will look like this:

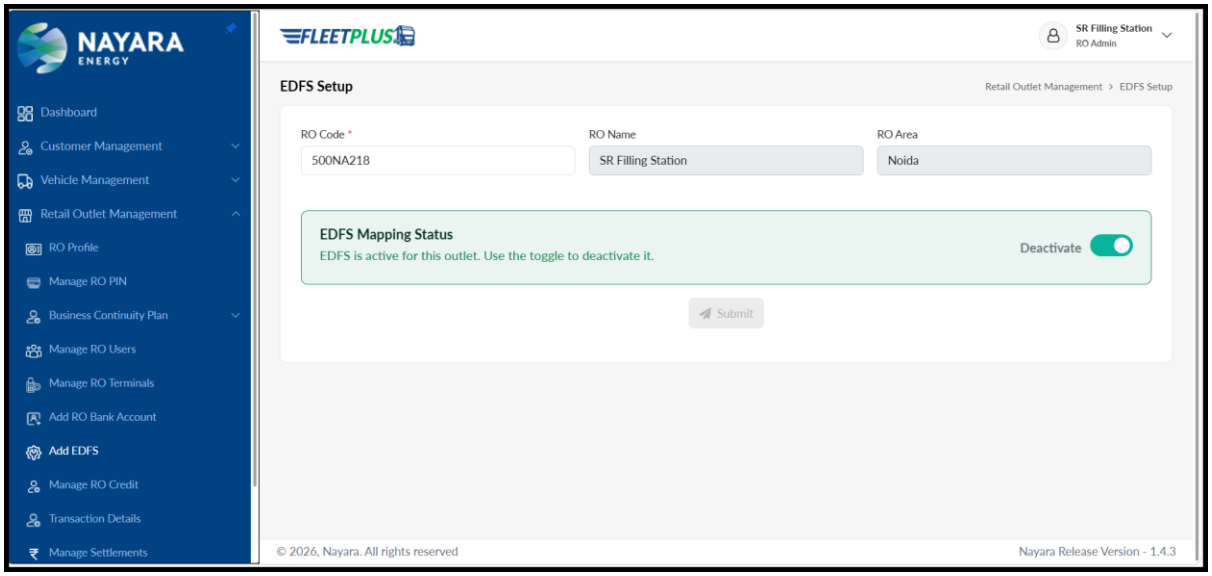

From here, the user can activate or deactivate the account using the toggle switch under the Action section, and can download the records in the form of Excel or PDF.

## 3.7 Add EDFS

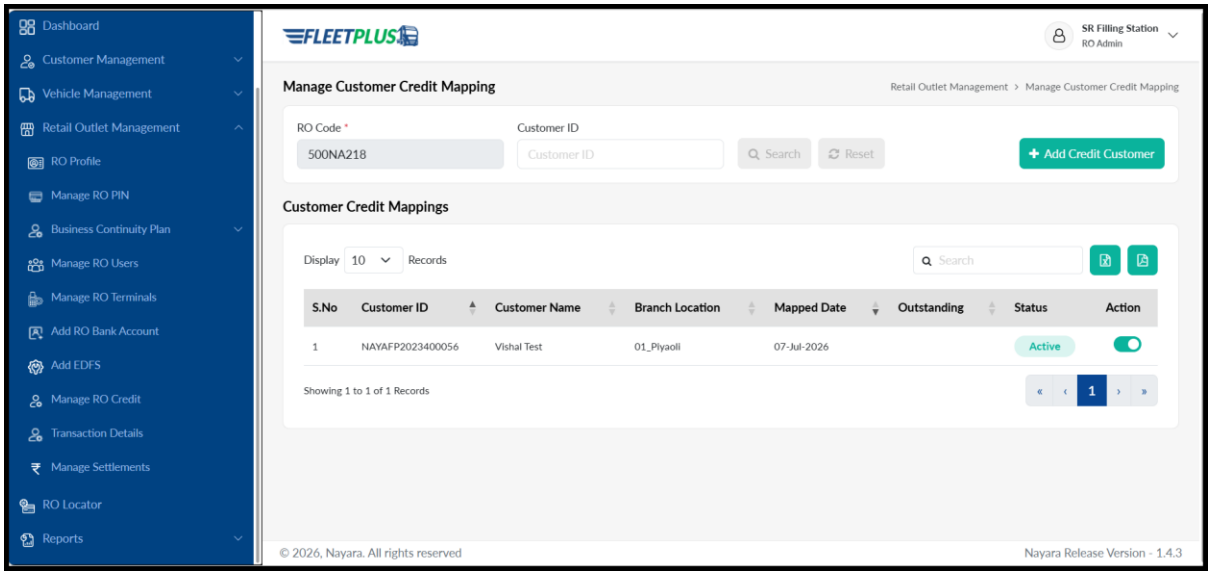

It goes for approval to the authorized user. Once approved, the EDFS account is enabled.

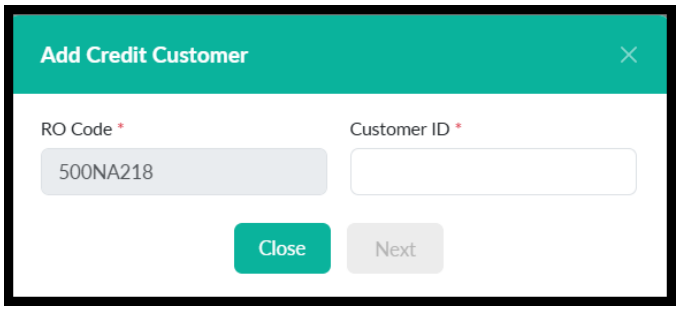

## 3.8 Manage RO Credit

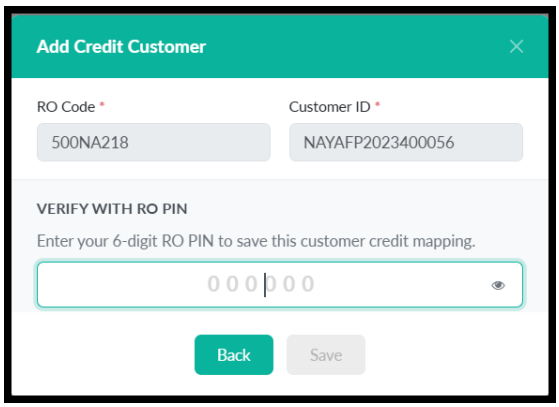

The user can download the records in both formats. From the Action section, the user can activate or deactivate a specific customer ID.

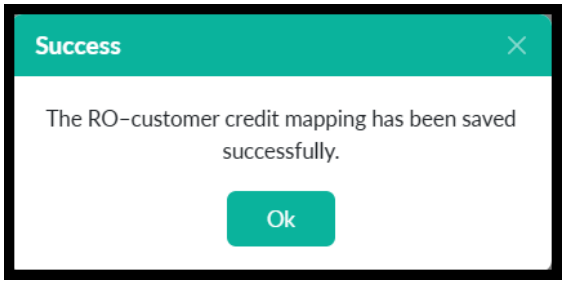

Click **Add Credit Customer**:

Fill in the Customer ID:

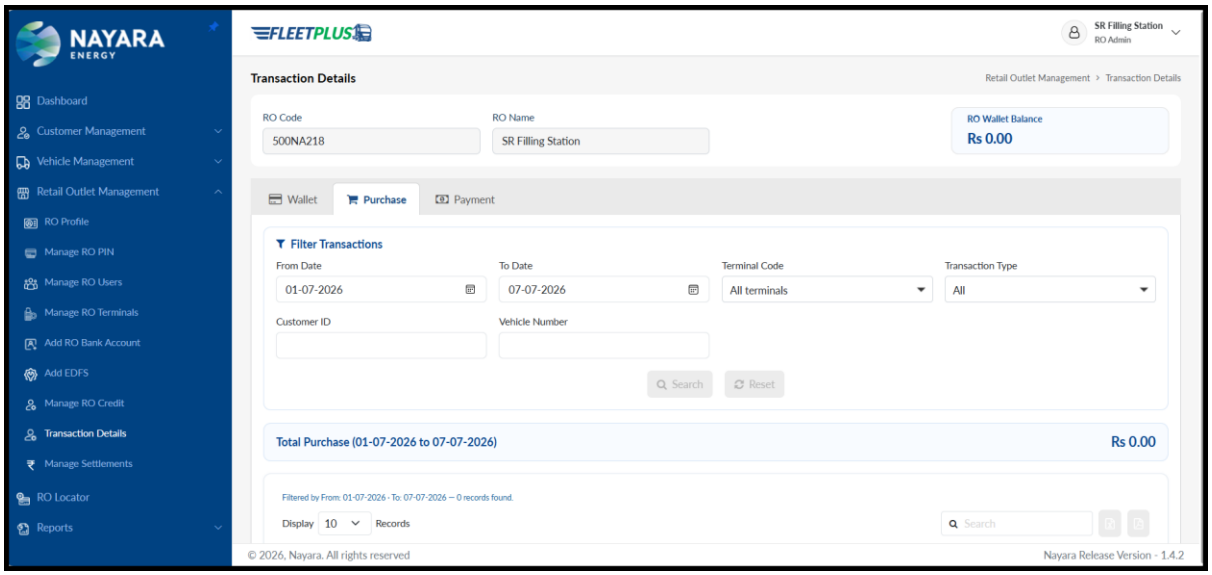

Enter the 6-digit RO PIN for mapping this customer.

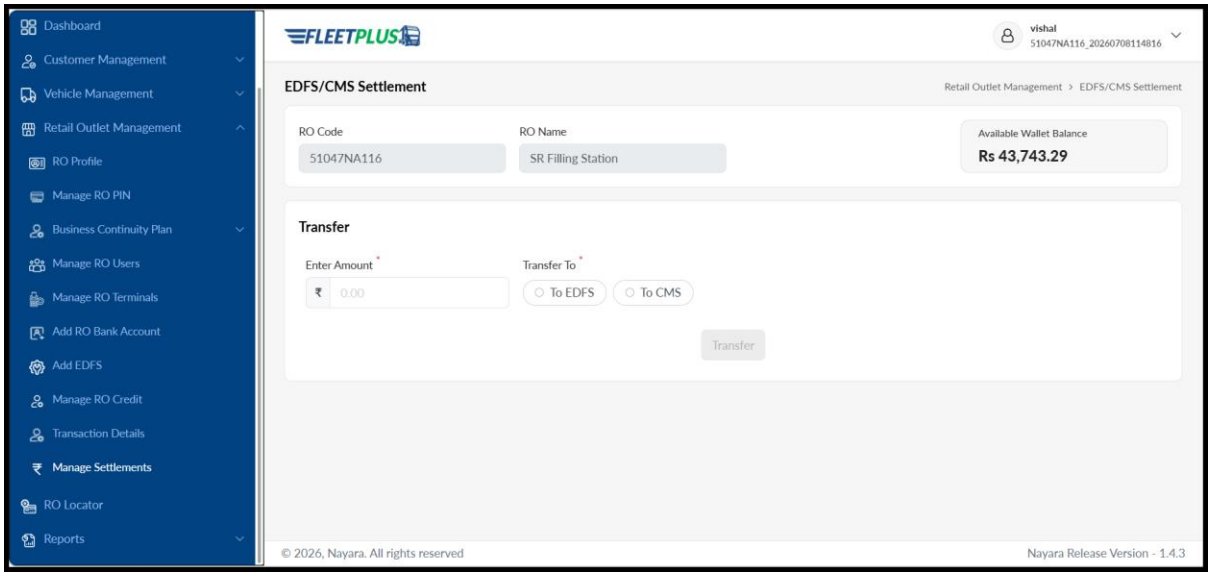

The customer will then be mapped.

## 3.9 Transaction Details

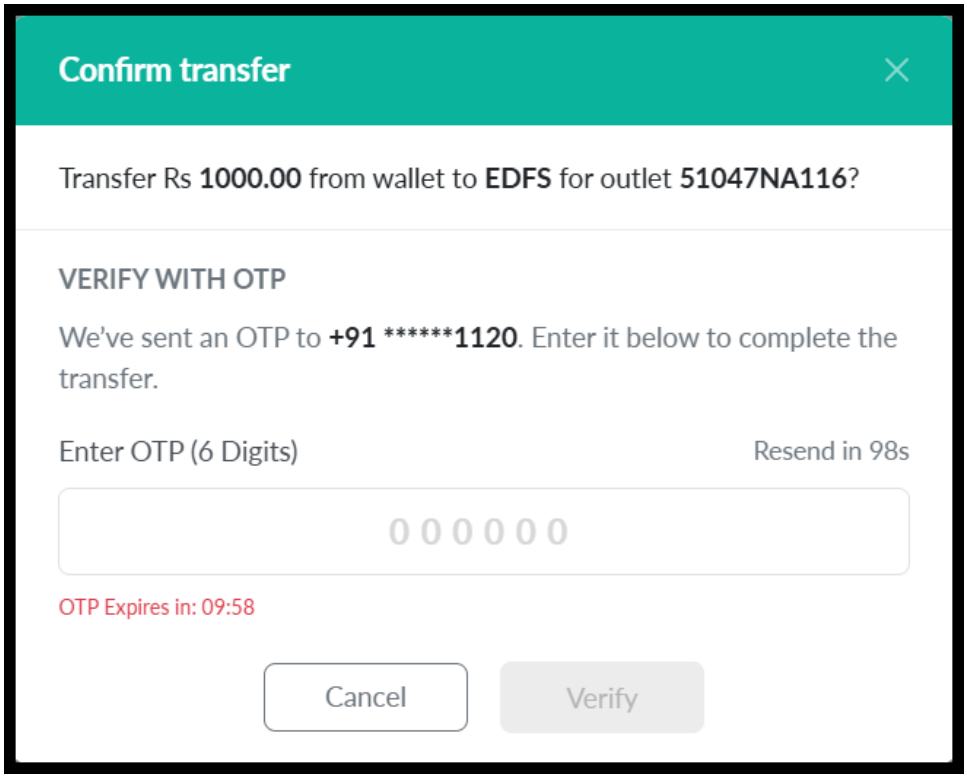

The user can apply filters to find specific transaction details against Wallet, Purchase, or Payment.

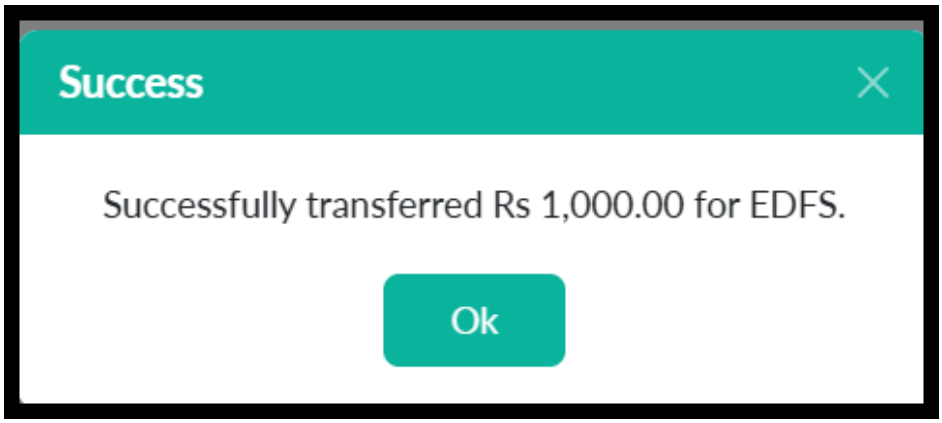

## 1.1 Manage Settlement

Enter the amount, choose whom to transfer to, and click **Transfer**.

Enter the OTP and click **Verify**.

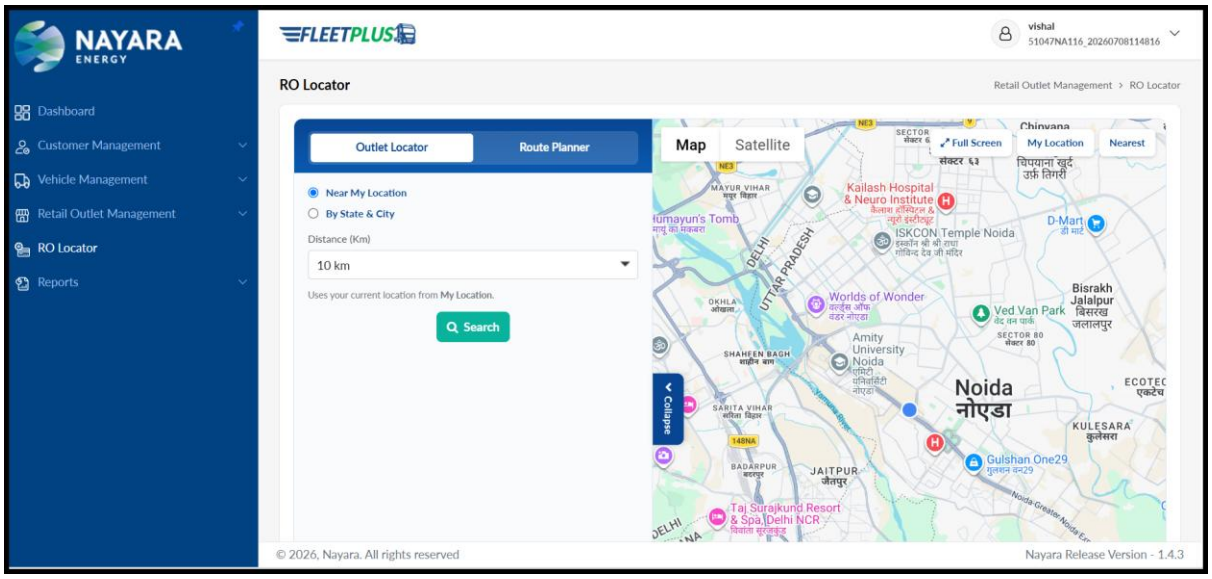

It will then be successfully transferred.

# 2. RO Locator

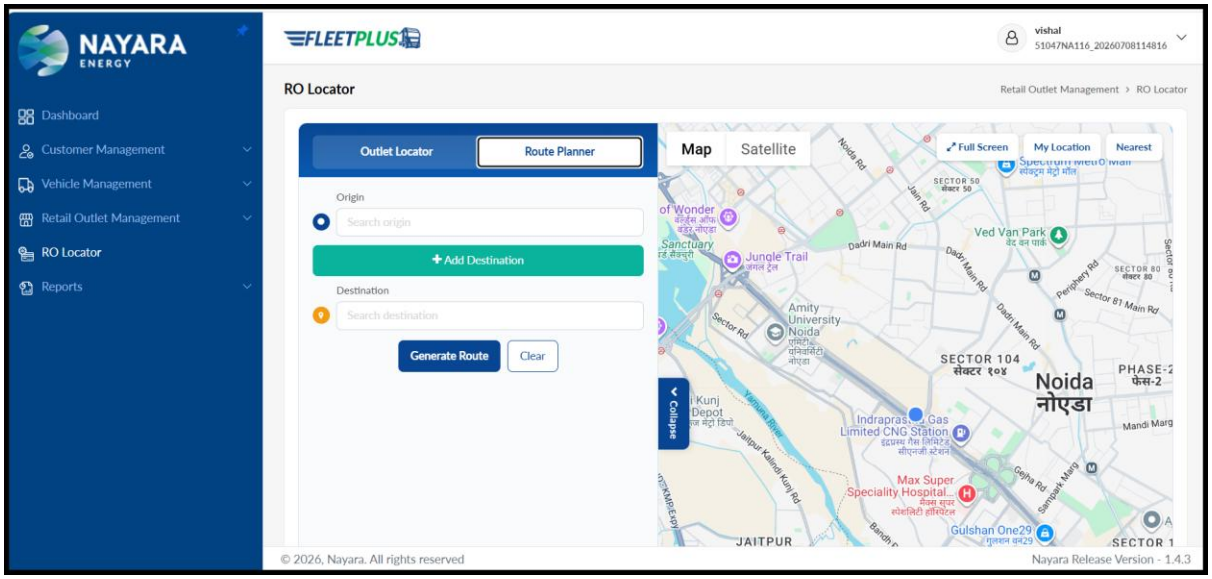

The RO Locator screen helps the admin find Retail Outlets on a map, either near a given location or along a planned route between two points. This page has two modes, available as tabs at the top of the search panel: **Outlet Locator** and **Route Planner**.

## 2.1 Outlet Locator

- "Near My Location" option to search for outlets around the user's current location.
- "By State & City" option to search for outlets by selecting a state and city.
- "Distance (Km)" dropdown to set the search radius (e.g. 10 km).
- A note confirming that the search uses the current location from "My Location".
- "Search" button to fetch and display the matching outlets on the map.

## 2.2 Route Planner

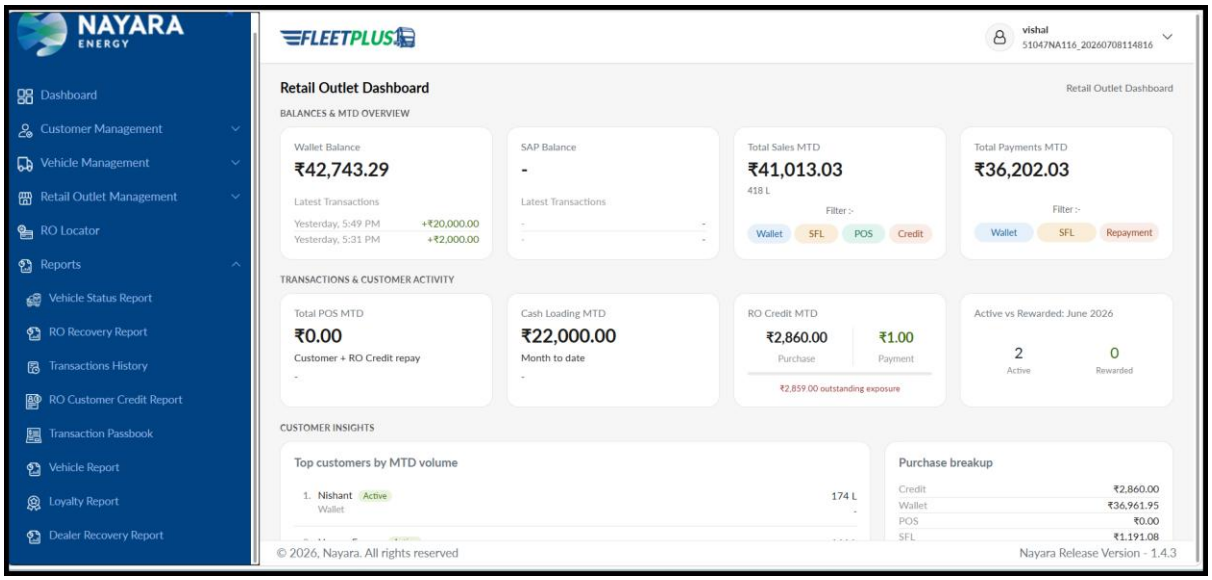

- "Origin" field to search and select the starting location.
- "+ Add Destination" button to add one or more destination points.
- "Destination" field to search and select the destination location.
- "Generate Route" button to plot the route on the map.
- "Clear" button to reset the entered origin and destination.

## 2.3 Map Panel (Common to Both Modes)

- "Map" / "Satellite" toggle to switch between the standard map view and satellite view.
- "Full Screen" button to expand the map to full screen.
- "My Location" button to centre the map on the user's current location.
- "Nearest" button to highlight the nearest outlet(s).
- "Collapse" arrow to hide the left-side search panel for a larger map view.
- Interactive map with pin markers showing the location of retail outlets and nearby landmarks.

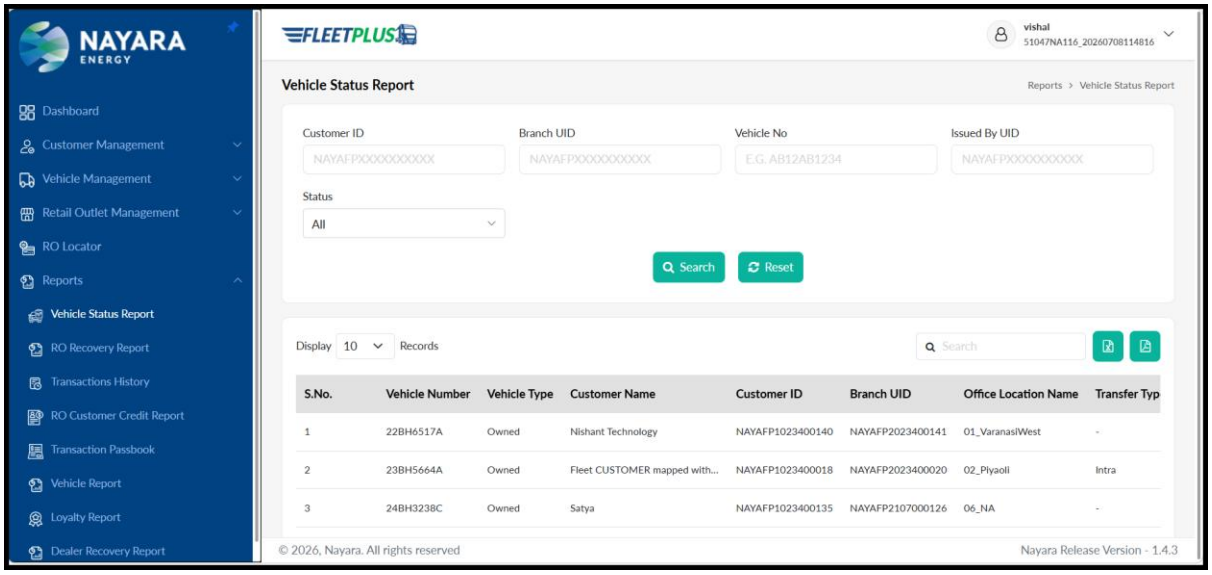

# 3. Reports

The Reports section provides access to various pre-built reports. Select the required report from the left-hand Reports menu to view its records. Each report screen offers date/ID based filters, a data grid, and options to export the results to Excel and PDF.

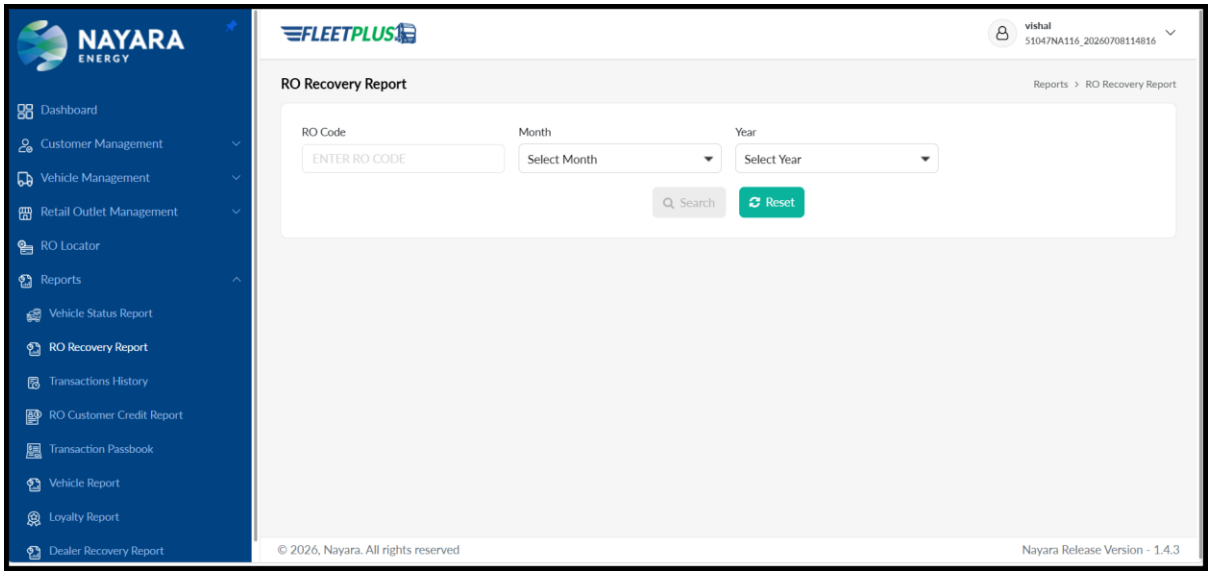

## 3.1 Vehicle Status Reports

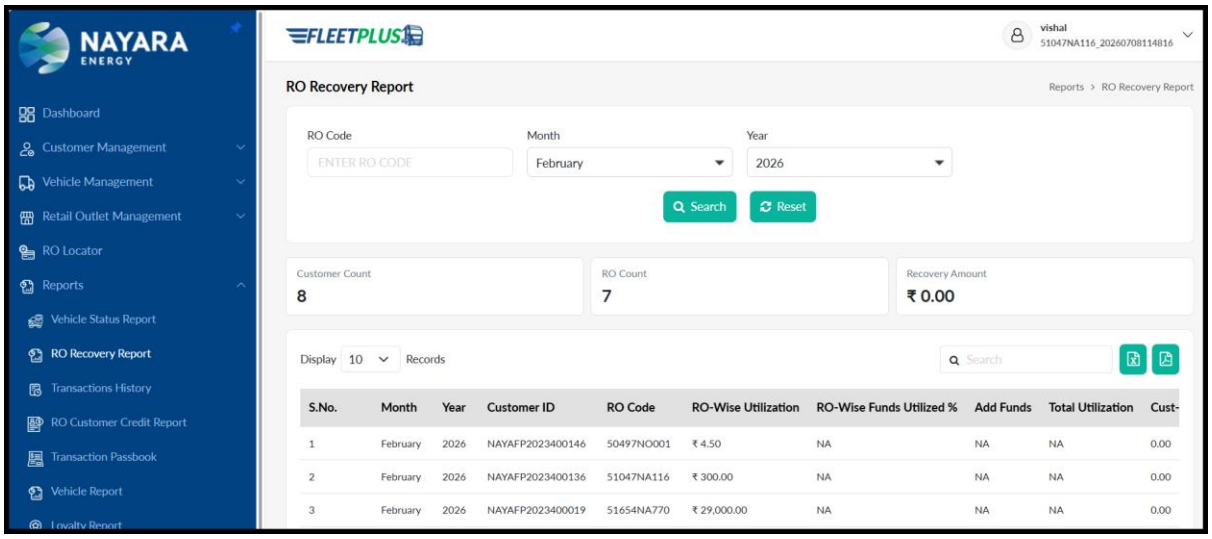

Shows the current status of each vehicle mapped to the customer, such as whether it is Owned or Attached, its branch/office location, and details of any transfer (transfer type and transfer date & time), along with the available quantity against the vehicle.

## 3.2 RO Recovery Report

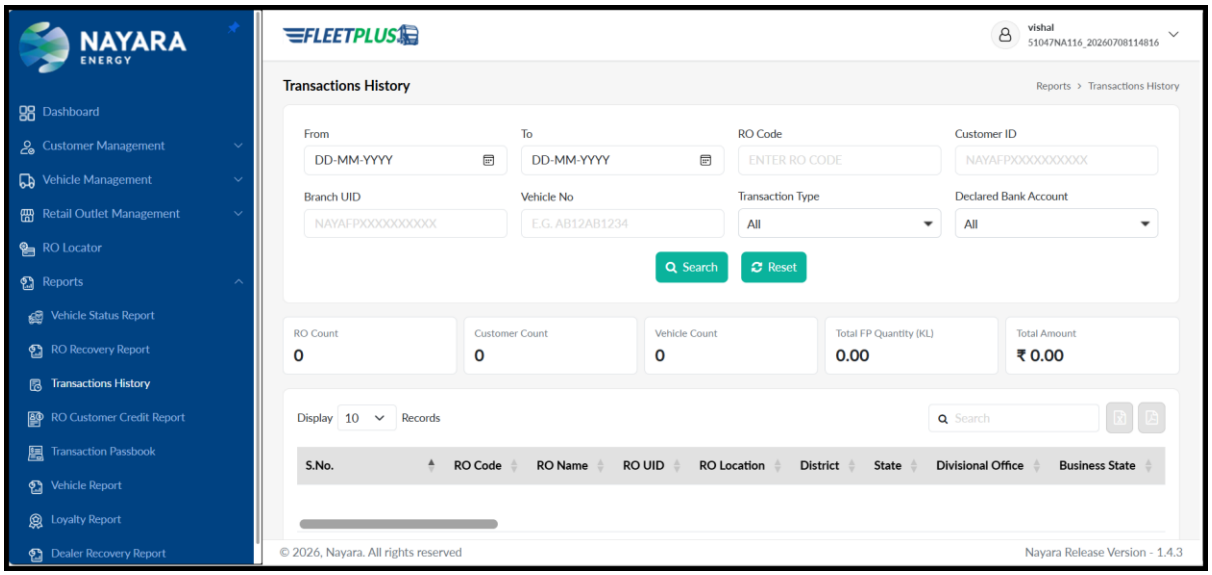

Fill in the data and then search.

The results will be shown in the records section.

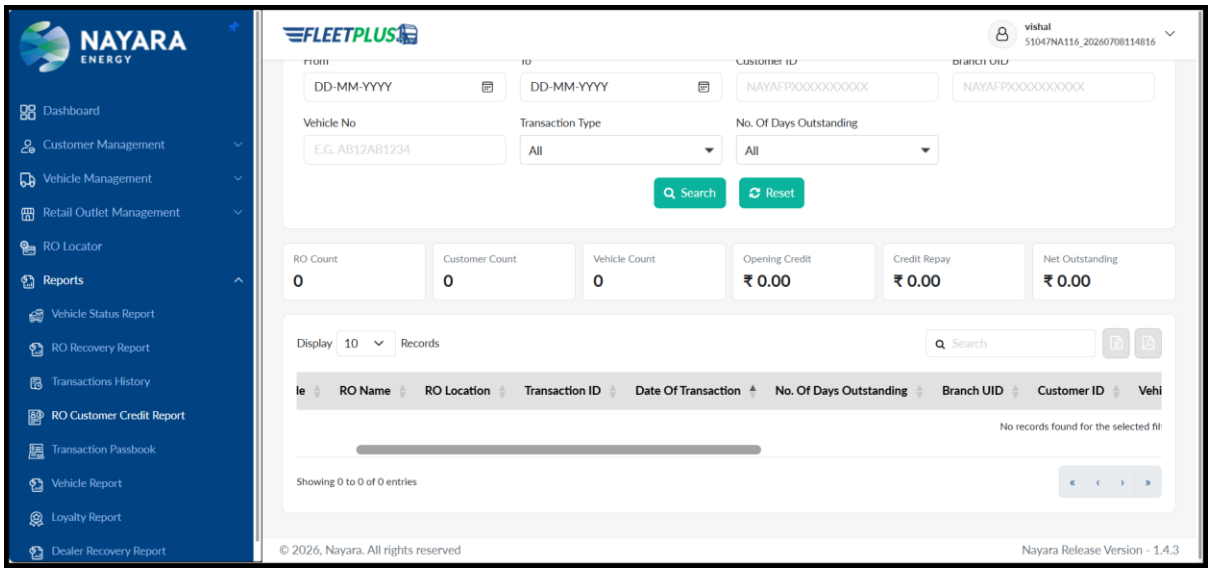

## 3.3 Transaction History

Shows the RO-wise history of transactions, including the RO code, name and location along with the district, state, division, business state, and regional office to which the RO belongs, together with summary counts (RO, customer and vehicle counts) and the total fuel quantity and amount transacted.

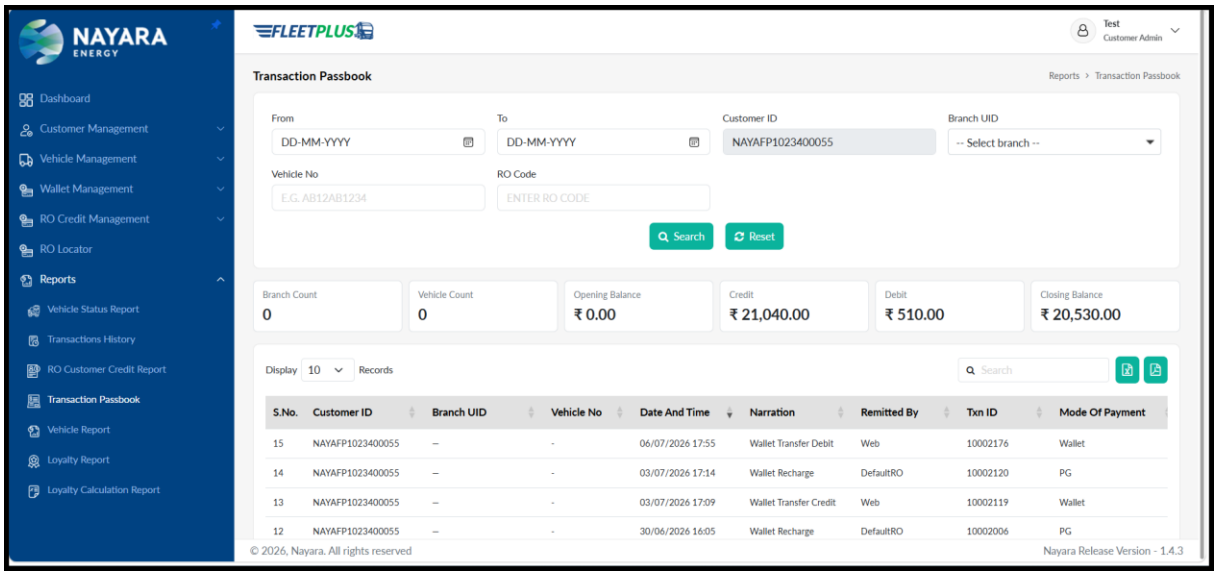

## RO Customer Credit Reports

Shows the credit position of the customer at each RO, including the opening credit, credit repaid, and net outstanding amount, along with the number of days each transaction has been outstanding.

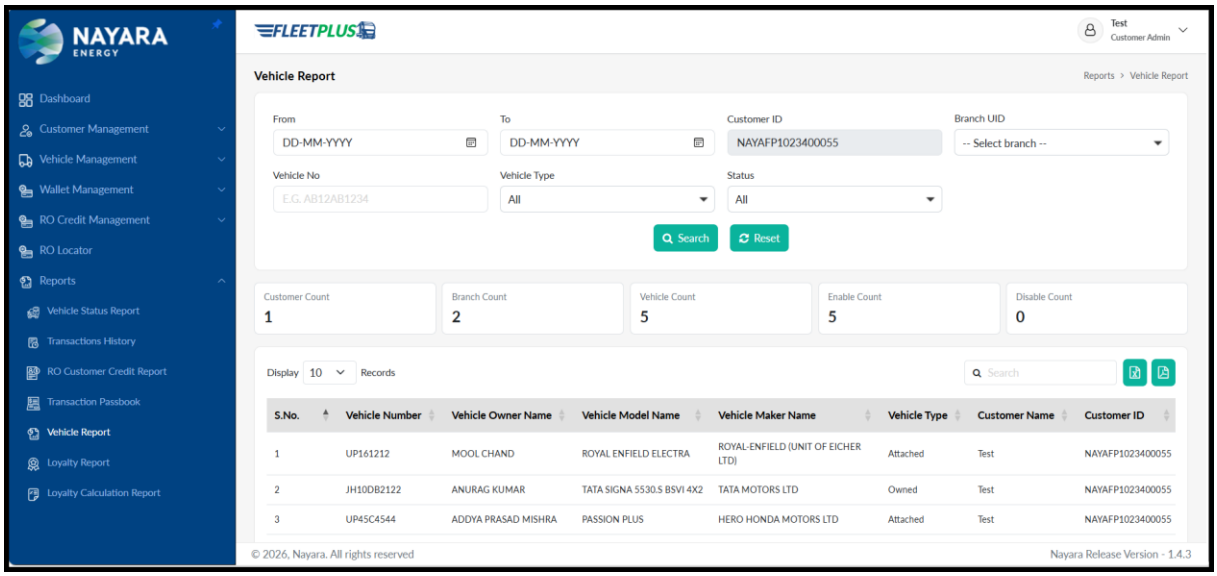

## 3.4 Transaction Passbook

Acts as a passbook of wallet transactions, showing each credit and debit entry with the date and time, narration (e.g. Wallet Recharge, Wallet Transfer Credit/Debit), the transaction ID, mode of payment, and the resulting opening and closing balances.

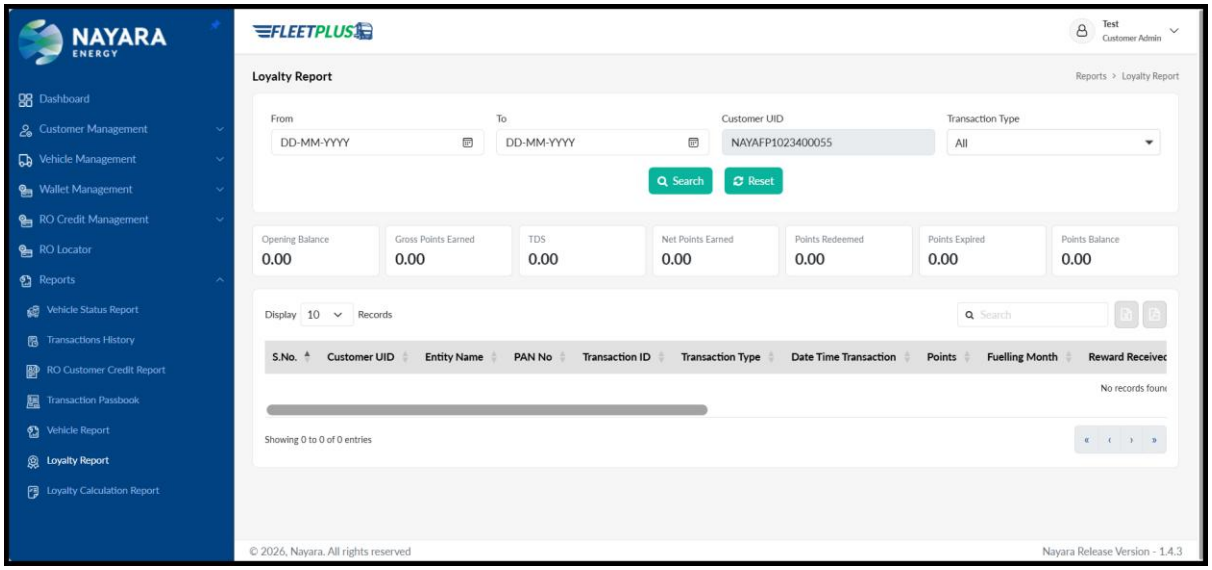

## 3.5 Vehicle Reports

Shows the master list of vehicles registered under the customer, with vehicle number, owner name, model and maker, vehicle type (Owned/Attached), and summary counts of enabled and disabled vehicles.

## 3.6 Loyalty Reports

Shows the loyalty points activity for the customer, including opening balance, gross points earned, TDS, net points earned, points redeemed, points expired, and the closing points balance, along with the underlying transaction-wise entries.

## 3.7 Dealer Recovery Report
